

Top AZ-801 Reliable Dumps | Valid New AZ-801 Test Labs: Configuring Windows Server Hybrid Advanced Services

What's more, part of that Actualtests4sure AZ-801 dumps now are free: <https://drive.google.com/open?id=1q5LrT2JTfm9BJSyUdBIWHPXdqu2UIIP5>

To save you from the loss of time and money, Actualtests4sure is offering Microsoft AZ-801 Questions. It is a promise that these AZ-801 dumps will help you clear the certification test with distinction in one go. Actualtests4sure solves the issue of not finding the latest and actual Configuring Windows Server Hybrid Advanced Services (AZ-801) questions. Remember that the competition is very tough. To survive in this situation, you must prepare with the most probable AZ-801 exam dumps of Actualtests4sure.

To prepare for the exam, candidates need to have a deep understanding of Windows Server administration and Azure services. They also need to be familiar with PowerShell scripting, network configuration, and security protocols. Candidates should also have experience in deploying and managing virtual machines, containers, and storage solutions. Microsoft recommends that candidates take the AZ-104 (Microsoft Azure Administrator) certification exam before attempting the AZ-801 Exam.

New AZ-801 Test Labs - AZ-801 Frenquent Update

The AZ-801 practice questions at Actualtests4sure AZ-801 cover all the key topics and areas of knowledge necessary to get success on the first try. The product of Actualtests4sure is designed by professionals and is regularly updated to reflect the latest changes in the content. The Actualtests4sure recognizes that students may have different learning styles and preferences. Therefore, the Actualtests4sure offers PDF format, desktop practice exam software, and AZ-801 Exam Questions to help customers prepare for the AZ-801 exam successfully.

The Microsoft AZ-801 Exam consists of various topics related to hybrid advanced services, such as implementing Azure Active Directory, managing Azure AD identities and roles, implementing and managing virtual networking, implementing and managing hybrid network connectivity, implementing and managing advanced virtualization, and managing hybrid workloads. Candidates are expected to have a deep understanding of these topics and be able to apply them in real-world scenarios.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q316-Q321):

NEW QUESTION # 316

Hotspot Question

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains servers that run Windows Server as shown in the following table.

Name	IP address
Server1	172.16.10.10
Server2	172.16.20.50
Server3	172.16.30.80

Server1 has the connection security rules shown in the following table.

Name	Endpoint 1	Endpoint 2	Authentication mode	Authentication method
Rule11	172.16.10.0/24	172.16.20.50	Require inbound and outbound	Computer (NTLMv2)
Rule12	172.16.10.10	172.16.0.0/16	Request inbound and outbound	Computer (Kerberos V5)

Server2 has the connection security rules shown in the following table.

Name	Endpoint 1	Endpoint 2	Authentication mode	Authentication method
Rule31	Any	Any	Request inbound and outbound	Computer (Kerberos V5)
Rule32	172.16.30.80	172.16.10.10	Require inbound and outbound	Computer (NTLMv2)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements

Server1 can communicate with Server2 successfully.

Yes

☐

No

☐

Server2 can communicate with Server3 successfully.

☐
☐

Server3 can communicate with Server2 successfully.

☐
☐

Answer:

Explanation:

Answer Area

Statements

Server1 can communicate with Server2 successfully.

Yes

☒

No

☐

Server2 can communicate with Server3 successfully.

☐☒

Server3 can communicate with Server2 successfully.

☐☒

NEW QUESTION # 317

You need to implement alerts for the domain controllers. The solution must meet the technical requirements.

What should you do on the domain controllers, and what should you create on Azure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

On the domain controllers:
☒ Create a Data Collector Set in Performance Monitor.
☒ Modify the Performance Monitor Users group.
☒ Install the Azure Monitor agent.

In Azure:
☐ Create an Azure SQL database.
☐ Create a Storage Sync Service.
☒ Create an Azure Log Analytics workspace.
☐ Create an Azure Storage account.

Answer:

Explanation:

On the domain controllers:
☒ Create a Data Collector Set in Performance Monitor.
☒ Modify the Performance Monitor Users group.
☒ Install the Azure Monitor agent.

In Azure:
☐ Create an Azure SQL database.
☐ Create a Storage Sync Service.
☒ Create an Azure Log Analytics workspace.
☐ Create an Azure Storage account.

NEW QUESTION # 318

You have an Azure Active Directory Domain Services (Azure AD DS) domain named aadds.contoso.com.

You have an Azure virtual network named Vnet1. Vnet1 contains two virtual machines named VM1 and VM2 that run Windows Server. VM1 and VM2 are joined to aadds.contoso.com.

You create a new Azure virtual network named Vnet2. You add a new server named VM3 to Vnet2.

When you attempt to join VM3 to aadds.contoso.com, you get an error message that the domain cannot be found. You need to ensure that you can join VM3 to aadds.contoso.com.

Answer Area

Answer:

Explanation:

NEW QUESTION # 319

You have an Azure virtual machine named VM1 that runs Windows Server. VM1 fails to start properly. You need to review the serial log to identify the issue. What should you use from the VM1 blade in the Azure portal?

- A. Resource health
- B. Change tracking
- C. Boot diagnostics
- D. Diagnose and solve problems
- E. Performance diagnostics

Answer: C

NEW QUESTION # 320

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the organizational units (OUs) shown in the following table.

Name	Contents
Domain Controllers	All the domain controllers in the domain
Domain Servers	All the servers that run Windows Server in the domain
Domain Client Computers	All the client computers that run Windows 10 in the domain

Domain Users
In the domain, you create the Group Policy Objects (GPOs) shown in the following table.

Name	IPsec setting
GPO1	Require authentication by using Kerberos V5 for inbound connections
GPO2	Request authentication by using Kerberos V5 for inbound connections
GPO3	Require authentication by using X.509 certificates for inbound connections
GPO4	Request authentication by using X.509 certificates for inbound connections

You need to implement IPsec authentication to ensure that only authenticated computer accounts can connect to the members in the domain. The solution must minimize administrative effort.

Which GPOs should you apply to the Domain Controllers OU and the Domain Servers OU? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Domain Controllers:

☐

☐ GPO1
 ☐ GPO2
 ☐ GPO3
 ☐ GPO4

Domain Servers:

☐

☐ GPO1
 ☐ GPO2
 ☐ GPO3
 ☐ GPO4

Answer:
