Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q188-Q193):

NEW QUESTION # 188

You are designing a data pipeline in Snowflake where raw data is ingested into a staging schema, transformed, and then loaded into a production schema. You want to ensure that only authorized users can access the data in the production schema, and that data analysts can only query the data but not modify it. You have two roles: 'DATA ENGINEER (responsible for loading and transforming data) and 'DATA ANALYST (responsible for querying data). Which of the following sets of grants provide the MOST secure and appropriate access control for this scenario? Assume that 'PRODUCTION DB' and 'STAGING DB' databases already exist.

- A. Option C
- B. Option E
- C. Option A
- D. Option B
- E. Option D

Answer: E

Explanation:

Option D provides the most secure and appropriate access control. It uses 'GRANT SELECT ON FUTURE TABLES' for DATA ANALYST ensuring they automatically have access to new tables without needing explicit grants. It also uses 'GRANT INSERT, UPDATE, DELETE ON FUTURE TABLES' for 'DATA_ENGINEER so they are able to load and transform data to any new table within Option A only grants select on current tables. Option B grants insert, update and delete on all current tables which is not ideal. Option C grants ALL privileges which violates principle of least privilege. Option E does not grand any rights to schema for DATA_ANALYST , it will not work. Also, does not cover future grants.

NEW QUESTION # 189

What most accurately describe Snowflake?

- A. A Transactional database
- B. An AI data cloud Platform
- C. An ETL Tool
- D. A data warehouse software

Answer: B

Explanation:

Snowflake is best described as an AI Data Cloud Platform. While Snowflake originated as a cloud data warehouse, its capabilities have expanded to include secure data sharing, application development, machine learning workloads, unstructured data processing, Snowpark, and integrated LLM/AI functions (such as Snowflake Cortex and Streamlit). This broad ecosystem supports analytic workloads, governance, multi-cloud architecture, and AI-driven applications. It is not simply an ETL tool or a transactional database.

NEW QUESTION # 190

Which command can be used to query the Information Schema in Snowflake to retrieve a list of tables?

- A. SELECT * FROM PUBLIC.INFORMATION_SCHEMA;

- B. SELECT * FROM INFORMATION_SCHEMA.TABLES;
- C. SELECT * FROM PUBLIC.TABLES;
- D. SELECT * FROM INFORMATION_SCHEMA.COLUMNS;

Answer: B

Explanation:

Snowflake's INFORMATION_SCHEMA contains metadata views about databases, schemas, tables, columns, constraints, and other objects. To retrieve a list of tables, the correct view is INFORMATION_SCHEMA.

TABLES, which returns:

- * Table name
- * Schema name
- * Table type (BASE TABLE, VIEW, MATERIALIZED VIEW)
- * Creation timestamp
- * Owner and retention properties

The query:

```
SELECT * FROM INFORMATION_SCHEMA.TABLES;
```

returns metadata for all tables in the current database context.

INFORMATION_SCHEMA.COLUMNS returns column-level metadata, not table listings.

PUBLIC.INFORMATION_SCHEMA is invalid-INFORMATION_SCHEMA is not inside PUBLIC schema.

PUBLIC.TABLES is not a system object unless created manually.

NEW QUESTION # 191

What type of mode available in PARSE_DOCUMENT function? (Select two)

- A. OCR
- B. LAYOUT
- C. OMR
- D. CONTENT

Answer: A,B

Explanation:

The PARSE_DOCUMENT function offers two primary processing modes: OCR and LAYOUT, each designed for different document-intelligence tasks.

OCR (Optical Character Recognition) mode extracts raw text from scanned or image-based documents. This is ideal for contracts, scanned PDFs, receipts, manuals, and any scenario where the primary goal is text extraction. OCR focuses on textual content without preserving document structure.

LAYOUT mode extracts both text and structural context, including tables, section groupings, paragraph blocks, and visual positioning. This provides layout-aware data, making it vital for downstream use cases such as Retrieval-Augmented Generation (RAG) pipelines, structured extraction, and content summarization while retaining relationships between document components.

CONTENT is not a mode-it is a JSON key in output. OMR (Optical Mark Recognition) is not supported within PARSE_DOCUMENT.

NEW QUESTION # 192

Which of the following types of data can be found on Snowflake Marketplace? (Choose any 3 options)

- A. Financial market data
- B. Third-party data sets
- C. Proprietary data sets
- D. Public data sets

Answer: A,B,D

Explanation:

Snowflake Marketplace serves as a centralized catalog where providers publish ready-to-use datasets, models, and applications across industries. It includes:

Public datasets, such as demographics, weather, healthcare statistics, and government data.

Financial market datasets, including equities, commodities, macroeconomic indicators, and pricing feeds from major financial data

vendors.

Third-party datasets supplied by external organizations specializing in geospatial intelligence, retail analytics, marketing insights, healthcare, census data, and more.

"Proprietary datasets" are internal to organizations and typically not published on the public Marketplace unless the owner chooses to list them. Marketplace listings are curated and governed.
