2V0-12.24 Reliable Dumps Ppt | 2V0-12.24 Latest Material

In order to have better life, attending certification exams and obtaining certifications will be essential on the path to success. 2V0-12.24 latest test cram sheet will help you achieve your goal. Only if you receive the certificate the companies require you can have the opportunities for raising-salary and promotion. Thousands of companies think highly of this certification. You will be popular if

you pass exam with 2V0-12.24 Latest Test Cram sheet.

VMware vSphere Foundation 5.2 Administrator Sample Questions (Q89-Q94):

NEW QUESTION # 89

An organization requires granular control over vCenter permissions and they need to assign roles to specific user groups. Which three steps must be followed to assign roles to users or groups in vCenter? (Choose three.)

- A. Assign the role to a user or group from the identity source.
- B. Choose the role to assign from the predefined list of roles.
- C. Navigate to the vSphere Client and choose the object for which they want to assign permissions.
- D. Choose 'Add Permission' from the context menu.
- E. Manually add each user to the role.

Answer: B,C,D

Explanation:

To assign roles to users or groups in vCenter, you first need to navigate to the vSphere Client and select the object (such as a datacenter, cluster, or host) where the permissions will be applied.

After selecting the object, you use the 'Add Permission' option from the context menu to start the process of assigning permissions. You then select the role you want to assign, which will be from the predefined list of roles in vCenter. These roles define the level of access for the user or group.

NEW QUESTION # 90

An administrator has been tasked with expanding an existing VMware Cloud Foundation environment by adding a new workload domain. The environment currently has one management domain and one VI workload domain.

What options are available to the administrator for deploying NSX in the second VI workload domain?

- A. The new workload domain must have a dedicated NSX Fabric.
- B. The new workload domain can have its own dedicated NSX Fabric or it can join the existing NSX Fabric configured in the management domain.
- C. The new workload domain can have its own dedicated NSX Fabric or it can join the existing NSX Fabric configured in the existing VI domain.
- D. The new workload domain can have a dedicated NSX Fabric or it can join the existing NSX Fabric configured in either the management domain or existing VI domain.

Answer: D

Explanation:

When expanding a VMware Cloud Foundation environment with a new workload domain, you have the flexibility to either configure a dedicated NSX Fabric for the new domain or join an existing NSX Fabric from either the management domain or a previously established VI workload domain. This allows for consistent and scalable network virtualization across multiple domains in the environment.

NEW QUESTION # 91

An organization is planning to manage a diverse set of databases across multiple VMware Cloud Foundation environments. Which three capabilities of Data Services Manager would help in managing these databases efficiently? (Choose three.)

- A. Policy-based backup and recovery for databases.
- B. Automated database provisioning and deployment.
- C. Centralized monitoring and alerting for all managed databases.
- D. Automated VM migration between on-premises and cloud environments.
- E. Integration with vSAN for optimized storage management

Answer: A,B,C

Explanation:

Centralized monitoring and alerting for all managed databases: Data Services Manager enables centralized monitoring and alerting for

databases across multiple environments, providing visibility and proactive management.

Policy-based backup and recovery for databases: Data Services Manager allows for the implementation of backup and recovery policies to ensure the safety and availability of databases.

Automated database provisioning and deployment: With Data Services Manager, administrators can automate the deployment and provisioning of databases, streamlining the management process.

NEW QUESTION # 92

An administrator needs to secure an ESXi host in their environment by enabling lockdown mode.

What two steps should be taken to secure the ESXi host using lockdown mode? (Choose two.)

- A. Add the host to a dedicated security group in Active Directory.
- B. Disable SSH and the ESXi Shell.
- C. Enable "Strict Lockdown Mode" to restrict all direct access to the host.
- D. Navigate to the host's settings in the vSphere Client.
- E. Reboot the host to apply the lockdown settings.

Answer: C,D

Explanation:

To enable lockdown mode, you first need to navigate to the ESXi host's settings in the vSphere Client, where you can configure security settings such as lockdown mode.

Enabling "Strict Lockdown Mode" restricts all direct access to the ESXi host, ensuring that only authorized users can manage the host through vCenter and preventing direct login via the ESXi console or SSH.

NEW QUESTION # 93

Which is the appropriate first action to take to resolve dropped network packets on an ESXi host?

- A. Enable Storage I/O Control
- B. Migrate VMs to another data store
- C. Increase the CPU and memory allocation for VMs
- D. Check physical network switch configuration

Answer: D

Explanation:

Dropped network packets are often caused by misconfigurations or issues at the physical network layer. Checking the physical network switch configuration is the first step to ensure that the network settings, such as VLANs, uplinks, and port configurations, are correctly set up. This ensures proper connectivity and traffic flow for the ESXi host and the VMs.

NEW QUESTION # 94

.....

PremiumVCEDump has assembled a brief yet concise study material that will aid you in acing the VMware vSphere Foundation 5.2 Administrator (2V0-12.24) exam on the first attempt. This prep material has been compiled under the expert guidance of 90,000 experienced VMware professionals from around the globe. PremiumVCEDump offers the complete package that includes all exam questions conforming to the syllabus for passing the VMware vSphere Foundation 5.2 Administrator (2V0-12.24) exam certificate in the first try.
