VMware Advanced VMware Cloud Foundation 9.0 Operation Sample Questions (Q14-Q19):

NEW QUESTION # 14

An operator needs to configure a "Bind User" account for the Active Directory integration. This account is used by VCF Operations

to search the directory for users and groups.

What is the recommended permission level for this Service Account?

- A. Read-Only (Standard User) permissions on the specific Organization Units (OUs) containing the Users and Groups to be imported.
- B. Local Administrator on the VCF Operations appliance.
- C. Domain Administrator, to ensure it can read all attributes including password hashes.
- D. Schema Admin, to allow VCF Operations to extend the AD schema for custom attributes.

Answer: A

NEW QUESTION # 15

Which communication protocol does the Log Insight Importer use to transmit data to the server?

- A. NFS.
- B. SCP.
- C. FTP.
- D. CFAPI (Common Forwarding API). Just like the Log Insight Agent, the Importer uses the efficient, batch-oriented CFAPI (typically port 9000 or 9543/SSL) to send parsed events to the ingestion pipeline.

Answer: D

NEW QUESTION # 16

An administrator creates a new Webhook notification to post alerts to a proprietary ticketing system.

The ticketing system requires the alert severity to be passed in a field named "ticket_priority" instead of the default "criticality".

How can the administrator achieve this customization?

- A. It is not possible; the JSON structure is hardcoded.
- B. Edit the Payload in the Webhook configuration. VCF Operations for Logs allows the administrator to fully customize the HTTP POST body (JSON/XML). The administrator can map the internal variable `#{Criticality}` to the required custom key "ticket_priority".
- C. Use a middleware server to translate the JSON.
- D. Edit the source code of the Log Insight Agent.

Answer: B

NEW QUESTION # 17

In the Interactive Analytics "Visual Chart" (the bar chart at the top), an analyst clicks on a specific colored bar segment representing "Error" events.

What is the immediate effect on the query filters?

- A. It highlights the bar but does nothing to the data below.
- B. It opens the event in a new tab.
- C. It deletes the logs.
- D. It automatically adds a filter to the current query corresponding to the clicked segment (e.g., adds `event_type = Error` or the specific time range of that bar), effectively "Drilling Down" into that specific subset of data.

Answer: D

NEW QUESTION # 18

An operator attempts to add a new Cloud Proxy to an existing Collector Group but receives an error: "Incompatible Version".

Inventory

Collector Group: Ver 8.10.1 (Contains 2 Proxies)

New Proxy: Ver 8.12.0

What is the root cause and resolution?

- A. The new Proxy is too new; Collector Groups only support "Standard" editions, not "Advanced".
- B. The Collector Group is locked; the operator must "Unlock" it in the Global Settings.
- C. All Cloud Proxies in a Collector Group must be at the exact same version (and usually match the Analytics Cluster version). The operator must upgrade the existing group members (or downgrade the new one, though typically upgrading the cluster/group is the path) to match before adding.
- D. The new Proxy has a different IP subnet, which is not allowed.

Answer: C

NEW QUESTION # 19
