Cloud Security Alliance (CSA) is an organization that provides education, certification, and research in the field of cloud computing security. One of the certifications offered by the CSA is the Certificate of Cloud Security Knowledge (CCSK), which is a vendor-neutral exam that tests an individual's knowledge of cloud security concepts and best practices. The CCSK Certification is recognized globally and is an excellent way for professionals to demonstrate their expertise in cloud security.

The CCSK certification program is vendor-neutral, meaning it is not tied to any specific cloud platform or technology. It is suitable for security professionals, IT architects, and cloud service providers who are looking to deepen their understanding of cloud security and stay up-to-date with the latest best practices. CCSK exam is administered online and consists of 60 multiple-choice questions that must be completed in 90 minutes. Upon completion, individuals receive a certificate that demonstrates their proficiency in cloud security knowledge and is valid for three years.

Difficulty in Writing Certificate of Cloud Security Knowledge (CCSK) Exam

The Certificate of Cloud Security Knowledge (CCSK) exam is an open book exam. It may be an open-book, but don't underestimate this exam's complexity. The passing rate is 62% for this exam. We find that, depending on their experience, there is no one place where students struggle most. Someone in that segment who has never worked in network security will struggle more while the network security engineer will struggle . As this offers an overview of each of these regions, the best way to plan is to review the CSA Guidance.

Learning everything and then dropping all of it after the exam is over. The cloud travels rapidly, and you have to keep up with it. Just the beginning of your cloud protection journey should be the CCSK. This exam requires lots of practice to complete on time and for writing accurate solutions. Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q226-Q231):

NEW QUESTION # 226
The characteristics and traits of an individual that when aggregated could reveal the identity of that person. are known as:

- **A. Indirect Identifiers**
- B. Indirect Identity Marks
- C. Indirect indicators
- D. Indirect identifications

Answer: A

Explanation:
Indirect identifiers typically consist of demographic or socioeconomic information, dates, or events.
Although each standalone indirect identifier cannot identify the individual, the risk is that combining a number of indirect identifiers with external data can result in exposing the subject of the information.
For example, imagine a scenario in which users were able to combine search engine data, coupled with online streaming recommendations to tie back posts and recommendations to individual users on a website.

NEW QUESTION # 227
What is a key advantage of using Policy-Based Access Control (PBAC) for cloud-based access management?

- A. PBAC ensures that access policies are consistent across all cloud providers and platforms.
- B. PBAC eliminates the need for defining and managing user roles and permissions.
- **C. PBAC allows enforcement of granular, context-aware security policies using multiple attributes.**
- D. PBAC is easier to implement and manage compared to Role-Based Access Control (RBAC).

Answer: C

Explanation:
PBAC enables highly specific access control based on multiple attributes, enhancing flexibility and security in cloud environments.

NEW QUESTION # 228
Which of the following is a primary purpose of establishing cloud risk registries?

- A. To monitor real-lime cloud performance
- **B. Identify and manage risks associated with cloud services**
- C. To manage and update cloud account credentials
- D. In order to establish cloud service level agreements

Answer: B

Explanation:
A cloud risk registry is primarily used to identify and manage risks associated with cloud services. It serves as a tool for documenting, tracking, and assessing potential risks to the organization that arise from using cloud services. This includes risks related to security, compliance, availability, and performance. The risk registry helps organizations prioritize and mitigate these risks effectively to ensure the security and resilience of their cloud infrastructure.

Establishing SLAs is related to cloud contract management but not the primary purpose of a risk registry.

Monitoring real-time cloud performance is a performance monitoring task, not the focus of a risk registry.

Managing cloud account credentials is an aspect of identity and access management, not related to risk registries.

NEW QUESTION # 229

Which of the following statements best defines the "authorization" as a component of identity, entitlement, and access management?

- A. Giving a third party vendor permission to work on your cloud solution
- B. Checking data storage to make sure it meets compliance requirements
- C. Establishing/asserting the identity to the application
- D. Enforcing the rules by which access is granted to the resources
- E. The process of specifying and maintaining access policies

Answer: C

NEW QUESTION # 230

If the management plane has been breached, you should confirm the templates/configurations for your infrastructure or applications have not also been compromised.

- A. False
- B. True

Answer: A

NEW QUESTION # 231
