SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q50-Q55):

NEW QUESTION # 50

Which components support semantic enrichment of data in SAP Business Data Cloud?

There are 2 correct answers to this question.

Response:

- A. Calculated Measures
- B. Data Marketplace
- C. Business Builder
- D. Data Monitor

Answer: A,C

NEW QUESTION # 51

What is the main storage type of the object store in SAP Business Data Cloud?

- A. SAP HANA extended tables
- B. SAP BW/4HANA InfoObjects
- C. SAP HANA data lake files
- D. SAP BW/4HANA DataStore objects (advanced)

Answer: C

Explanation:

The primary storage type for the object store within the SAP Business Data Cloud (BDC) architecture is SAP HANA data lake files. SAP BDC is designed to handle vast amounts of diverse data, including semi-structured and unstructured data, which is efficiently stored in a data lake. The SAP HANA data lake, specifically its file storage component, provides a highly scalable and cost-effective solution for retaining raw, historical, and detailed data. This contrasts with traditional relational databases (like SAP HANA extended tables) or data warehousing constructs (like BW/4HANA DataStore objects or InfoObjects), which are optimized for structured, aggregated data and specific query patterns. The object store's reliance on data lake files in BDC underscores its capability to manage enterprise-wide data regardless of its structure, making it suitable for a wide range of analytical workloads, including those involving machine learning and advanced analytics where raw data access is crucial.

Answer: C

NEW QUESTION # 54

Related to data management, what are some capabilities of SAP Business Data Cloud? Note: There are 2 correct answers to this question.

- A. Harmonize customer business data across different Line of Business applications
- B. Delegate the integration of business data to partners and customers.
- C. Integrate and enrich customer business data for different analytics use cases.
- D. Store customer business data in 3rd party hyperscaler environments.

Answer: A,C

Explanation:

SAP Business Data Cloud (BDC) offers significant capabilities in data management, primarily focusing on creating a unified and actionable data foundation. Two key capabilities are to integrate and enrich customer business data for different analytics use cases. BDC pulls data from various SAP and non-SAP sources, allowing for consolidation and enhancement of this data to provide a comprehensive view for analytical purposes. This includes applying business context and semantic richness. Secondly, a critical capability is to harmonize customer business data across different Line of Business applications. BDC addresses the challenge of disparate data silos by creating a consistent data model and definitions across various operational systems (e.g., ERP, CRM, HR), ensuring that data is understood and used uniformly across the enterprise. While BDC leverages hyperscaler environments, "storing data" is a characteristic of its infrastructure, not a direct capability of data management provided by BDC itself. Delegating integration is an operational choice, not a core capability of the platform.
