Sample JN0-105 Test Online & Latest JN0-105 Test Testking

There is not much disparity among these versions of JN0-105 simulating practice, but they do helpful to beef up your capacity and speed up you review process to master more knowledge about the JN0-105exam, so the review process will be unencumbered. Though the content of these three versions is the same, the displays of them are different. And you can try our JN0-105 Study Materials by free downloading the demos to know which one is your favorite.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q86-Q91):

NEW QUESTION # 86

Click the Exhibit button.

Referring to the exhibit, what should be configured on R1 to advertise a default static route into OSPF?

- A. a loopback interface
- B. a routing policy
- C. a firewall filter
- D. a management interface

Answer: B

Explanation:

To advertise a default static route into OSPF on router R1, a routing policy should be configured. This policy would typically include a statement to match the default route (0.0.0.0/0) and then apply an action to set the route as an OSPF external type, which would then be redistributed into the OSPF domain. The routing policy is a set of conditions and actions that determine how routes are imported into or exported from the routing table and how routes are shared between routing instances or routing protocols. After defining the policy, it must be applied to OSPF under the export section of the OSPF configuration on R1. This process will allow R1 to announce the default route to other OSPF routers in the network, which then can use it as a gateway of last resort to reach the Internet or other networks not explicitly known to the OSPF domain.

NEW QUESTION # 87

Exhibit

[edit]

```
user@router1 set interfaces ge-0/1/2 unit 0 family inet address 172.16.101.1/24 [edit] user@router# commit check configuration  
check succeeds
```

[edit]

```
user@router#
```

You need to configure interface ge-0/1/2 with an IP address of 172.16.100.1/24. You have accidentally entered 172.16.101.1/24 as shown in the exhibit.

Which command should you issue to solve the problem?

- A. [edit] user@router# rollback 0
- B. [edit] user@router# rollback rescue
- C. (edit) user@router# rollback 1
- D. [edit] user@router# rollback 2

Answer: C

Explanation:

If you've committed a configuration and then need to revert to the previous configuration, the rollback command is used. Since the incorrect IP address has not been committed, as indicated by the commit check command being successful, issuing rollback 1 will undo the changes made in the current session, which includes the accidental entry of the IP address.

NEW QUESTION # 88

You issue the monitor traffic interface ge-0/0/0 command.

What will this command accomplish?

- A. It displays a packet capture on interface ge-0/0/0.
- B. It displays an operational summary of ge-0/0/0.
- C. It displays the MTU and MAC address for ge-0/0/0.
- D. It displays real-time statistics for interface ge-0/0/0.

Answer: A

Explanation:

The command "monitor traffic interface ge-0/0/0" (D) initiates a packet capture on the specified interface, allowing you to view the actual packets being transmitted and received. This is useful for troubleshooting and analyzing the traffic passing through the interface in real time.

NEW QUESTION # 89

Which prompt indicates that you are using configuration mode?

- A. >
- B. #
- C. \$
- D. %

Answer: B

Explanation:

In Junos OS, the # prompt indicates that you are in configuration mode. This mode is used for making changes to the configuration of the device.

NEW QUESTION # 90

What are two functions of the routing protocol daemon (rpd)? (Choose two.)

- A. It generates chassis alarms.
- B. It maintains routing tables.
- C. It creates forwarding tables.
- D. It provides access to the CLI.

Answer: B,C

Explanation:

The Routing Protocol Daemon (rpd) is a critical component in Juniper Networks devices, responsible for all routing operations. It maintains routing tables, which hold information about network paths and destinations derived from various routing protocols. These tables are used to make decisions about where to send packets. Additionally, rpd generates forwarding tables based on the information in the routing tables. The forwarding tables are then used by the Packet Forwarding Engine (PFE) to actually forward packets to their next hop or final destination.

NEW QUESTION # 91

.....

In order to meet the needs of all people, the experts of our company designed such a JN0-105 guide torrent that can help you pass your exam successfully. Having our study materials, it will be very easy for you to get the certification in a short time. If you try purchase our study materials, you will find our JN0-105 question torrent will be very useful for you. We are confident that you will be attracted to our JN0-105 guide question.
