

試験の準備方法-素敵なC-BW4H-2505関連日本語版問題集試験-100%合格率のC-BW4H-2505日本語問題集

NOTE: Each correct selection is worth one point.

Required secrets: Certificate Personal access token Shared Access Authorization token Username and password

Storage location: Azure Data Lake Azure Key Vault Azure Storage with HTTP access Azure Storage with HTTPS access

Answer:

Required secrets: Certificate Personal access token Shared Access Authorization token Username and password

Storage location: Azure Data Lake Azure Key Vault Azure Storage with HTTP access Azure Storage with HTTPS access

Explanation:
Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.
Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.
The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.

SAP C-BW4H-2505日本語問題集 & C-BW4H-2505受験記

成功したいですか？目立ちたいですか？当社の製品を選択してください。数年間、優れたC-BW4H-2505模擬試験教材を提供するように最善を尽くしています。当社の製品を選択した場合は、試験を受験して有効な認定資格を取得し、SAP C-BW4H-2505模擬試験教材で大きなメリットを得ることができます。適切なポジションに

応募する場合、SAP Certified Associate - Data Engineer - SAP BW/4HANAが役立ちます。よろしければ、C-BW4H-2505模擬テストファイルを使用して、新しい一步を踏み出し、より良い未来を実現してください。

SAP C-BW4H-2505 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.
トピック 2	<ul style="list-style-type: none">SAP BW4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW4HANA: It focuses on designing scalable, high-performing data models.
トピック 3	<ul style="list-style-type: none">SAP BW4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW4HANA projects: It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.
トピック 4	<ul style="list-style-type: none">SAP BW Query Design: This section of the exam assesses the ability of Data Engineers to create and run queries using SAP BW4HANA: It evaluates how well candidates can work with query components to retrieve and structure data effectively for reporting and analysis.
トピック 5	<ul style="list-style-type: none">SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.

SAP Certified Associate - Data Engineer - SAP BW/4HANA 認定 C-BW4H-2505 試験問題 (Q80-Q85):

質問 #80

You use a measure with semantic type "Amount with Currency Code" in your SAP HANA HDI calculation view. Which kind of currency reference can be assigned to the measure? Note: There are 2 correct answers to this question.

- A. A column from another SAP HANA view
- B. A fixed currency from table TCURC
- C. A variable in the same SAP HANA view
- D. Another column of the same SAP HANA view

正解: C、D

質問 #81

What are some of the prerequisites for using SAP S/4HANA ABAP CDS views for extraction into SAP BW/4HANA in an ODP context? Note: There are 2 correct answers to this question.

- A. The ABAP CDS views must be released through the program RODPS_OS_EXPOSE for BW extraction.
- B. The Operational Data Provisioning Framework must be configured in SAP BW/4HANA.
- C. The ABAP CDS views must be defined with the appropriate data extraction annotations.
- D. An ODP source system with context ODP_CDS must be created in SAP BW/4HANA.

正解: C、D

質問 #82

You define a remote subscription of type UPSERT in an SAP HANA Smart Data Integration (SDI) real-time update scenario. Which fields are added to the DataSource automatically? Note: There are 3 correct answers to this question.

- A. SDILCHANGE_SEQUENCE
- B. SDI_ENTITY_COUNTER
- C. SDILCHANGE_TYPE
- D. SDILRECORD_MODE
- E. SDILCHANGE_TIME

正解: A、C、E

質問 #83

You create a Data Store object (advanced) using the "Data Mart DataStore Object" modeling property. Which behaviors are specific to this modeling property? Note: There are 2 correct answers to this question.

- A. The records are treated as if all characteristics are in the key.
- B. Reporting is done based on a union of the inbound active tables.
- C. Query results are shown only when data has been activated.
- D. The change log table will be filled only after data activation.

正解: B、C

解説:

When creating a Data Store object (advanced) in SAP BW/4HANA, selecting the "Data Mart DataStore Object" modeling property defines specific behaviors tailored for reporting and analytics. This type of DataStore object is optimized for use as a data mart, meaning it is designed to store aggregated or cleansed data that is ready for consumption by reporting tools.

* Query Results Are Shown Only When Data Has Been Activated (B): In a Data Mart DataStore Object, data must be explicitly activated before it becomes available for reporting. This ensures that only consistent and validated data is exposed to end users.

During the activation process:

* Data is moved from the inbound table to the active table.

* Any errors or inconsistencies are resolved before the data is made available for querying.

* Queries executed against the DataStore object will only display results from the active table, ensuring reliable and accurate reporting.

* Reporting Is Done Based on a Union of the Inbound Active Tables (C): A Data Mart DataStore Object supports multiple inbound tables, which can be used to store data from different sources or partitions. For reporting purposes, the system performs a union of these inbound active tables to provide a consolidated view of the data. This behavior is particularly useful when integrating data from multiple sources into a single reporting layer.

Behaviors Specific to the "Data Mart DataStore Object" Modeling Property:

* A. The Change Log Table Will Be Filled Only After Data Activation: This statement is incorrect because the change log table is not a feature of the Data Mart DataStore Object. Change logs are typically associated with Staging and Reporting DataStore Objects (Stard) or other types of DataStore objects that track detailed changes. In contrast, a Data Mart DataStore Object focuses on providing aggregated and cleansed data for reporting, without maintaining a detailed change history.

* D. The Records Are Treated as If All Characteristics Are in the Key: This statement is also incorrect. In a Data Mart DataStore Object, records are not treated as if all characteristics are part of the key. Instead, the key structure is explicitly defined during the modeling process, and only the specified key fields are used to identify unique records. Treating all characteristics as part of the key is a behavior associated with other types of DataStore objects, such as those used for staging or operational reporting.

Incorrect Options:

SAP Data Engineer - Data Fabric Context: In the context of SAP Data Engineer - Data Fabric, understanding the behavior of different DataStore object types is essential for designing efficient and scalable data models. The Data Mart DataStore Object is specifically designed for reporting and analytics, making it a key component of the data fabric architecture. By ensuring that query results are only shown after activation and leveraging a union of inbound active tables, this modeling property supports reliable and consistent reporting across the organization.

For further details, refer to:

* SAP BW/4HANA Data Modeling Guide: Explains the differences between DataStore object types and their specific behaviors.

* SAP Learning Hub: Offers training on designing and implementing DataStore objects in SAP BW/4HANA.

By selecting B (Query results are shown only when data has been activated) and C (Reporting is done based on a union of the inbound active tables), you ensure that the correct behaviors specific to the "Data Mart DataStore Object" modeling property are identified.

質問 #84

Which objects values can be affected by the key date in a BW query? Note: There are 3 correct answers to this question.

- A. Time characteristics
- B. Navigation attributes
- C. Hierarchies
- D. Basic key figures
- E. Display attributes

正解: B、C、D

質問 #85

我々Jpexamは最も速いペースする方法をあげるし、PDF版、ソフト版、オンライン版の三つ種類版を提供します。PDF版、ソフト版、オンライン版は各自のメリットがあるので、あなたは自分の好きにするし、我々JpexamのSAP C-BW4H-2505問題集デモを参考して選択できます。どんな版でも、SAP C-BW4H-2505試験に合格するには成功への助力です。
