SAVIGA-C01 Valid Exam Topics & SAVIGA-C01 Latest Exam Format

Actual4Dumps is one of the leading best platforms that have been offering valid, verified, and updated Saviynt Exam Questions for many years. Over this long time period, countless SAVIGA-C01 exam candidates have passed their SAVIGA-C01 Exam. They all got help from real and valid Actual4Dumps Saviynt IGA Certified Professional Exam (L100) (SAVIGA-C01) practice questions and prepared well for the final Saviynt exam.

Saviynt IGA Certified Professional Exam (L100) Sample Questions (Q58-Q63):

NEW QUESTION # 58

If you want an application to be available for requesting access (self or other), which of the following should be configured?

- A. Access Add Workflow
- B. Proposed Accounts Workflow
- C. Access Remove Workflow
- D. Emergency Access ID Request Workflow

Answer: A

Explanation:

To make an application available for access requests (either self-service or requests for others), the Access Add Workflow needs to be configured within Saviynt. This workflow defines the process that governs how access to the application is granted. Here's a breakdown with Saviynt IGA references:

* Saviynt's Access Request System (ARS): This is the module within Saviynt that handles access requests. The ARS relies on defined workflows to manage the approval and provisioning process.

* Access Add Workflow: This specific type of workflow within Saviynt's ARS is triggered when a user requests access to an application or entitlement. It dictates the steps involved, such as:

* Requester Details: Capturing information about who is requesting access.

* Application/Entitlement Selection: The user selects the application (and potentially specific roles or entitlements within that application) for which they are requesting access.

* Approval Routing: Defining the approval chain (e.g., manager approval, application owner approval, etc.). This is configured within the workflow using various approval activities.

* Provisioning: Upon approval, the workflow can trigger automated provisioning of access to the target system (if connected integration is set up).

* Saviynt's Application Onboarding: For an application to be available in the ARS, it needs to be onboarded into Saviynt. During this process, you would typically define the relevant entitlements (access rights) associated with the application.

* Workflow Configuration in Saviynt: Saviynt's admin interface allows administrators to create and customize workflows using a visual designer. This includes setting up conditions, defining approval steps, and configuring actions to be taken at each stage of the workflow.

* Other options:

* Proposed Accounts Workflow: This is less common, often used to suggest potential accounts during the request or account creation process. It's not the primary mechanism for making an application available for access requests.

* Access Remove Workflow: This workflow is used when access needs to be revoked, not granted.

* Emergency Access ID Request Workflow: This workflow is specific to requesting temporary, elevated access in emergency situations. It's not the workflow for general access requests to applications.

NEW QUESTION # 59

Match the following SoD Violations status with their description.

Closed

Select a match:

SoD Violations which are assigned

SoD Violations which require immediate attention

SoD Violations which are closed with or without remediation

SoD Violations which have Mitigation Controls applied

Open

Select a match:

SoD Violations which are assigned

SoD Violations which require immediate attention

SoD Violations which are closed with or without remediation

SoD Violations which have Mitigation Controls applied

Risk Accepted

Select a match:

SoD Violations which are assigned

SoD Violations which require immediate attention

SoD Violations which are closed with or without remediation

SoD Violations which have Mitigation Controls applied

In Process

Select a match:

SoD Violations which are assigned

SoD Violations which require immediate attention

SoD Violations which are closed with or without remediation

SoD Violations which have Mitigation Controls applied

Answer:

Explanation:

Closed
Select a match:

- SoD Violations which are assigned
- SoD Violations which require immediate attention
- SoD Violations which are closed with or without remediation
- SoD Violations which have Mitigation Controls applied

Open
Select a match:

- SoD Violations which are assigned
- SoD Violations which require immediate attention
- SoD Violations which are closed with or without remediation
- SoD Violations which have Mitigation Controls applied

Risk Accepted
Select a match:

- SoD Violations which are assigned
- SoD Violations which require immediate attention
- SoD Violations which are closed with or without remediation
- SoD Violations which have Mitigation Controls applied

In Process
Select a match:

- SoD Violations which are assigned
- SoD Violations which require immediate attention
- SoD Violations which are closed with or without remediation
- SoD Violations which have Mitigation Controls applied

Explanation:

- * Closed: SoD Violations which are closed with or without remediation
- * Open: SoD Violations which require immediate attention
- * Risk Accepted: SoD Violations which have Mitigation Controls applied
- * In Process: SoD Violations which are assigned

* Closed: This status implies that the SoD violation has been addressed. It could have been resolved through remediation (e.g., removing conflicting access) or through acceptance after a review process (without direct remediation, perhaps mitigated in another way).

* Open: This status indicates that the SoD violation is active and needs immediate attention to mitigate the associated risk.

* Risk Accepted: This status suggests that the SoD violation has been acknowledged, but instead of being fully remediated, mitigation controls have been put in place to reduce the risk to an acceptable level. This usually follows a formal risk acceptance process.

* In Process: This status means that the SoD violation is currently being worked on. It has likely been assigned to someone for investigation, remediation, or further action.

Therefore, the matches you've made in the image are accurate and reflect standard SoD management practices.

NEW QUESTION # 60

What is a Campaign?

- A. Group of similar Certifications
- B. Group of similar Endpoints
- C. Group of Dashboards
- D. Group of User Groups

Answer: A

Explanation:

In Saviynt, a Campaign is best described as a D. Group of similar Certifications. Here's a breakdown:

* Saviynt's Campaigns and Certifications:

* Campaign: A container that defines the scope, schedule, participants, and other settings for a set of related access certifications.

* Certification: The individual review task assigned to a Certifier (e.g., a manager reviewing their subordinates' access, an application owner reviewing users of their application).

* Analogy: Think of a Campaign as a project, and Certifications as individual tasks within that project.

