# Quiz Perfect Salesforce - Latest MuleSoft-Integration-Architect-I Dumps Sheet

2026 Latest Exam4Tests MuleSoft-Integration-Architect-I PDF Dumps and MuleSoft-Integration-Architect-I Exam Engine Free Share: https://drive.google.com/open?id=1-p-1upBKtpdatSCiMqluzLuTFhj8JB1F

As you see, all of the three versions of our MuleSoft-Integration-Architect-I exam dumps are helpful for you to get the MuleSoft-Integration-Architect-I certification. So there is another choice for you to purchase the comprehensive version which contains all the three formats. And no matter which format of MuleSoft-Integration-Architect-I study engine you choose, we will give you 24/7 online service and one year's free updates. Moreover, we can assure you a 99% percent pass rate.

Salesforce MuleSoft-Integration-Architect-I Exam Syllabus Topics:

Topic	Details
Topic 1	• Designing Integration Solutions to Meet Performance Requirements: This topic covers meeting performance and capacity goals, using streaming features, and processing large message sequences.
Topic 2	• Designing Automated Tests for Mule Applications: This topic covers unit test suites, and scenarios for integration and performance testing.
Topic 3	• Designing for the Runtime Plane Technology Architecture: It includes analyzing Mule runtime clusters, designing solutions for CloudHub, choosing Mule runtime domains, leveraging Mule 4 class loader isolation, and understanding the reactive event processing model.
Topic 4	• Designing Architecture Using Integration Paradigms: This topic focuses on creating high-level integration architectures using various paradigms. It includes API-led connectivity, web APIs and HTTP, event-driven APIs, and message brokers, and designing Mule application using messaging patterns and technologies.
Topic 5	• Designing and Developing Mule Applications: It includes selecting application properties, using fundamental features, designing with core routers, understanding the Salesforce Connector, and leveraging core connectors.

Quiz Salesforce - Professional MuleSoft-Integration-Architect-I - Latest Salesforce Certified MuleSoft Integration Architect I Dumps Sheet

As you know, we are now facing very great competitive pressure. We need to have more strength to get what we want, and MuleSoft-Integration-Architect-I exam dumps may give you these things. After you use our study materials, you can get MuleSoft-Integration-Architect-I certification, which will better show your ability, among many competitors, you will be very prominent. Using

MuleSoft-Integration-Architect-I Exam Prep is an important step for you to improve your soft power. I hope that you can spend a little time understanding what our study materials have to attract customers compared to other products in the industry.

Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q17-Q22):

NEW QUESTION # 17
Cloud Hub is an example of which cloud computing service model?

- A. Monitoring as a Service (MaaS)
- B. Software as a Service (SaaS)
- C. Infrastructure as a Service (IaaS)
- D. Platform as a Service (PaaS)

Answer: D

NEW QUESTION # 18
An organization has chosen Mulesoft for their integration and API platform.
According to the Mulesoft catalyst framework, what would an integration architect do to create achievement goals as part of their business outcomes?

- A. agree upon KPI's and help develop and overall success plan
- B. Measure the impact of the centre for enablement
- C. build and publish foundational assets
- D. evangelize API's

Answer: A

Explanation:
According to the MuleSoft Catalyst framework, an Integration Architect plays a crucial role in defining and achieving business outcomes. One of their key responsibilities is to agree upon Key Performance Indicators (KPIs) and help develop an overall success plan. This involves working with stakeholders to identify measurable goals and ensure that the integration initiatives align with the organization's strategic objectives.
KPIs are critical for tracking progress, measuring success, and making data-driven decisions. By agreeing on KPIs and developing a success plan, the Integration Architect ensures that the organization can objectively measure the impact of its integration efforts and adjust strategies as needed to achieve desired business outcomes.

NEW QUESTION # 19
What is the MuleSoft-recommended best practice to share the connector and configuration information among the APIs?

- A. Build a separate Mule domain project for each API, and configure each of them to use a file on a shared file store to load the configuration information dynamically
- B. Build a Mule domain project, add the Database connector and configuration to it, and reference this one domain project from each System API
- C. Create an API proxy for each System API and share the Database connector configuration with all the API proxies via an automated policy
- D. Build another System API that connects to the database, and refactor all the other APIs to make requests through the new System API to access the database

Answer: B

Explanation:
The MuleSoft-recommended best practice for sharing the connector and configuration information among multiple APIs is to use a Mule domain project. The steps are:
* Create a Mule domain project.
* Add the Database connector and its configuration to the domain project.
* Reference this domain project from each System API that needs to use the Database connector and configuration.

By using a domain project, you centralize the configuration and reuse it across multiple APIs. This approach ensures consistency, reduces duplication, and simplifies maintenance and updates to the connector configuration.

NEW QUESTION # 20
The retrieveBalances flow in the Mule application is designed to use an operation in a connector to the Finance system (the Finance operation) that can only look up one account record at a time, and a operation from a different connector to the Audit system (the Audit operation) that can only insert one account record at a time.
To best meet the performance-related requirements, what scope or scopes should be used and how should they be used to incorporate the Finance operation and Audit operation into the retrieveBalances flow?

- A. Wrap the Finance operation in a Until-Successful scope. Wrap the Audit operation in a Try-Catch scope.
- B. Wrap both connector operations in a Async scope.
- C. Wrap both connector operations in a For-Each scope.
- D. Wrap the Finance operation in a Parallel For-Each scope. Wrap the Audit operation in a Async scope.

Answer: D

NEW QUESTION # 21
What is not true about Mule Domain Project?

- A. This allows Mule applications to share resources
- B. Expose multiple services within the Mule domain on the same port
- C. Only available Anypoint Runtime Fabric
- D. Send events (messages) to other Mule applications using VM queues

Answer: C

Explanation:
* Mule Domain Project is ONLY available for customer-hosted Mule runtimes, but not for Anypoint Runtime Fabric
* Mule domain project is available for Hybrid and Private Cloud (PCE). Rest all provide application isolation and can't support domain project.
What is Mule Domain Project?
* A Mule Domain Project is implemented to configure the resources that are shared among different projects.
These resources can be used by all the projects associated with this domain. Mule applications can be associated with only one domain, but a domain can be associated with multiple projects. Shared resources allow multiple development teams to work in parallel using the same set of reusable connectors. Defining these connectors as shared resources at the domain level allows the team to: - Expose multiple services within the domain through the same port. - Share the connection to persistent storage. - Share services between apps through a well-defined interface. - Ensure consistency between apps upon any changes because the configuration is only set in one place.
* Use domains Project to share the same host and port among multiple projects. You can declare the http connector within a domain project and associate the domain project with other projects. Doing this also allows to control thread settings, keystore configurations, time outs for all the requests made within multiple applications. You may think that one can also achieve this by duplicating the http connector configuration across all the applications. But, doing this may pose a nightmare if you have to make a change and redeploy all the applications.
* If you use connector configuration in the domain and let all the applications use the new domain instead of a default domain, you will maintain only one copy of the http connector configuration. Any changes will require only the domain to the redeployed instead of all the applications.
You can start using domains in only three steps:
1) Create a Mule Domain project
2) Create the global connector configurations which needs to be shared across the applications inside the Mule Domain project
3) Modify the value of domain in mule-deploy.properties file of the applications Graphical user interface Description automatically generated

NEW QUESTION # 22

......

If you are a beginner, start with the MuleSoft-Integration-Architect-I learning guide of practice materials and our MuleSoft-Integration-Architect-I exam questions will correct your learning problems with the help of the test engine. All contents of MuleSoft-Integration-Architect-I training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our MuleSoft-Integration-Architect-I Quiz guide.
