

Test Certification 2V0-15.25 Cost & 2V0-15.25 Reliable Test Pdf

BONUS!!! Download part of ActualTorrent 2V0-15.25 dumps for free: <https://drive.google.com/open?id=1q2jQNXqtzQWYZt3VHjdC3YI8I3VLDvWO>

Overall, we can say that with the VMware 2V0-15.25 exam you can gain a competitive edge in your job search and advance your career in the tech industry. However, to pass the VMware Cloud Foundation 9.0 Support (2V0-15.25) exam you have to prepare well. For the quick 2V0-15.25 exam preparation the 2V0-15.25 Questions is the right choice.

ActualTorrent provides a high-quality VMware 2V0-15.25 practice exam. The best feature of the VMware 2V0-15.25 exam dumps is that they are available in PDF and a web-based test format. VMware offer updated VMware 2V0-15.25 Exam products to our valuable customers. Real VMware 2V0-15.25 exam questions along with answers are being provided in two formats.

>> Test Certification 2V0-15.25 Cost <<

Get to Know the Real Exam with ActualTorrent VMware 2V0-15.25 Practice Test

Many people may worry that the 2V0-15.25 guide torrent is not enough for them to practice and the update is slowly. We guarantee you that our experts check whether the 2V0-15.25 study materials is updated or not every day and if there is the update the system will send the update to the client automatically. So you have no the necessity to worry that you don't have latest 2V0-15.25 Exam Torrent to practice. Before you buy our product, please understand the characteristics and the advantages of our VMware Cloud Foundation 9.0 Support guide torrent in detail as follow.

VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.
Topic 2	<ul style="list-style-type: none">• Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.
Topic 3	<ul style="list-style-type: none">• VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.

Topic 4	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
Topic 5	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.

VMware Cloud Foundation 9.0 Support Sample Questions (Q46-Q51):

NEW QUESTION # 46

An administrator is managing a VMware Cloud Foundation (VCF) environment. They receive a request from the developers to enable vDefend - Distributed Firewall. However, they noticed It cannot be enabled due to a missing license. Where must the new license be applied?

- A. NSX Manager.
- B. VCF Operations.
- C. VCF Automation.
- D. SDDC Manager.

Answer: A

Explanation:

vDefend - Distributed Firewall is a security capability delivered by NSX within VMware Cloud Foundation.

Although VCF components such as SDDC Manager, VCF Operations, and VCF Automation rely on licensing frameworks, the enforcement and activation of NSX features-including Distributed Firewall-occur entirely within NSX Manager.

To enable vDefend (Distributed Firewall), NSX Manager must detect a valid NSX license that includes security features. Without applying the correct license directly to NSX Manager:

* The Distributed Firewall feature remains locked

* vDefend cannot be enabled in workload domains

* Security rules and micro-segmentation capability remain unavailable

VCF does not apply NSX security licensing at the SDDC Manager, VCF Automation, or VCF Operations layers. Instead, NSX Manager handles all feature entitlement checks internally.

Therefore, the new license must be installed directly in NSX Manager, under:

System # Licensing # NSX # Add License

Options A, C, and D are incorrect because none of those components control NSX feature activation.

NEW QUESTION # 47

An administrator attempts to update the VMware vCenter root account password through VMware Cloud Foundation (VCF) Operations. The attempt fails with the following error message, "Failed to authenticate with the guest operating system using the supplied credentials." What is the cause of the failure?

- A. The password was previously updated on the vCenter directly.
- B. The SSH service is not running.
- C. vCenter is down.
- D. The password does not meet policy requirements.

Answer: A

Explanation:

VMware Cloud Foundation 9.0 Operations manages credentials for integrated components such as vCenter Server through its internal password vault. When administrators modify passwords directly on the component

-such as manually changing the vCenter root password-VCF Operations is no longer able to authenticate using its stored credentials.

As a result, any password rotation or update operation initiated through VCF Operations fails during the validation step.

The error "Failed to authenticate with the guest operating system using the supplied credentials" is a direct symptom of this condition.

VCF Operations attempts to log in to vCenter using the previously stored credential, which no longer matches the actual root password. Documentation describes this as an "out-of- sync credential state," and the resolution is to perform password remediation to re-synchronize VCF Operations with the system.

Option A (password complexity) is irrelevant because complexity is validated only after authentication.

Option C (vCenter down) would generate connectivity errors, not authentication errors.

Option D (SSH disabled) does not prevent password rotation because VCF Operations uses VMware Tools guest operations, not SSH, for authentication.

NEW QUESTION # 48

A VMware NSX Edge node is present in the inventory but shows "Not Ready" status In NSX Manager UI.

What should the administrator check first?

