SolarWinds Hybrid Cloud Observability Network Monitoring Exam Sample Questions (Q133-Q138):

NEW QUESTION # 133

Network wide node and interface changes were recently made to several fields including names and IP addresses on nodes, captions, and aliases for their interfaces. Those changes are not updated in the hybrid cloud observability web console, even if a new polling is forced.

What should be done to resolve the issue?

- A. Manually update the changed information in each poller.
- B. Run a rediscovery on the node, which will also update the interfaces.
- C. Run a rediscovery on both nodes and interfaces to refresh the data.
- D. Delete and re-add each of the nodes and their interfaces.

Answer: C

NEW QUESTION # 134

Which two of the following locations can be checked for network hardware health functionality? (Choose two.)

- A. manage sensors
- B. node properties
- C. list resources
- D. device view

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

List Resources: When you add or manage a node, the List Resources page allows you to enable or verify hardware health monitoring options.

Manage Sensors: This section allows you to directly manage the hardware sensors (such as fans, power supplies, and temperature sensors) that report health status.

Device view and node properties are not the primary locations for enabling or managing hardware health sensors.

NEW QUESTION # 135

A poller is to be built that will add two values together to show a single value in the web console using the universal device poller (UDP) tool. How would this be accomplished?

- A. UDP tool does not support more than one OID per poller, another tool is needed
- B. add both object IDs (OIDs) to the poller and combine values in a single value for the web console
- C. UDP tool does not support more than one OID per poller, another OID is needed
- D. build a poller for each OID then use transform results to combine values from the two pollers

Answer: D

NEW QUESTION # 136

Flow traffic in the web console is reviewed and it is noted that there is unclassified traffic. Which two of the following reasons are possible causes for the issue? (Choose two.)

- A. The flows from the device are generated by an application not mapped in hybrid cloud
- B. The flows from the device are set to ingress instead of egress.
- C. The flows from the device are generated by an application using a different port than what is mapped in HCO.
- D. The flows from the device are not supported by HCO.

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SolarWinds identifies and classifies flow traffic based on application and port mapping in the platform.

"Unclassified traffic in flow charts often occurs when an application is not mapped in the system, or when the application uses a port that is not defined in the SolarWinds Hybrid Cloud Observability (HCO) application mapping database. Flows from unsupported devices or flow direction do not cause unclassified application traffic-rather, they will not be collected or will be marked as unknown flows." Thus, unclassified traffic can result from new or custom applications or changes in port usage that are not reflected in the configuration.
