Customers who choose this platform to prepare for the Google Cloud-Digital-Leader Exam require a high level of satisfaction. For this reason, Free4Dump has a support team that works around the clock to help Cloud-Digital-Leader applicants find answers to their concerns.

Google Cloud Digital Leader Sample Questions (Q19-Q24):

NEW QUESTION # 19

An organization wants to digitize and share large volumes of historical text and images. Why is a public cloud a better option than an on-premises solution?

- A. Cost-effective at scale
- B. In-house hardware management
- C. Optimizes capital expenditure
- D. Provides physical encryption key

Answer: A

NEW QUESTION # 20

Your organization offers public mobile apps and websites. You want to migrate to a Google Cloud-based solution for checking and maintaining your users' usernames and passwords and controlling their access to different resources based on their identity. Which should your organization choose?

- **A. Identity Platform**
- B. Private Google Access
- C. Compute Engine firewall rules
- D. VPN tunnels

Answer: A

Explanation:

An identity platform is a modern solution for managing the identities of users and devices in a centralized fashion.

NEW QUESTION # 21

An organization is concerned about the risk of data loss that may occur due to hardware failures or cyber attacks. They want to restore their systems to a previous state if such an event occurs. What should the organization do?

- A. Set service level objectives (SLOs).
- B. Enable autoscaling.
- **C. Back up data regularly.**
- D. Use Cloud Monitoring.

Answer: C

Explanation:

The correct answer is B. Back up data regularly. Here's why:

* Context of the Question: The organization is concerned about data loss due to hardware failures or cyber-attacks and wants to restore their systems to a previous state in case of such events.

* Google Cloud Product Relevance:

* Backing up data regularly is the most effective way to ensure data can be restored in case of loss or damage. Regular backups create copies of data that can be stored separately from the main systems, ensuring that even if the primary data is lost or compromised, the backup can be used to restore it to a previous state.

* Google Cloud offers several backup solutions, such as Cloud Storage for storing backups and Cloud SQL automated backups for database instances.

* Why Not Other Options:

* A. Use Cloud Monitoring: Cloud Monitoring helps observe and monitor the health and performance of applications and infrastructure but does not provide backup or data restoration capabilities.

* C. Set service level objectives (SLOs): SLOs are targets for service availability and performance but do not directly help with data backup or recovery.

* D. Enable autoscaling: Autoscaling helps automatically adjust resources to meet demand but does not protect against data loss or provide restoration capabilities.

Google Cloud Digital Leader References:

* To understand more about backup strategies in Google Cloud, refer to Backup and DR (Disaster Recovery) documentation.

NEW QUESTION # 22

An organization wants to adopt the advanced machine learning capabilities of the Google Cloud. However, regulations require data to be stored in an on-premises data center.

Which approach should the organization use?

- A. A private-cloud approach
- B. A public-cloud approach
- **C. A hybrid-cloud approach**
- D. A multi-cloud approach

Answer: C

NEW QUESTION # 23

Your company has multiple internal applications used by your employees. You also have to give access to certain vendors and contractors. What is a good option for you to adopt?

- A. Allow all users, especially contractors and vendors, to bring their own identities, like those at gmail.com.
- B. Keep the credentials separate for each application to reduce the blast radius in case of any issues.
- C. Use an external identity provider that is famous and popular like Facebook or Twitter; that way, even your vendors and contractors will have an account there.
- D. Use an IDaaS (Identity as a Service) product that can centrally manage authentication and authorization for the applications.

Answer: D

Explanation:

Explanation:

IDaaS - identity providers managed by the company give better control over security and privacy. Security/access can be set granularly, while also being centralized. You don't have to manage multiple credentials.

NEW QUESTION # 24

.....

You may never have thought that preparing for the upcoming Cloud-Digital-Leader certification exam would be so simple. The good news is that the Cloud-Digital-Leader exam material of our Free4Dump has been successful for all users who have used it to think that passing the exam is a simple matter! After using our Cloud-Digital-Leader exam materials, they all passed the exam easily and thought it was a valuable learning experience. Learn and practice our Cloud-Digital-Leader exam questions during the preparation of the exam, it will answer all your doubts. This process of learning left a deep impression on candidates. The exciting Cloud-Digital-Leader Exam Material is a product created by professionals who have extensive experience in designing exam materials. These professionals have an in-depth understanding of the candidate's questions and requirements, so our Cloud-Digital-Leader exam questions meets and exceeds your expectations. Learn and practice our exams so that you can easily pass candidates and have a valuable learning experience.
