

BIG-IP Administration Install, Initial Configuration, and Upgrade valid torrent & F5CAB1 prep dumps & BIG-IP Administration Install, Initial Configuration, and Upgrade latest vce

Score Report

F5CAB1 - BIG-IP Administration
Install, Initial Configuration, and
Upgrade

Exam Score Report

Date Tested: 1/1/2026

Candidate: [REDACTED]
[REDACTED]

Thank you for completing the
F5CAB1 - BIG-IP Administration
Install, Initial Configuration, and
Upgrade exam. Based on preliminary
exam scoring, you have **Passed**.

This is a preliminary result. Your
exam results can be found in the
Education Services Portal within 24
hours.

P.S. Free & New F5CAB1 dumps are available on Google Drive shared by DumpsQuestion: https://drive.google.com/open?id=1i-G8ZDj1z1Voa6sOywFDuMTyT_nqXPwc

Our F5CAB1 study materials are easy to be mastered and boost varied functions. We compile Our F5CAB1 preparation questions elaborately and provide the wonderful service to you thus you can get a good learning and preparation for the F5CAB1 exam. Now there are introduces on the web for you to know the characteristics and functions of our F5CAB1 Training Materials in detail. And

we also have free demo on the web for you to have a try on our F5CAB1 exam questions. You will be touched by our great quality of F5CAB1 study guide.

F5 F5CAB1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • BIG IP Administration Data Plane Configuration: This section of the exam measures skills of System Administrators and covers configuring BIG IP objects that control data plane behavior. It focuses on setting up virtual servers, pools, nodes, monitors, and profiles so that applications are delivered reliably and efficiently according to design requirements.
Topic 2	<ul style="list-style-type: none"> • BIG IP Administration Install Initial Configuration and Upgrade: This section of the exam measures skills of System Administrators and covers the lifecycle tasks for deploying and maintaining a BIG IP system. It includes installing the platform, performing initial setup, applying licenses, configuring basic networking, and planning and executing software upgrades and hotfixes.
Topic 3	<ul style="list-style-type: none"> • BIG IP Administration Data Plane Concepts: This section of the exam measures skills of Network Administrators and covers how BIG IP handles application traffic on the data plane. It includes understanding flow of traffic, key data path components, basic concepts of load balancing, and how security and performance features affect user traffic.
Topic 4	<ul style="list-style-type: none"> • BIG IP Administration Control Plane Administration: This section of the exam measures skills of System Administrators and covers managing the control plane where BIG IP is configured and administered. It includes working with user accounts, roles, device settings, configuration management, and using the graphical interface and command line for daily administrative tasks.
Topic 5	<ul style="list-style-type: none"> • BIG IP Administration Support and Troubleshooting: This section of the exam measures skills of Network Administrators and covers identifying and resolving common issues that affect BIG IP operation. It focuses on using logs, statistics, diagnostic tools, and basic troubleshooting methods to restore normal traffic flow and maintain stable application delivery.

F5CAB1 Exam Study Guide Materials: BIG-IP Administration Install, Initial Configuration, and Upgrade is high pass-rate - DumpsQuestion

To give you an idea before the DumpsQuestion exam questions purchase, we are offering a free F5 F5CAB1 exam questions demo facility. This demo download facility is available for all three DumpsQuestion exam question formats. Moreover, we also offer up to 1 year of F5CAB1 Free Exam Questions updates. If you think the F5CAB1 exam questions can help you in F5CAB1 exam preparation then take your buying decision and start preparation. Best of luck!!!

F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q42-Q47):

NEW QUESTION # 42

An administrator is in the process of reactivating the license using the interface displayed in the exhibit.

System » License » Re-activate...

Summary

General Properties

Base Registration Key: WQZPR-XYLFT-NMZPQ-GLKXZ-JVMXNCL [Revert]

Add-On Key: [] [Add]

Add-On Registration Key List: JNDPMXY-JFXLHAM

[Edit] [Delete]

Activation Method: Automatic (requires outbound connectivity) Manual

License Comparison: Enable License Comparison

[Cancel] [Next...]

What is the address of the license server to which the BIG-IP device must be able to establish an outbound connection in order to use the Automatic Activation Method?

- A. activate.f5.com
- B. license.f5.com
- C. ask.f5.com
- D. callhome.f5.com

Answer: A

Explanation:

When you choose Automatic as the activation method in the License > Re-activate screen, the BIG-IP device itself contacts F5's license activation service over the Internet.

For successful automatic activation:

The BIG-IP must have outbound network connectivity (typically via the management interface).

DNS resolution and routing must allow it to reach the F5 license activation host (the one shown in option D).

The device sends its dossier and registration key to that service and receives an updated license file in return, which is then installed automatically.

The other hostnames in the options are not used by BIG-IP for license activation, so they cannot be correct in the context of Automatic Activation.

NEW QUESTION # 43

When using the tmsh shell of a BIG-IP system, which command will display the management-ip address?

- A. show /sys management-ip
- B. list /sys management-ip
- C. run /util bash ifconfig mgmt

Answer: B

Explanation:

Within the BIG-IP Traffic Management Shell (tmsh), system configuration objects-including the management IP-are organized under the /sys hierarchy. The management IP address is a configurable property stored in the system configuration and can be viewed using the tmsh list command, which displays configuration objects and their currently assigned values.

