## Salesforce Accredited B2B Commerce Administrator Sample Questions (Q52-Q57):

### NEW QUESTION # 52

Customers on a current project are accustomed to searching for products by part number. The format for part numbers is numeric with two decimal places, such as: 123456.78.\*The search results do not seem to be producing an expected number of hits on the part numbers entered. What are two likely causes?

- A. Part number is a text field added after the last search index.
- B. Part number values can change with each variation product.
- C. The part number value is in a formula field that uses other field values.
- D. The part number and product code contain the same value.

**Answer: B,C**

Explanation:

Two likely causes of not producing an expected number of hits on the part numbers entered are: part number values can change with each variation product, and the part number value is in a formula field that uses other field values. A variation product is a product that has different variations based on attributes, such as color or size1, [12]. A part number is a unique identifier for a product or a variation product1, [13]. If part number values can change with each variation product, then searching for a part number may not return all the relevant results, because some variation products may have different part numbers than their parent products. If the part number value is in a formula field that uses other field values, then searching for a part number may not return any results, because formula fields are not searchable by default. ### NEW QUESTION # 53

Which two steps should an Administrator take to move the B2B store configuration from a sandbox environment to a production environment?

- A. Add the Store Configuration to a change set.
- B. Export the store settings with Data Loader.
- C. Export the store configuration from the Store Administration.
- D. Import the settings to the Production environment with Workbench.

**Answer: A,B**

Explanation:

To move the B2B store configuration from a sandbox to a production environment, an Administrator shouldA. Add the Store Configuration to a change setandC. Export the store settings with Data Loader. The change set allows for the transfer of configuration settings, while the Data Loader can be used to migrate data related to the store setup, ensuring a smooth transition to the production environment.

### NEW QUESTION # 54

Which three statement regarding Storefront Associations?

Choose 3 answers

- A. Restricted access to a particular storefront at the account or account group level.
- B. A default storefront is available for a given community.
- C. Multiple communities can use the same storefront.
- D. Restricted access to a particular storefront at the account group level only
- E. Salesforce security settings at the community level can be ignored and leverage the security settings present within storefront associations

**Answer: A,B,C**

Explanation:

According to the Storefront Associations page, storefront associations are settings that control which accounts or account groups have access to which storefronts. Storefront associations have the following features:

Restricted access to a particular storefront at the account or account group level. You can assign one or more accounts or account groups to a storefront and limit their access to that storefront only. Therefore, option A is correct.

Multiple communities can use the same storefront. You can associate one or more communities with a storefront and share the same settings and data across them. Therefore, option B is correct.

A default storefront is available for a given community. You can specify which storefront should be used as the default for a community when no other storefront association matches. Therefore, option D is correct.

Option C is false because Salesforce security settings at the community level cannot be ignored and leveraged by the security settings present within storefront associations. You still need to configure sharing settings, profiles, permission sets, and public groups for your community users. Reference: Storefront Associations, Storefront Associations Overview

### NEW QUESTION # 55

What needs to be done after cloning and saving the out-of-the-box checkout flow template before it can be used?

- A. Rename the existing Checkout Flow in place
- B. Change the permissions on the existing checkout flow
- C. Add a version letter
- D. Activate the flow

**Answer: D**

Explanation:

After cloning and saving the out-of-the-box checkout flow template, the next step that needs to be done before it can be used is A. Activate the flow. Activation makes the flow available for use, enabling it to be triggered as part of the checkout process in the B2B Commerce store.

### NEW QUESTION # 56

What is the purpose of connectedCallback in a Lightning web component? '04m385.

- A. It performs actions when a network request is made.
- B. It performs actions when a component is added to the DOM.
- C. It perform actions when a component makes a call to a Connect APL.
- D. It performs actions when a component is removed from the DOM.

**Answer: B**

Explanation:

The connectedCallback is a lifecycle hook in Lightning web component. It fires when a component is inserted into the DOM. It runs once when the component is inserted. connectedCallback in Lightning Web Component flows from parent to child. It can be used to perform actions such as initializing variables, fetching data, or setting event listeners<sup>1</sup>. Reference: connectedCallback() and disconnectedCallback(), connectedCallback() in Lightning Web Component, What is connectedCallback in LWC?
