There is no doubt they are clear-cut and easy to understand to fulfill your any confusion about the exam. Our Docker Certified Associate (DCA) Exam exam question is applicable to all kinds of exam candidates who eager to pass the exam. Last but not the least, they help our company develop brand image as well as help a great deal of exam candidates pass the exam with passing rate over 98 percent of our DCA real exam materials. Considering many exam candidates are in a state of anguished mood to prepare for the Docker Certified Associate (DCA) Exam exam, our company made three versions of DCA Real Exam materials to offer help. All these variants due to our customer-oriented tenets. As a responsible company over ten years, we are trustworthy. In the competitive economy, this company cannot remain in the business for long.

Docker Certified Associate (DCA) certification exam covers a broad range of topics related to Docker technologies and tools. DCA exam evaluates your understanding of Docker architecture, installation, configuration, and administration. Additionally, it assesses your skills in container orchestration using Docker Swarm and Kubernetes, Docker networking, storage, security, and troubleshooting. The DCA certification exam is a practical and hands-on exam that requires you to demonstrate your proficiency in Docker technologies and tools.

The DCA Exam covers a range of topics related to Docker, including containerization, orchestration, networking, security, and storage. DCA exam is designed to test the candidate's ability to work with Docker in real-world scenarios, and it includes both multiple-choice and interactive tasks. DCA exam is computer-based and can be taken online from anywhere in the world, making it accessible to candidates from all backgrounds and locations.

Pass Guaranteed DCA - Docker Certified Associate (DCA) Exam Perfect Discount

By taking a DCA practice exam, you can find out what you're good at. DCA exam preparation software is the best way to prepare for your DCA certification exam. With the DCA list of questions, you can brush up on your skills and knowledge. With PassReview, you'll access a lot of DCA Practice Questions, detailed explanations, and personalized feedback. And because it's all online, you can study anywhere, anytime. The Docker Certified Associate (DCA) Exam (DCA) practice exam consists of questions from a pool of questions.

To take the DCA exam, candidates must have a good understanding of Docker technologies, including Docker Engine, Docker Compose, Docker Swarm, and Docker Content Trust. They should also be familiar with containerization and associated technologies like Kubernetes, as well as container orchestration and management. DCA Exam consists of 55 multiple-choice questions and lasts for 90 minutes.

Docker Certified Associate (DCA) Exam Sample Questions (Q160-Q165):

NEW QUESTION # 160

A company's security policy specifies that development and production containers must run on separate nodes in a given Swarm cluster. Can this be used to schedule containers to meet the security policy requirements?

Solution. label constraints

- A. No
- **B. Yes**

Answer: B

Explanation:

Label constraints can be used to schedule containers to meet the security policy requirements. Label constraints are a way to specify which nodes a service can run on based on the labels assigned to the nodes.

Labels are key-value pairs that can be attached to any node in the swarm. For example, you can label nodes as development or production depending on their intended use. Then, you can use the --constraint option when creating or updating a service to filter the nodes based on their labels. For example, to run a service only on development nodes, you can use:

```
docker service create --constraint 'node.labels.environment == development' ...
```

To run a service only on production nodes, you can use:

```
docker service create --constraint 'node.labels.environment == production' ...
```

This way, you can ensure that development and production containers run on separate nodes in the swarm, as required by the security policy. References:

NEW QUESTION # 161

Is this the purpose of Docker Content Trust?

Solution. Indicate an image on Docker Hub is an official image.

- A. Yes
- **B. No**

Answer: B

Explanation:

The purpose of Docker Content Trust is not to indicate an image on Docker Hub is an official image. Docker Content Trust is a feature that allows users to verify the integrity and publisher of container images they pull or deploy from a registry server, signed on a Notary server¹. Docker Content Trust uses digital signatures to ensure that the images are authentic and have not been tampered with². Official images are a curated set of Docker repositories that are designed to be the best starting point for most users³. They are not necessarily signed by Docker Content Trust, although some of them are. To indicate an image on Docker Hub is an official image, you can look for the blue "official image" badge on the image page. Reference:

NEW QUESTION # 162

Does this describe the role of Control Groups (cgroups) when used with a Docker container?

Solution: user authorization to the Docker API

- A. Yes
- **B. No**

Answer: B

Explanation:

Explanation

This does not describe the role of Control Groups (cgroups) when used with a Docker container, because user authorization to the Docker API is not related to cgroups. According to the official documentation, cgroups are a Linux kernel feature that limits and isolates the resource usage of a group of processes, such as CPU, memory, disk I/O, network, etc. Docker can use cgroups to share available hardware resources to containers and optionally enforce limits and constraints.

NEW QUESTION # 163

Which statement is true about DTR garbage collection?

- A. Garbage collection removes exited containers from cluster nodes.
- B. Garbage collection removes unused volumes from cluster nodes
- C. Garbage collection removes unreferenced image layers from DTR's backend storage.
- D. Garbage collection removes DTR images that are older than a configurable of days

Answer: C

NEW QUESTION # 164

Will this action upgrade Docker Engine CE to Docker Engine EE?

Solution: Delete '/var/lib/docker' directory.

- A. Yes
- B. No

Answer: B

Explanation:

Explanation

Deleting the /var/lib/docker directory will not upgrade Docker Engine CE to Docker Engine EE. It will only remove all the data stored by Docker, such as images, containers, volumes, and networks. This can cause data loss and disrupt the running services. To upgrade from Docker Engine CE to Docker Engine EE, you need to follow the official instructions from Docker, which involve uninstalling the CE package and installing the EE package. You also need to have a valid license to use Docker Engine EE.