Why "list /sys management-ip" is correct

* The list command in tmsh is used to display configured system values , not runtime statistics.

* The object that holds the management IP settings on BIG-IP systems is located at: /sys management-ip

* Running the command: `list /sys management-ip` will reveal the settings for the management IP interface, including the address, netmask, and any associated attributes.

* This is the standard method used during system setup and verification to confirm the management IP configuration.

This behavior aligns with BIG-IP administration procedures, where configuration information is retrieved using `list`, while operational data is retrieved using `show`.

Why the other options are incorrect

A). `run /util bash ifconfig mgmt`

* This command enters the Bash shell, then runs `ifconfig` to display the management interface.

* While this can show the management interface address, it is not a tmsh-native command, and the question specifically asks for a tmsh command.

* Administrators use tmsh directly for configuration display rather than leaving the shell.

C). `show /sys management-ip`

* The show command displays statistics or operational data, not configuration values.

* The management-ip object does not maintain statistics; therefore show does not return the configuration details required.

* Only the list command reveals stored configuration data such as IP address and netmask.

NEW QUESTION # 44

An F5 BIG-IP Administrator is asked to report which modules are provisioned on the BIG-IP. In which two ways can this be done? (Choose two.)

- A. Via TMSH with `list /sys provision`
- B. Via the GUI at System -> Resource Provisioning -> Module Allocation
- C. Via the GUI at Statistics -> Module Statistics -> System
- D. Via TMSH with `show /sys provision`

Answer: A,B

Explanation:

Provisioning determines:

Which BIG-IP modules are enabled (LTM, ASM, APM, AFM, DNS, etc.)

Their provisioning levels (None, Minimal, Nominal, Dedicated)

Two accurate ways to view provisioning settings are:

A). GUI -- System -> Resource Provisioning -> Module Allocation

This is the primary GUI screen showing:

All modules

Their provisioning level

System resource distribution impact

Administrators commonly use this page to confirm or change module provisioning.

D). TMSH -- `list /sys provision`

This tmsh command displays each module and its provisioning level:

```
sys provision ltm { level nominal }
```

```
sys provision asm { level none }
```

...

This is the authoritative CLI method for checking module provisioning configurations.

NEW QUESTION # 45

A BIG-IP device will be dedicated to functioning as a WAF, requiring only the ASM module to be provisioned.

What provisioning level will ensure that the system allocates all CPU, memory, and disk resources to this module exclusively?

- A. Comprehensive
- B. Maximal
- C. Dedicated
- D. Nominal

Answer: C

Explanation:

Provisioning defines how BIG-IP allocates system resources to modules.

The provisioning levels include:

- * Dedicated - allocates all CPU, memory, and disk resources to a single module
- * Nominal - standard resource allocation balanced with other modules
- * Minimal - lowest level, used for basic utility needs
- * None - module disabled
- * Comprehensive / Maximal - not valid TMOS provisioning levels

Why "Dedicated" is correct

When a BIG-IP device is intended to run only ASM (Web Application Firewall), the recommended way to maximize performance is to provision the module at Dedicated level.

With ASM: Dedicated :

- * ASM receives the entire hardware capacity
- * No other modules can or should be provisioned
- * This is explicitly recommended when a device is used solely as a WAF platform Why other options are incorrect B).

Comprehensive / C. Maximal

- * These are not valid provisioning modes in BIG-IP.
- * TMOS supports: Nominal, Minimal, Large (module-specific), and Dedicated.

D). Nominal

- * Shares resources with other modules
- * Does not provide full system performance
- * Not suitable when exclusive resource allocation is required

Thus, Dedicated is the correct provisioning choice.

NEW QUESTION # 46

Which of the following are resource allocation (provisioning) settings for BIG-IP modules?
(Choose two.)

- A. Nominal
- B. Dedicated
- C. Limited
- D. Maximum

Answer: A,B

Explanation:

BIG-IP module provisioning determines how CPU, memory, and disk resources are allocated to each licensed module. F5 defines a specific set of supported provisioning levels.

Valid provisioning (resource allocation) settings

Nominal

- * Allocates a standard, balanced amount of system resources to a module.
- * Intended for typical production deployments where multiple modules may be provisioned at the same time.

Dedicated

- * Allocates all available system resources to a single module.
- * Used when the BIG-IP device is dedicated to running only one module (for example, ASM-only or APM-only deployments).
- * No other modules can be provisioned when one is set to Dedicated.

These two options are valid and supported provisioning levels.

Why the other options are incorrect

Maximum

- * This is not a valid BIG-IP provisioning level.
- * BIG-IP does not use "Maximum" as a resource allocation setting.

Limited

- * This is also not a supported provisioning level.
- * BIG-IP uses levels such as None, Minimal, Nominal, and Dedicated (module-dependent), not Limited.

NEW QUESTION # 47

.....

We value every customer who purchases our F5CAB1 test material and we hope to continue our cooperation with you. Our F5CAB1 test questions are constantly being updated and improved so that you can get the information you need and get a better experience. Our F5CAB1 test questions have been following the pace of digitalization, constantly refurbishing, and adding new

things. I hope you can feel the F5CAB1 Exam Prep sincerely serve customers. And the pass rate of our F5CAB1 training guide is high as 99% to 100%, you will be able to pass the F5CAB1 exam with high scores.
