

Free PDF Useful Salesforce - Plat-Dev-210 - Salesforce Certified Omnistudio Developer Valid Test Sample

You can choose one of version of our Plat-Dev-210 study guide as you like. There are three versions of our Plat-Dev-210 exam dumps. All of the content are the absolute same, just in different ways to use. Therefore, you do not worry about that you get false information of Plat-Dev-210 Guide materials. According to personal preference and budget choice, choosing the right goods to join the shopping cart. Then you can pay for it and download it right away.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	• Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.
Topic 2	• Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
Topic 3	• Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.

Topic 4	• Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.

Valid Dumps Plat-Dev-210 Free, Real Plat-Dev-210 Dumps Free

There are a lot of excellent experts and professors in our company. In the past years, these experts and professors have tried their best to design the Plat-Dev-210 exam questions for all customers. More importantly, we believe once you finally gain the Plat-Dev-210 certification with our Plat-Dev-210 exam questions and you will find enormous benefits: more enjoyment of life and better relationships and less stress and a better quality of life overall. So it is very significant for you to do everything in your power to pass the Plat-Dev-210 Exam and get the related certification.

Salesforce Certified Omnistudio Developer Sample Questions (Q40-Q45):

NEW QUESTION # 40

A developer needs to transform contact data into a JSON array.

Given the input JSON shown above, what are two ways a developer could configure a DATA Raptor transform to achieve the expected Output JSON? Choose 2 answers

- A. Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab.
- B. Set the input JSON Path as Contact and the OutPut JSON Path as List (Contact)
- C. Set the Input JSON Path as Contact the out JSON Path as Contact and the output Data type as List.
- D. Set the Input JSON path as List(Contact) and the Output JSON Path as Contact.

Answer: A,C

Explanation:

A DataRaptor Transform can be used to transform data from one format to another, such as JSON, XML, or CSV. The developer can specify the input and output paths for each field in the Transform tab. The developer can also use formulas to manipulate data in the Formula tab1. To transform contact data into a JSON array, the developer can use either of these methods:

* Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab. This will create a list of contact objects from the input JSON and output it as a JSON array.

* Set the Input JSON Path as Contact, the Output JSON Path as Contact, and the Output Data Type as List. This will output each contact object as an element of a JSON array.

NEW QUESTION # 41

Which two fields in an Integration Procedure or Data Mapper can execute a function like CONCAT or DATEDIFF?

Choose 2 answers

- A. In a Data Mapper in an Output Tab Output JSON Path
- B. In a Data Mapper Action in an Input Parameters value field
- C. In a Remote Action in an Additional Output value field
- D. In a Set Values Action in a Value field

Answer: B,D

Explanation:

Functions like CONCAT, DATEDIFF, and IF are supported in value fields where expressions can be parsed at runtime.

* B. In a Set Values Action in a Value field - Correct. The Set Values element supports expression functions in its Value field, allowing for real-time evaluation during IP execution.

* C. In a Data Mapper Action in an Input Parameters value field - Correct. Input Parameters to DataRaptors in Integration Procedures can use expression logic to dynamically compute and pass values.

Incorrect Options:

- * A. Output JSON Path in DataRaptor is for structural mapping, not function execution.
- * D. Remote Action Output fields typically receive data, not compute it.

Salesforce OmniStudio Developer Guide # Expression Functions in Integration Procedures

NEW QUESTION # 42

Refer to the exhibit below. In this integration production structure, what Send JSON Path would be used to send the Output of the Action1 element to a Remote Action?

□

- A. Action1. BlockB. Block A
- **B. Action1: BlockB. Block A**
- C. BlockB:BlockB. Action1
- D. BlockA: BlockB. Action 1

Answer: B

Explanation:

The correct syntax for the Send JSON Path is ActionName: BlockName, where ActionName is the name of the action element and BlockName is the name of the block element that contains the output data. The other options are either missing the colon or using incorrect names.

NEW QUESTION # 43

A developer examines data received from an external data source. The data is nested two levels down in the JSON structure. Which OmniStudio tool could the developer use to simplify this data?

- A. Guided Workflow
- **B. Integration Procedure**
- C. Data Mapper Transform
- D. HTTP Action Element

Answer: B

Explanation:

According to Salesforce OmniStudio Integration Procedures documentation, when working with deeply nested JSON, Integration Procedures are ideal. They allow developers to flatten and manipulate JSON data, especially when handling external responses.

* C. Integration Procedure - This is correct. IPs provide Response Transformers, DataRaptor Transforms, and Response Actions to reshape and simplify nested data structures for consumption by front-end components.

Incorrect Options:

- * A. DataRaptor Transform is used inside IPs but cannot directly handle external HTTP calls or manage complex orchestration.
- * B. HTTP Action Element is used inside an Integration Procedure, but by itself, it does not process or simplify the data.
- * D. Guided Workflow is not a recognized OmniStudio component for data transformation.

OmniStudio Integration Procedures Guide # Handling Nested JSON

NEW QUESTION # 44

On a FlexCard canvas, several fields display with Salesforce data, but one of the fields shows only the label. What could cause this?

- A. In the Setup Pabel, {recordId} is misspelled in the Data Source Input Map.
- B. In the FlexCard state, the Field type for the field does not match the type in the Salesforce record.
- **C. The field name in the FlexCard state does not match the DataRaptorExtract's Output JSON Path name.**
- D. There are No test Data test Parameters configured.

Answer: C

Explanation:

According to the FlexCard Designer Overview page, one possible cause of a field showing only the label is that "the field name in the
