Don't waste your resources on outdated material - trust our platform to provide you with the actual and updated Salesforce Sharing-and-Visibility-Architect Practice Questions you need to succeed.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q14-Q19):

NEW QUESTION # 14

Universal Containers has developed Apex code to manually create AccountShare records to grant specific users access to individual Accounts. What must the Architect do to ensure the AccountShare records are not deleted when the owner of the Account is changed?

- A. Create the share records and set the RowCause to a custom Apex Sharing Reason
- B. Create the share records and set the RowCause to Manual
- C. Create the share records in a class with the "Without Sharing" keyword
- D. Create the share records with the Delete on Owner Change field set to false

Answer: A

Explanation:

Explanation

According to this source, creating the share records and setting the RowCause to a custom Apex Sharing Reason will prevent them from being deleted when the owner of the account is changed. The other options will not have this effect.

NEW QUESTION # 15

The System Administrator at Universal Containers has created two list views called ListV1 and ListV2. One group of users should only see ListV1 and the second group of users should only see ListV2. Two public groups were created to restrict visibility to the respective list views. However, users in both groups are able to see both list views. What system permission in their profile enabled the users to see all list views?

- A. Manage Public List Views
- B. Manage Private List Views
- C. Manage Custom List Views
- D. Manage Custom Permissions

Answer: A

Explanation:

Explanation

The system permission in their profile that enabled the users to see all list views is manage public list views.

This permission allows users to create, edit, and delete public list views, as well as view all list views shared with them or with their groups. To restrict visibility to the respective list views, the system administrator should remove this permission from the users' profiles and assign it only to those who need to manage public list views

NEW QUESTION # 16

Universal Containers has a Private Sharing Model for the Opportunity object. Sales Rep A at Universal Containers created the Opportunity record and then transferred ownership of the Opportunity record to Sales Rep B.

Both Sales Rep A and B have the same role in the Role Hierarchy.

What access will Sales Rep A have to the Opportunity after the transfer?

- A. Read/Write
- B. No Access
- C. Read Only
- D. Full Access

Answer: B

NEW QUESTION # 17

Universal Containers has implemented a community for its customers using the Customer Community sense type. They have implemented a custom object to store service requests that has a look up to the account record. The Organization Wide Default External Access for the service request object is set to Private. Universal Containers wants their customers to be able to see service requests for their account through the community Customers should not see service requests for other accounts. What Salesforce feature can the Architect use to implement this?

- A. Use Apex Managed Sharing to share service requests related to the account to the appropriate community users.
- B. Use manual sharing to share the service requests manually when a new community user is added.
- C. Use a Sharing Rule to share service requests to the community user based on their role.
- D. Use a Sharing Set to share service requests related to the account based on the community user's profile.

Answer: D

NEW QUESTION # 18

Sales reps at Universal Containers (UC) complain about the manual activities they need to perform in order to grant access to supporting internal users (legal, engineering, finance, and so forth) for customer records when they need help. In general, the sales reps involved in the deals will not change.

How can a Salesforce architect help IK to Improve sales reps productivity?

- A. Leverage default Account team
- B. Create a permission set with "view all data" and assign to supporting users.
- C. Create a public group and replace the account ownership with it.
- D. Create a criteria-based sharing rule to grant access to other users.

Answer: A

Explanation:

Explanation

Leveraging default Account team is the best way to help improve sales reps productivity by granting access to supporting internal users for customer records when they need help. Default Account teams are predefined groups of users who work together on an account. When a user creates or owns an account, Salesforce automatically adds the default Account team to the account team related list on the account2. Creating a permission set with "view all data" and assigning it to supporting users would give them too much access to data that they may not need. Creating a public group and replacing the account ownership with it would not be feasible or scalable. Creating a criteria-based sharing rule to grant access to other users would require manual maintenance and may not reflect the changes in the account team.

NEW QUESTION # 19

.....

Selecting the right method will save your time and money.
