

Actual AZ-800 Test Answers & Exam AZ-800 Forum

Microsoft Certified Associate AZ 800 Exam Windows Server Hybrid Administrator Exam New Latest Exam with All Questions and Answers

Your network contains a multi-site Active Directory Domain Services (AD DS) forest. Each Active Directory site is connected by using manually configured site links and automatically generated connections. You need to minimize the latency for changes to Active Directory. What should you do?

- A. For each site link, modify the site link costs.
- B. Create a site link bridge that contains all the site links.
- C. For each site link, modify the options attribute. ----- Correct Answer -----
- D. For each site link, modify the replication schedule.

Your on-premises network contains an Active Directory domain named contoso.com. You have an Azure AD tenant. You plan to sync contoso.com with the Azure AD tenant by using Azure AD Connect cloud sync. You need to create an account that will be used by Azure AD Connect cloud sync. Which type of account should you create?

- A. system-assigned managed identity
- B. group managed service account (gMSA) ----- Correct Answer -----
- C. user
- D. InetOrgPerson ----- Correct Answer ----- B. group managed service account (gMSA)

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains three domains. Each domain contains 10 domain controllers. You plan to store a DNS zone in a custom Active Directory partition. You need to create the Active Directory partition for the zone. The partition must replicate to only four of the domain controllers. What should you use?

- A. ntdsutil.exe ----- Correct Answer -----
- B. Active Directory Sites and Services
- C. Set-DnsServer
- D. DNS Manager ----- Correct Answer ----- A. ntdsutil.exe

You have two servers that have the Hyper-V server role installed. The servers are joined to a failover cluster. Both servers can connect to the same disk on an iSCSI storage device. You plan to use the iSCSI storage to store highly available Hyper-V virtual machines that will support live migration functionality. You need to configure a storage resource in the failover cluster to store the virtual machines. What should you configure?

- A. Cluster Shared Volumes (CSV) ----- Correct Answer -----
- B. Distributed File System (DFS) Replication
- C. a storage pool
- D. a mirrored volume ----- Correct Answer ----- A. Cluster Shared Volumes (CSV)

In order to save a lot of unnecessary trouble to users, we have completed our AZ-800 study questions research and development of online learning platform, users do not need to download and install, only need your digital devices have a browser, can be done online operation of the AZ-800 test guide. This kind of learning method is very convenient for the user, especially in the time of our fast pace to get AZ-800 Certification. When using our AZ-800 training materials, all the operations of the AZ-800 learning material of can be applied perfectly.

To pass the AZ-800 Exam, candidates must demonstrate their expertise in implementing and managing Windows Server technologies, including Active Directory, Hyper-V, and Storage Spaces Direct. They must also have a deep understanding of Azure services such as Azure Virtual Machines, Azure Storage, and Azure Site Recovery. Additionally, candidates must be familiar with hybrid scenarios and be able to manage and monitor hybrid environments.

Exam Microsoft AZ-800 Forum & Reliable AZ-800 Dumps Ppt

You can learn AZ-800 quiz torrent skills and theory at your own pace, and you are not necessary to waste your time on some useless books or materials and you will save more time and energy that you can complete other thing. We also provide every candidate who wants to get certification with free Demo to check our materials. It is time for you to realize the importance of our AZ-800 Test Prep, which can help you solve these annoyance and obtain a AZ-800 certificate in a more efficient and productive way.

The Administering Windows Server Hybrid Core Infrastructure certification exam is suitable for IT professionals at varying levels of experience, including system administrators, network administrators, cloud solutions architects, and hybrid infrastructure administrators. IT professionals intending to take this certification should have prior knowledge of administering Windows Server 2012 or higher, along with an understanding of cloud and hybrid applications. Candidates with experience in Azure and Windows Server administration will have an advantage when taking AZ-800 Exam.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q135-Q140):

NEW QUESTION # 135

You need to configure Azure File Sync to meet the file sharing requirements. What should you do? To answer, select the appropriate options in the answer area. NOTE Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-planning>

NEW QUESTION # 136

You create a new Azure subscription.

You plan to deploy Azure Active Directory Domain Services (Azure AD DS) and Azure virtual machines.

The virtual machines will be joined to Azure AD DS.

You need to deploy Active Directory Domain Services (AD DS) to ensure that the virtual machines can be deployed and joined to Azure AD DS.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Reference:

The Administering Windows Server Hybrid Core Infrastructure guidance for deploying Azure Active Directory Domain Services (Azure AD DS) in a new subscription is explicit about the required sequence.

First, you prepare networking: "Before you enable Azure AD DS, create or select an Azure virtual network and subnet that will host the managed domain." Next, you provision the managed domain: "Enable Azure AD DS into the chosen virtual network/subnet; the service deploys managed domain controllers and exposes domain IP addresses." Finally, you update DNS for the VNet so VMs can locate the domain: "After the managed domain is provisioned, configure the virtual network DNS servers to the IP addresses of the Azure AD DS domain controllers so that virtual machines can resolve the domain and join it." The course also clarifies what you do not do with Azure AD DS: "Azure AD DS is a managed domain; you do not install the AD DS role or run the AD DS installation wizard on your own VMs." And: "Azure AD Connect is only required when synchronizing identities from an on-premises AD; it isn't required for a cloud- only deployment of Azure AD DS." Therefore, the correct sequence to ensure VMs can be deployed and joined to Azure AD DS is:

Create an Azure virtual network,

Create an Azure AD DS instance (into that VNet/subnet),

Modify the VNet DNS settings to point to the managed domain IPs.

NEW QUESTION # 137

You have on-premises file servers that run Windows Server as shown in the following table.

You have the Azure file shares shown in the following table.

You add a Storage Sync Service named Sync1 and an Azure File Sync sync group named Group1. Group1 uses share1 as a cloud endpoint.

You register Server1 and Server2 with Sync1. You add D:\Folder1 from Server1 as a server endpoint in Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-planning>

NEW QUESTION # 138

Your on-premises network contains an Active Directory Domain Services (AD DS) domain.

You plan to sync the domain with a Microsoft Entra tenant by using Microsoft Entra Connect cloud sync.

You need to meet the following requirements:

* Install the software required to sync the domain and Microsoft Entra ID.

* Enable password hash synchronization.

What should you install, and what should you use to enable password hash synchronization? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

Explanation:

NEW QUESTION # 139

Hotspot Question

You have a Hyper-V host named Server1 that is connected to a managed switch. The switch is connected to multiple VLANs.

On Server1, you configure a new virtual machine named VM1.

You need to configure VM1 to communicate with all the VLANs. Any network traffic that is not tagged must be directed to VLAN 20.

How should you complete the PowerShell command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Set-VMNetworkAdapterVlan

The Set-VMNetworkAdapterVlan cmdlet configures virtual LAN settings for the traffic through a virtual network adapter. Access, Trunk, Private VLAN (isolated, community, or promiscuous), and untagged are mutually exclusive.

Box 2: -Trunk -NativeVlanID 20

Specifies Trunk mode for the virtual machine network adapter. This parameter configures a tagged virtual port that passes all allowed VLANId tags to the VM adapter. Traffic with the NativeVlanId is passed untagged to the VM adapter. This parameter must be used in conjunction with parameters AllowedVlanIdList and NativeVlanId.

- NativeVlanId

Specifies the native virtual LAN identifier for a virtual machine network adapter. This parameter must be specified in conjunction with the switch parameter Trunk.
