Our passing rate of the PDI Study Guide has reached up to 98 to 100 percent up to now, so you cannot miss this opportunity. And you will feel grateful if you choose our PDI exam questions.

Salesforce is one of the most popular and widely used customer relationship management (CRM) platforms in the world. It provides organizations with a wide range of tools and features to manage their customer data, streamline business processes, and improve overall efficiency. One of the key factors that makes Salesforce so powerful is its ability to be customized and extended to meet the unique needs of each organization. This is where the Salesforce Platform Developer I (PDI) certification comes into play.

Salesforce PDI (Platform Developer I) Exam is a certification exam designed for individuals who want to demonstrate their proficiency in Salesforce development. PDI exam is ideal for developers who have experience in building custom applications, automating business processes, and integrating systems using the Salesforce platform. The PDI Exam covers a wide range of topics such as Salesforce fundamentals, data modeling, Apex programming, and Lightning components development. Passing PDI exam indicates that the candidate has a deep understanding of Salesforce development best practices and can build high-quality solutions that meet business requirements.

The PDI certification is an excellent way to demonstrate your proficiency in Salesforce development to potential employers and clients. It is a valuable asset for developers who wish to advance their careers in the Salesforce ecosystem. By obtaining the PDI certification, you can showcase your skills in developing custom applications and integrations on the Salesforce platform. Moreover, it can also help you gain recognition as a Salesforce expert and increase your chances of getting hired or promoted.

2026 Realistic Salesforce PDI Exam Questions And Answers

Most people now like to practice PDI study braindumps on computer or phone, but I believe there are nostalgic people like me who love paper books. The PDF version of our PDI actual exam supports printing. This PDF version also supports mobile phone scanning, so that you can make full use of fragmented time whenever and wherever possible. And the PDF version of our PDI learning guide can let you free from the constraints of the network, so that you can do exercises whenever you want.

Salesforce Platform Developer I (PDI) Sample Questions (Q35-Q40):

NEW QUESTION # 35

What are three characteristics of change set deployments?

Choose 3 answers Sending a change set between two orgs requires a deployment connection.

- A. Deployment is done in a one-way, single transaction.
- B. Change sets can deploy custom settings data.
- C. Change sets can be used to transfer records.
- D. Change sets can only be used between related organizations.
- E. Sending a change set between two orgs requires a deployment connection.

Answer: A,D,E

Explanation:

Change sets can only be used between related organizations:

Change sets require a relationship between the source and target Salesforce orgs, such as a production org and its sandboxes. You cannot use change sets between unrelated Salesforce orgs.

Reference:

Deployment is done in a one-way, single transaction:

When a change set is deployed, it is applied to the target org as a single transaction. If there are any errors in the deployment, the entire transaction is rolled back.

Sending a change set between two orgs requires a deployment connection:

Before sending or deploying a change set, a deployment connection must be established between the source and target orgs. This connection is configured in the setup menu under "Deployment Connections." Incorrect Options:

A . Change sets can deploy custom settings data:

Change sets cannot deploy data, including custom settings data. They only move metadata.

E . Change sets can be used to transfer records:

Records (data) are not supported by change sets; they only facilitate metadata migration.

NEW QUESTION # 36

Refer to the following code snippet for an environment has more than 200 Accounts belonging to the Technology' industry:

When the code execution, which two events occur as a result of the Apex transaction?

When the code executes, which two events occur as a result of the Apex transaction?

Choose 2 answers

- A. If executed In a synchronous context, the apex transaction is likely to fail by exceeding the DML governor limit.
- B. The Apex transaction fails with the following message. "SOBJECT row was retrieved via SOQL without querying the requested field Account.Is.Tech__c".
- C. If executed in an asynchronous context, the apex transaction is likely to fail by exceeding the DML governor limit
- D. The Apex transaction succeeds regardless of any uncaught exception and all processed accounts are updated.

Answer: B,D

NEW QUESTION # 37

What is the result of the following code?

- A. The record will be created and no error will be reported.
- B. The record will be created and a message will be in the debug log.
- C. The record will not be created and no error will be reported.
- D. The record will not be created and an exception will be thrown.

Answer: D

Explanation:

* Based on the provided code, an exception is likely being thrown if a required field is missing or if there are validation rules that the record does not meet. Salesforce will throw an exception when an attempt to create a record violates constraints.

Why not other options?

* B: Salesforce reports errors for failed DML operations unless they are handled in a try-catch block.

* C: The record cannot be created successfully if constraints are violated.

* D: Debug logs may provide details, but the record creation would fail.

References:

* Apex DML Exception Handling

NEW QUESTION # 38

A developer must perform a complex SOQL query that joins two objects in a Lightning component. How can the Lightning component execute the query?

- A. Invoke an Apex class with the method annotated as @AuraEnabled to perform the query.
- B. Create a flow to execute the query and invoke from the Lightning component.
- C. Use the Salesforce Streaming API to perform the SOQL query.
- D. Write the query in a custom Lightning web component wrapper and invoke from the Lightning component.

Answer: A

Explanation:

* The Lightning component cannot directly perform SOQL queries.

* An Apex class annotated with @AuraEnabled provides server-side logic that can execute the SOQL query and return the data to the Lightning component.

NEW QUESTION # 39

Universal Containers hires a developer to build a custom search page to help users find the Accounts they want. Users will be able to search on Name, Description, and a custom comments field.

Which consideration should the developer be aware of when deciding between SOQL and SOSL ?

Choose 2 answers

- A. SOSL is able to return more records.
- B. SOSL is faster for text searches.
- C. SOQL is faster for text searches.
- D. SOQL is able to return more records.

Answer: B,D

NEW QUESTION # 40

.....