- A. The license key in NSX Manager UI
- **B. The NSX Edge node's uplink network configuration**
- C. The NSX Edge node's CPU reservation
- D. The NSX Edge has been added to an Edge cluster

Answer: B

Explanation:

The status "Node Not Ready" in the NSX Manager UI (specifically in the Configuration State column of the Edge Transport Nodes view) indicates that the NSX Manager has failed to push or validate the necessary configuration to the Edge VM.

* Check Uplink Network Configuration (Option C): This is the most common cause for a "Node Not Ready" state during deployment or operation. For an Edge Node to be "Ready" (Success/Up), it must have a valid Transport Node configuration, which includes the Uplink Profile, IP Pool (for TEPs), and mapping to the Fastpath Interfaces (N-VDS). If the uplink configuration is missing, incorrect, or the management plane cannot communicate with the edge to apply it, the node remains in a "Not Ready" state.

* Why not Option A? While an Edge must be in an Edge Cluster to be utilized by a Tier-0 Gateway, a standalone Edge Node should still report a status of "Success" (Configuration) and "Up" (Node Status) if it is healthy. Adding a "Not Ready" (unhealthy/unconfigured) node to a cluster will not fix the underlying configuration issue.

* Why not Option D? Missing CPU reservations typically lead to a "Degraded" status or service crashes (Dataplane down), but "Node Not Ready" is the specific indicator of an incomplete or stalled configuration workflow, usually tied to the transport/uplink setup.

NEW QUESTION # 49

An administrator wants to expand a VMware vSAN cluster in a workload domain by adding an unassigned host from the vSphere client. However, at the Host Selection screen no hosts are available and the following message displayed:

No unassigned hosts available with storage type VSAN. Commission hosts with physical NICs 0 & 1 to Add Host from UI.

How can the administrator commission hosts?

- A. From the vSphere client by navigating to Supervisor Management.
- B. From VCF Operations by navigating to Fleet Management.
- C. From the vSphere client by navigating to the Global Inventory.
- **D. From the SDDC manager by navigating to Workload Domains.**

Answer: D

Explanation:

In VMware Cloud Foundation 9.0, host commissioning is performed exclusively through SDDC Manager, not from the vSphere Client. When expanding a vSAN cluster inside a workload domain, all ESXi hosts must first be placed in an Unassigned state and then commissioned in SDDC Manager before they can appear in the "Add Host" wizard of the vSphere Client. The message in the problem - "No unassigned hosts available with storage type VSAN. Commission hosts with physical NICs 0 & 1 to Add Host from UI" - indicates that SDDC Manager has not yet commissioned any suitable hosts with the required NIC layout.

VCF 9.0 documentation states that for workload domain expansion, hosts must be commissioned under:

SDDC Manager # Workload Domains # (Select WLD) # Hosts # Commission Hosts.

This validates hardware, storage type (such as vSAN ESA or OSA), NIC placement, and ensures the host is compatible with the domain's configuration.

Options pointing to vSphere Client (A, D) or VCF Operations (B) do not perform the commissioning workflow. Therefore, the correct and verified answer is C, the only interface where host commissioning is officially supported.

NEW QUESTION # 50

An administrator needs to confirm which account initiates tasks from VMware Cloud Foundation (VCF) Operations. As a test, a

virtual machine (VM) is powered on/off through VCF Operations.
In the vCenter task pane, what account would be the initiator of the task?

- A. The administrator@vsphere.local account.
- **B. The service account between VCF Operations and vCenter.**
- C. The credentials of the logged in user.
- D. The service account between vCenter and SDDC Manager.

Answer: B

Explanation:

When VMware Cloud Foundation Operations performs actions on vCenter—such as powering on or off a VM—the tasks are initiated through an integration service account, not the identity of the user logged into the VCF Operations UI. VCF Operations connects to vCenter using a configured collector or integration credential, typically a service account defined during initial setup. VCF documentation clarifies that all automated or orchestrated tasks originating from VCF Operations use this trusted account to ensure consistent auditing, RBAC enforcement, and operational isolation from user identities. Therefore, in the vCenter task pane, the "Initiated By" field always reflects the VCF Operations # vCenter service account, even if the end-user triggered the action indirectly.

Option A is incorrect because the logged-in user does not directly interface with vCenter.

Option C refers to SDDC Manager's integration account, which is unrelated to VCF Operations workflows.

Option D (administrator@vsphere.local) appears only when vCenter's built-in admin performs the action.

NEW QUESTION # 51

.....

We provide you with free demo for you to have a try before buying 2V0-15.25 exam bootcamp, so that you can have a deeper understanding of what you are going to buy. What's more, 2V0-15.25 exam materials contain most of the knowledge points for the exam, and you can pass the exam as well as improve your professional ability in the process of learning. In order to let you obtain the latest information for the exam, we offer you free update for 365 days after buying 2V0-15.25 Exam Materials, and the update version will be sent to your email automatically. You just need to check your email for the latest version.
