SAP C-BCBTP-2502認證資料 & C-BCBTP-2502權威考題

每個人都有自己的夢想，你夢想呢，是升職、是加薪或者等等。我的夢想的通過SAP的C-BCBTP-2502考試認證，我覺得有了這個認證，所有的問題都不是問題，不過想要通過這個認證是比較困難，不過不要緊，我選擇PDFExamDumps SAP的C-BCBTP-2502考試培訓資料，它可以幫助我實現我的夢想，如果也有IT夢，那就趕緊把它變成現實吧，選擇PDFExamDumps SAP的C-BCBTP-2502考試培訓資料，絕對信得過。

最新的 SAP Certified Associate C-BCBTP-2502 免費考試真題 (Q21-Q26):

問題 #21

How does SAP BTP support predictive analytics in business decision-making?

Note: There are 3 correct answers to this question.

- A. By restricting analytics to financial data.
- **B. By leveraging AI and machine learning models.**
- **C. By automating data visualization.**
- **D. By using SAP Data Intelligence for real-time insights.**
- E. By requiring only manual data input.

答案：B,C,D

解題說明:

SAP BTP provides a comprehensive ecosystem for predictive analytics, moving business decision-making from a reactive to a proactive state. This is achieved through three primary mechanisms. First, by leveraging AI and machine learning models (Option A), BTP services like SAP AI Core allow developers to train models on historical business data to predict future trends, such as customer churn or equipment failure.

Second, the platform automates data visualization (Option B) through SAP Analytics Cloud. This ensures that complex predictive insights are presented in an intuitive, dashboard-driven format that business leaders can easily interpret and act upon, rather than sifting through raw spreadsheets.

Third, the platform utilizes SAP Data Intelligence for real-time insights (Option D). This component orchestrates data from across diverse sources-both SAP and non-SAP-ensuring that the predictive models are fed with the most current and relevant information. By integrating these three pillars-intelligence (AI /ML), visualization (Analytics), and orchestration (Data Intelligence)-SAP BTP transforms the SAP Business Suite into a forward-looking enterprise system. This allows organizations to anticipate market shifts, optimize their supply chains, and personalize customer interactions with a level of precision that was previously impossible, ultimately driving better business outcomes and long-term sustainability.

問題 #22

Which SAP BTP capability enables businesses to deploy AI-driven chatbots?

- A. SAP Business Process Intelligence
- **B. SAP Conversational AI**
- C. SAP Fiori
- D. SAP Event Mesh

答案: B

解題說明:

To improve user experience and automate customer or employee interactions, SAP BTP offers SAP Conversational AI. This service provides an end-to-end platform for building, training, and monitoring intelligent chatbots (digital assistants). These chatbots utilize Natural Language Processing (NLP) to understand human language, identify user intent, and extract relevant entities from a conversation. Unlike simple rule-based scripts, these AI-driven bots can learn over time and provide a more intuitive, human-like interaction.

In the context of the SAP Business Suite, SAP Conversational AI is positioned as a powerful tool for scaling business operations without increasing headcount. For example, a chatbot can be integrated into SAP S/4HANA to help users check invoice statuses or into SAP SuccessFactors to answer common HR policy questions. This capability shifts the burden of routine inquiries away from human agents to automated systems that are available 24/7. While SAP Fiori provides the visual design language and SAP Event Mesh handles asynchronous messaging between systems, SAP Conversational AI is the specific component responsible for the "intelligence" and "interaction" layers of the platform, enabling a more conversational and efficient enterprise environment.

問題 #23

Which SAP BTP solution can be used to streamline handling of blocked sales orders?

- A. SAP Analytics Cloud
- **B. SAP Build Process Automation**
- C. SAP Integration Suite
- D. SAP Datasphere

答案: B

解題說明:

Blocked sales orders often represent a significant bottleneck in the "Order-to-Cash" process, usually requiring manual intervention from credit managers or sales administrators. SAP Build Process Automation is the ideal BTP solution to streamline this task. It combines the capabilities of workflow management and Robotic Process Automation (RPA) to automate the evaluation and release (or escalation) of these orders based on predefined business rules and real-time data from SAP S/4HANA.

By positioning SAP Build Process Automation as the solution, businesses can implement "exception-based" management. Instead of a human reviewing every blocked order, the BTP service can automatically release orders that meet certain low-risk criteria or route high-value/high-risk blocks to the appropriate manager's mobile device for instant approval. This significantly reduces the "Day Sales Outstanding" (DSO) and improves customer satisfaction by accelerating fulfillment. This approach highlights the value of SAP BTP

as an extension layer for the SAP Business Suite; it allows for the optimization of core ERP processes without the need for complex, custom ABAP development, maintaining a "clean core" while achieving high levels of operational efficiency.

問題 #24

Which SAP BTP service allows businesses to create low-code/no-code applications?

- A. SAP Concur
- **B. SAP Build Apps**
- C. SAP Business Network
- D. SAP BusinessObjects

答案： B

解題說明：

To accelerate digital transformation, SAP has introduced the SAP Build portfolio on BTP, which is specifically designed to democratize application development. SAP Build Apps (formerly AppGyver) is the primary service within this portfolio that enables the creation of enterprise-grade applications using a no-code visual environment. This service allows users to build sophisticated user interfaces for mobile and web applications by simply dragging and dropping components. It also includes a visual logic editor, which eliminates the need to write traditional code for defining how the application behaves.

The strategic importance of SAP Build Apps within the SAP Business Technology Platform is its ability to reduce the backlog of IT departments. By allowing business experts—who understand the process but may not know how to code—to build their own solutions, SAP ensures that innovation can happen at the "front lines" of the business. These apps can easily be connected to SAP S/4HANA or other backend systems through secure APIs, ensuring that data integrity is maintained. This contrasts with tools like SAP BusinessObjects, which is focused on business intelligence and reporting, or SAP Concur, which is a specific SaaS application for travel and expense management. SAP Build Apps is a foundational service for positioning BTP as an agile platform for rapid extension and innovation.

問題 #25

What is a competitive advantage of SAP BTP for businesses?

- A. Eliminates the need for AI-driven automation.
- **B. Provides a unified platform for AI, analytics, and automation.**
- C. Prevents integration with multi-cloud environments.
- D. Limits businesses to SAP ERP-only solutions.

答案： B

解題說明：

The primary competitive advantage of SAP BTP lies in its unified nature, bringing together AI, analytics, integration, and automation into a single cohesive platform. Many organizations struggle with "point solutions"—using one vendor for AI, another for database management, and a third for integration. This fragmentation creates technical debt and data silos. SAP BTP solves this by providing a consistent set of tools and a shared data model, which allows for faster innovation and a lower total cost of ownership.

By having these capabilities on a single platform, businesses can create "end-to-end" intelligent scenarios. For example, a company can use Integration Suite to pull data from a third-party CRM, SAP HANA Cloud to process that data in real-time, SAP AI Core to predict customer behavior, and SAP Build Process Automation to trigger a marketing campaign based on those predictions. This level of cross-functional orchestration is difficult to achieve with fragmented systems. Positioning SAP BTP as the "technological foundation" allows businesses to focus on business outcomes rather than managing infrastructure, giving them a significant edge in agility and speed-to-market compared to competitors using traditional, siloed architectures.
