In addition to the JN0-460 study materials, our company also focuses on the preparation and production of other learning materials. If you choose our JN0-460 study materials this time, I believe you will find our products unique and powerful. Then you don't have to spend extra time searching for information when you're facing other exams later, just choose us again. As long as you face problems with the exam, our company is confident to help you solve. Give our JN0-460 Study Materials a chance is to give you a chance to succeed.

Juniper JN0-460 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Wired Assurance Provisioning or Deployment: This section of the exam measures the skills of Network Deployment Specialists and focuses on the provisioning and deployment processes of Wired Assurance. It includes the essential steps and options involved in setting up networks, from configuration templates to deployment methodologies. Candidates learn about provisioning procedures, supported architectures, and the use of site variables to streamline automation and consistency across wired infrastructures.

Topic 2	<ul style="list-style-type: none"> • Wired Assurance Fundamentals: This section of the exam measures the skills of Network Support Engineers and covers the foundational elements of Wired Assurance within the MistAI ecosystem. It introduces candidates to key concepts such as supported devices, solution architecture, and the main features and components that define Wired Assurance functionality. Additionally, it highlights how MistAI accounts, analytics, and subscriptions integrate to deliver intelligent insights for network performance and operations.
Topic 3	<ul style="list-style-type: none"> • Campus Fabric Architecture: This section of the exam measures the skills of Network Design Engineers and focuses on understanding and deploying Campus Fabric Architectures. It introduces essential design concepts such as EVPN multihoming, IP Clos architecture, and micro-segmentation. The section also compares CRB and ERB models, explains scaling requirements, and highlights how the Campus Fabric Core-Distribution design supports high-performance, scalable, and secure enterprise networks.
Topic 4	<ul style="list-style-type: none"> • Wired Assurance Management or Operations: This section of the exam measures the skills of Network Operations Engineers and focuses on the management and operational aspects of Wired Assurance. It covers switch management, port profiles, and dynamic port configuration to ensure optimal network performance. The section also explores service-level expectations, client insights, and the use of APIs for improved monitoring and automation. Candidates gain an understanding of how MistAI enables proactive management and predictive troubleshooting to maintain service quality.
Topic 5	<ul style="list-style-type: none"> • Campus EVPN-VXLAN: This section of the exam measures the skills of Data Center Network Engineers and explores the key principles of VXLAN and EVPN technologies. Candidates learn about Layer 2 tunneling, data and control plane operations, and the functions of VTEPs and VXLAN gateways. Additionally, it covers advanced EVPN concepts such as multipath routing, route types, and identifiers. The section concludes with a focus on MAC learning and policy applications to ensure efficient, scalable, and resilient network fabrics.

JN0-460 Latest Braindumps Sheet - JN0-460 Latest Learning Material

No matter you are exam candidates of high caliber or newbies, our Juniper JN0-460 exam quiz will be your propulsion to gain the best results with least time and reasonable money. Not only because the outstanding content of Mist AI Wired, Specialist (JNCIS-MistAI-Wired) JN0-460 Real Dumps that produced by our professional expert but also for the reason that we have excellent vocational moral to improve our Mist AI Wired, Specialist (JNCIS-MistAI-Wired) JN0-460 learning materials quality.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q64-Q69):

NEW QUESTION # 64

Which component performs VXLAN encapsulation and de-encapsulation?

- **A. VTEP**
- B. root bridge
- C. WXLAN policy
- D. VLAN

Answer: A

Explanation:

In an EVPN-VXLAN architecture, the VXLAN Tunnel Endpoint (VTEP) is responsible for encapsulating and de-encapsulating Layer 2 Ethernet frames into VXLAN packets that traverse the IP underlay.

"Each device participating in a VXLAN overlay operates as a VXLAN Tunnel Endpoint (VTEP). The VTEP encapsulates Ethernet frames into VXLAN headers for transmission and de-encapsulates VXLAN packets back into Ethernet frames upon receipt."

Option A: Incorrect - VLAN is a Layer 2 construct, not responsible for encapsulation.

Option B: Correct - VTEP handles VXLAN encapsulation and de-encapsulation.

Option C: Incorrect - root bridge pertains to STP, not VXLAN.

Option D: Incorrect - WXLAN policy is not a valid networking term in Juniper documentation.

NEW QUESTION # 65

In MistAI wired assurance, what is a key benefit of the AI-driven operations?

- A. Decreased network visibility
- **B. Proactive identification and resolution of issues**
- C. Requirement for more specialized networking staff
- D. Increased network troubleshooting time

Answer: B

NEW QUESTION # 66

Which statement is correct about the VXLAN data plane?

- A. The data plane advertises the MAC addresses of end-user devices.
- B. The data plane learns the MAC addresses of end-user devices.
- **C. The data plane encapsulates the traffic.**
- D. The data plane learns the IP addresses of end-user devices.

Answer: C

Explanation:

VXLAN (Virtual Extensible LAN) uses an overlay encapsulation method to carry Layer-2 frames over an IP underlay. This functionality is part of the data plane, which is responsible for packet forwarding and encapsulation/decapsulation.

"In an EVPN-VXLAN fabric, the control plane (via BGP EVPN) learns and advertises MAC and IP information, while the data plane encapsulates and forwards traffic using VXLAN tunnels between VTEPs." Option A is incorrect: IP learning happens in the control plane, not the data plane.

Option B is incorrect: MAC advertisement is done in the control plane through EVPN route types.

Option D is incorrect: MAC learning is handled by EVPN control plane, not the VXLAN data plane.

Option C is correct: the VXLAN data plane encapsulates the traffic in UDP tunnels between VTEPs.

NEW QUESTION # 67

EVPN multihoming supports _____, allowing multiple connections to be used simultaneously for redundancy and load balancing.

- A. Active-standby mode
- B. Passive mode
- **C. All active mode**
- D. Single active mode

Answer: C

NEW QUESTION # 68

Which three parameters should be provided through DHCP when using ZTP during a Mist AI greenfield deployment? (Choose three.)

- **A. IP address**
- **B. name server**

- Answer: A,B,C**
