## Zscaler ZDTA認定試験に対する効率のあがる勉強法

ZDTA試験に合格して証明書を取得する方法に関する質問を検討していますか? 最良の答えは、ZDTAクイズトレントをダウンロードして学習することです。ZDTA試験の質問は、必要なものを短時間で取得するのに役立ちます。ZDTAトレーニング準備を購入した後、CertShikenダウンロードしてインストールするのに少し時間が必要です。その後、学習するのに約20~30時間かかります。ZDTA試験ガイドをご覧ください、貴重な時間を割いていただければ幸いです。

## Zscaler ZDTA 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"><li>Zscaler Zero Trust Automation: This part measures Automation Engineers on their ability to utilize Zscaler APIs, including the One API framework, for automating zero trust security functions and integrating with broader enterprise security and orchestration tools.</li></ul>
トピック 2	<ul style="list-style-type: none"><li>Connectivity Services: This domain evaluates Network Security Engineers on configuring and managing connectivity essentials like device posture assessment, trusted network definitions, browser access controls, and TLS</li><li>SSL inspection deployment. It also includes applying policy frameworks focused on authentication and enforcement for internet access, private access, and digital experience.</li></ul>

トピック 3	<ul style="list-style-type: none"> <li>• Cyberthreat Protection Services: This domain targets Cybersecurity Analysts and covers broad cybersecurity fundamentals and advanced threat protection capabilities. Candidates must know about malware protection, intrusion prevention systems, command and control channel detection, deception technologies, identity threat detection and response, browser isolation, and incident detection and response.   Data Protection Services</li> </ul>
トピック 4	<ul style="list-style-type: none"> <li>• Platform Services: This section measures skills of Cloud Infrastructure Engineers and focuses on the suite of Zscaler platform services. Key topics include advanced device posture assessments, TLS inspection mechanics, and the application of policy frameworks governing internet, private access, and digital experience services.</li> </ul>
トピック 5	<ul style="list-style-type: none"> <li>• This section assesses Data Protection Officers on techniques to secure data across motion, SaaS, cloud, and endpoints using Zscaler's AI-driven data discovery and data protection technologies. It involves securing BYOD environments and understanding risk management to protect sensitive information.</li> </ul>

## Zscaler Digital Transformation Administrator 認定 ZDTA 試験問題 (Q31-Q36):

### 質問 # 31

Which of the following is unrelated to the properties of 'Trusted Networks'?

- A. Org ID
- B. Network Range
- C. Default Gateway
- D. DNS Server

正解: A

解説:

Trusted Networks in Zscaler are defined using network-specific parameters such as DNS Server, Default Gateway, and Network Range, which are used to identify known internal networks. These properties help Zscaler Client Connector recognize when a device is on a corporate network. Org ID, however, is unrelated to the network characteristics and is instead associated with tenant identification in Zscaler's cloud infrastructure.

### 質問 # 32

When configuring Applications to be monitored, what probe types can be created?

- A. Page Fetch Time Probe and Cloud Path Probe
- B. Page Fetch Time Probe and Server Response time Probe
- C. Web Probe and Page Fetch Time Probe
- D. Web Probe and Cloud Path Probe

正解: D

解説:

When you set up application monitoring in ZDX, you can create Web Probes to measure application performance from the browser and Cloud Path Probes to map and monitor the network path to those applications.

### 質問 # 33

Which of the following components is installed on an endpoint to connect users to the Zero Trust Exchange regardless of their location - home, work, while traveling, etc.?

- A. Private Service Edge
- B. App Connector
- C. IPSec/GRE Tunnel

- D. Client connector

正解: D

解説:

The Zscaler Client Connector is the lightweight agent installed on endpoints - whether at home, in the office, or on the road - to securely forward user traffic into the Zero Trust Exchange.

質問 # 34

How does a Zscaler administrator troubleshoot a certificate pinned application?

- A. They could inspect the ZIA Web Policy.
- B. They could look into the SaaS application analytics tab.
- C. They could look at SSL logs for a failed client handshake.
- D. They could reboot the endpoint device.

正解: C

解説:

Certificate pinning prevents SSL interception by validating a server's certificate against known values. When ZIA performs SSL inspection, it substitutes the certificate with one signed by Zscaler's CA. This causes the handshake to fail for pinned applications. To troubleshoot, an administrator should review SSL logs to identify handshake failures, which indicate certificate pinning issues. Logs will show the TLS negotiation details, including any disruptions.

質問 # 35

What does Advanced Threat Protection defend users from?

- A. Command injection attacks
- B. Large iFrames
- C. Vulnerable JavaScripts
- D. Malicious active content

正解: D

解説:

Advanced Threat Protection (ATP) defends users from malicious active content, which includes malware, exploit kits, malicious scripts, and other forms of active content designed to compromise user systems. ATP employs multiple techniques such as sandboxing, malware scanning, and threat intelligence to detect and block these threats before they reach the user.

質問 # 36