* Purpose of Campaigns: Campaigns provide a structured way to manage and track access reviews, ensuring that they are conducted regularly and consistently.

* Examples of Campaigns:

* User Manager Campaign: Groups certifications where managers review their subordinates' access.

* Entitlement Owner Campaign: Groups certifications where entitlement owners review who has access to their entitlements.

* Application Owner Campaign: Groups certifications where application owners review who has access to their applications.

* Why Other Options Are Incorrect:

* A. Group of similar Endpoints: Endpoints are systems or applications connected to Saviynt, not the primary grouping within a campaign.

* B. Group of User Groups: User groups are collections of users, not the defining element of a campaign.

* C. Group of Dashboards: Dashboards provide visualizations of data, but they are not the core component of a campaign.

In conclusion: A Campaign in Saviynt is essentially a container for a set of related access certifications, providing a framework for managing and organizing the review process based on specific criteria and objectives.

NEW QUESTION # 61

A Campaign Owner can create various types of a User Manager Campaign to save different settings for various categories of Manager Access Reviews.

- A. Global Configurations
- B. Campaign Types
- C. Campaign Previews
- D. Campaign Templates

Answer: D

Explanation:

To save different settings for various categories of Manager Access Reviews within User Manager Campaigns, a Campaign Owner can create C. Campaign Templates. Here's why:

* Saviynt's Campaign Templates: Templates allow you to pre-configure various settings for a campaign and save them as a reusable template. This includes settings related to:

* Campaign Scope: Defining which users, applications, or entitlements are included.

* Certifier Selection: Specifying the type of certifiers (e.g., Managers, Application Owners).

* Scheduling and Notifications: Setting up the campaign schedule and email notifications.

* Advanced Configurations: Including filters, risk scores, and other advanced settings.

* Multiple Templates for Different Categories: A Campaign Owner can create multiple templates, each tailored to a specific category of Manager Access Review. For example:

* Template 1: For high-risk applications, with stricter filters and more frequent reviews.

* Template 2: For low-risk applications, with broader scope and less frequent reviews.

* Template 3: For specific departments or business units, with customized certifier selection.

* Benefits of Using Templates:

* Consistency: Ensures that similar types of reviews are conducted consistently.

* Efficiency: Saves time by eliminating the need to configure each campaign from scratch.

- * Reduced Errors: Minimizes the risk of manual configuration errors.
 - * Why Other Options Are Less Suitable:
 - * A. Global Configurations: Global configurations apply to all campaigns, not to specific categories of reviews.
 - * B. Campaign Types: Campaign types (e.g., User Manager, Entitlement Owner) define the overall purpose of the campaign, not the specific settings for different categories within a campaign type.
 - * D. Campaign Previews: Previews are for reviewing the campaign data before launch, not for saving different configurations.
- In conclusion: Campaign Templates in Saviynt provide a powerful way to save and reuse different configurations for various categories of Manager Access Reviews, promoting consistency, efficiency, and accuracy in the certification process.

NEW QUESTION # 62

Which of the following statuses is applicable for the "Add Access" task type when the task is successfully completed?

- A. Active
- B. Success
- C. Provisioned
- D. Manually Provisioned

Answer: C

Explanation:

When an "Add Access" task is successfully completed in Saviynt, the applicable status is typically "Provisioned." Here's a detailed explanation with Saviynt references:

- * Saviynt's Task Management: Saviynt uses tasks to track the progress of various operations, including access provisioning. These tasks are generated as part of workflows, such as the "Access Add Workflow."
 - * "Add Access" Task Type: This specific task type is created when the access request is approved and the system is ready to grant the requested access to the target application.
 - * Task Statuses in Saviynt: Saviynt uses different statuses to indicate the current state of a task.
- Common statuses include:
- * Pending: The task is waiting to be processed.
 - * In Progress: The task is currently being executed.
 - * Provisioned: This status signifies that the requested access has been successfully granted to the user in the target system.
 - * Failed: The task encountered an error and could not be completed.
 - * Manually Provisioned: The task was completed manually by an administrator, rather than through automated provisioning.
 - * Success: While sometimes used, this status is less specific than "Provisioned" in the context of "Add Access" tasks, since it does not specify that the action completed was a provisioning action.
 - * Active: Typically applies to accounts or users, not tasks.
 - * Saviynt's Workflow Engine: The workflow engine in Saviynt updates the task status as it progresses through the defined steps. For connected applications, the workflow engine might directly interact with the target system's API to provision the access. Once the provisioning is successful, the status is updated to "Provisioned."
 - * Saviynt's Audit Trails: Saviynt maintains detailed audit trails, and the task status changes are logged.
- This provides a clear record of when access was provisioned for a user.
- * Other Options:
 - * Success: As mentioned above, this is a general status. While technically correct (the task succeeded), "Provisioned" provides more context.
 - * Manually Provisioned: This status is only applicable if an administrator intervened and manually granted the access outside of the automated workflow.
 - * Active: This status typically pertains to a user or account's overall status, not specifically to the completion of an "Add Access" task.

NEW QUESTION # 63

.....

Some people prefer to read paper materials rather than learning on computers. Of course, your wish can be fulfilled in our company. We have PDF version SAVIGA-C01 exam guides, which are printable format. You can print it on papers after you have downloaded it successfully. If you want to change the fonts, sizes or colors, you can transfer the SAVIGA-C01 exam torrent into word format files before printing. There are many advantages of the PDF version. Firstly, there are no restrictions to your learning. You can review the SAVIGA-C01 Test Answers everywhere. Your spare time can be made good use. Secondly, you can make notes on your materials, which will accelerate your understanding of the SAVIGA-C01 exam guides. In a word, our company

seriously promises that we do not cheat every customer.
