CrowdStrike CCFH-202b덤프의 유효성을 보장해드릴수 있도록 저희 기술팀은 오랜시간동안CrowdStrike CCFH-202b시험에 대하여 분석하고 연구해 왔습니다. CrowdStrike CCFH-202b 덤프를 한번 믿고CrowdStrike CCFH-202b시험에 두려움없이 맞서보세요. 만족할수 있는 좋은 성적을 얻게 될것입니다.

CrowdStrike CCFH-202b 시험요강:

주제	소개
주제 1	• Detection Analysis: This domain focuses on analyzing Host and Process Timelines in Falcon to understand events and detections, and pivoting to additional investigative tools.
주제 2	• Hunting Methodology: This domain covers conducting active hunts, performing outlier analysis, testing hunting hypotheses, constructing queries, and investigating process trees.
주제 3	• Event Search: This domain focuses on using CrowdStrike Query Language to build queries, format and filter event data, understand process relationships and event types, and create custom dashboards.

주제 4	• Reports and References: This domain covers using built-in Hunt and Visibility reports and leveraging Events Full Reference documentation for event information.

Itcertkr는 여러분을 성공으로 가는 길에 도움을 드리는 사이트입니다. Itcertkr에서는 여러분이 안전하게 간단하게 CrowdStrike인증CCFH-202b시험을 패스할 수 있는 자료들을 제공함으로 빠른 시일 내에 IT관련지식을 터득하고 한 번에 시험을 패스하실 수 있습니다.

최신 CrowdStrike Falcon Certification Program CCFH-202b 무료샘플문제 (Q28-Q33):

질문 # 28
Which field should you reference in order to find the system time of a *FileWritten event?

- A. timestamp
- B. FileTimeStamp_decimal
- C. ProcessStartTime_decimal
- D. ContextTimeStamp_decimal

정답：D

설명:
ContextTimeStamp_decimal is the field that shows the system time of the event that triggered the sensor to send data to the cloud. In this case, it would be the time when the file was written. FileTimeStamp_decimal is the field that shows the last modified time of the file, which may not be the same as the time when the file was written. ProcessStartTime_decimal is the field that shows the start time of the process that performed the file write operation, which may not be the same as the time when the file was written. Timestamp is the field that shows the time when the sensor data was received by the cloud, which may not be the same as the time when the file was written.

질문 # 29
You are reviewing a list of domains recently banned by your organization's acceptable use policy. In particular, you are looking for the number of hosts that have visited each domain. Which tool should you use in Falcon?

- A. Allowed Domain Summary Report
- B. IP Addresses Search
- C. Create a custom alert for each domain
- D. Bulk Domain Search

정답：D

설명:
Bulk Domain Search is the tool that you should use in Falcon to review a list of domains recently banned by your organization's acceptable use policy and look for the number of hosts that have visited each domain. Bulk Domain Search is an Investigate tool that allows you to search for multiple domains at once and view their network connection events across all hosts in your environment. It shows information such as domain name, number of hosts visited, number of detections generated, etc. for each domain. Create a custom alert for each domain, Allowed Domain Summary Report, and IP Addresses Search are not tools that you should use for this purpose.

질문 # 30
To find events that are outliers inside a network,_____is the best hunting method to use.

- A. time-based
- B. stacking
- C. searching
- D. machine learning

정답：B

설명：
Stacking (Frequency Analysis) is the best hunting method to use to find events that are outliers inside a network. Stacking involves grouping events by a common attribute and counting their frequency, then sorting them by ascending or descending order to identify rare or common events. This can help find anomalies or deviations from normal behavior that could indicate malicious activity. Time-based searching, machine learning, and searching are not specific hunting methods to find outliers.

질문 # 31
Adversaries commonly execute discovery commands such as netexe, ipconfig.exe, and whoami exe. Rather than query for each of these commands individually, you would like to use a single query with all of them. What Splunk operator is needed to complete the following query?

- A. OR
- B. IN
- C. NOT
- D. AND

정답：A

설명：
The OR operator is needed to complete the following query, as it allows to search for events that match any of the specified values. The query would look like this:
event_simpleName=ProcessRollup2 FileName=net.exe OR FileName=ipconfig.exe OR FileName=whoami.exe The OR operator is used to combine multiple search terms or expressions and return events that match at least one of them. The IN, NOT, and AND operators are not suitable for this query, as they have different functions and meanings.

질문 # 32
You would like to search for ANY process execution that used a file stored in the Recycle Bin on a Windows host. Select the option to complete the following EAM query.

- A.
