2024 Identity-and-Access-Management-Architect Valid Exam Tips: Salesforce Certified Identity and Access Management Architect

2025 Latest BraindumpsPrep Identity-and-Access-Management-Architect PDF Dumps and Identity-and-Access-Management-Architect Exam Engine Free Share: [https://drive.google.com/open?id=1yx8PcC-CjIInmE3vpg\\_8\\_dSprDGNARf0](https://drive.google.com/open?id=1yx8PcC-CjIInmE3vpg_8_dSprDGNARf0)

BraindumpsPrep Salesforce Identity-and-Access-Management-Architect test answers are the most effective and we guarantee your success in the first attempt. If you do not pass Salesforce Identity-and-Access-Management-Architect exam, we will give you a FULL REFUND of your purchasing fee. Failure in exam will not affect your finance. On request we can provide you with another exam of your choice absolutely free of cost. Think you! What do you have to lose? Salesforce Identity-and-Access-Management-Architect Test Answers are the latest and 100% guarantee to pass your Identity-and-Access-Management-Architect exam.

Salesforce Identity-and-Access-Management-Architect Certification is an important credential for professionals who want to demonstrate their expertise in the field of IAM architecture. Salesforce Certified Identity and Access Management Architect certification is designed for those who have a deep understanding of the Salesforce platform and its various IAM features, and who are able to design IAM solutions that meet the needs of different types of organizations. Candidates are expected to have a thorough knowledge of IAM technologies, as well as a good understanding of the various types of users and their associated permissions and roles.

Salesforce Certified Identity and Access Management Architect certification is an excellent investment for architects who want to specialize in Salesforce IAM. It demonstrates to employers and clients that you have the skills and knowledge required to design and implement complex IAM solutions in a Salesforce environment. It is also an excellent way to differentiate yourself from other

architects and to advance your career in the Salesforce ecosystem. If you are an experienced architect with a strong background in Salesforce security and IAM, the Salesforce Certified Identity and Access Management Architect certification is a natural next step in your career progression.

## **Identity-and-Access-Management-Architect Latest Braindumps - Reliable Identity-and-Access-Management-Architect Test Questions**

As you know, opportunities are reserved for those who are prepared. Everyone wants to stand out in such a competitive environment, but they don't know how to act. Maybe our Salesforce Certified Identity and Access Management Architect exam questions can help you. Having a certificate may be something you have always dreamed of, because it can prove that you have a certain capacity. Our learning materials can provide you with meticulous help and help you get your certificate. Our Identity-and-Access-Management-Architect training prep is credible and their quality can stand the test. Therefore, our practice materials can help you get a great financial return in the future and you will have a good quality of life.

### **Salesforce Certified Identity and Access Management Architect Sample Questions (Q154-Q159):**

#### **NEW QUESTION # 154**

Universal Containers (UC) wants to build a custom mobile app for their field reps to create orders in Salesforce. After the first time the users log in, they must be able to access Salesforce upon opening the mobile app without being prompted to log in again. What OAuth flows should be considered to support this requirement?

- **A. Web Server flow with a Refresh Token.**
- **B. User Agent flow with a Refresh Token.**
- C. Mobile Agent flow with a Bearer Token.
- D. SAML Assertion flow with a Bearer Token.

**Answer: A,B**

Explanation:

Explanation

The OAuth 2.0 user-agent flow and the OAuth 2.0 web server flow are both suitable for building a custom mobile app that can access Salesforce data without prompting the user to log in again<sup>1</sup>. Both of these flows use a refresh token that can be used to obtain a new access token when the previous one expires<sup>2</sup>. The user-agent flow uses the Canvas JavaScript SDK to obtain an OAuth token by using the login function in the SDK<sup>2</sup>. The web server flow redirects the user to the Salesforce OAuth authorization endpoint and then obtains an OAuth access token by making a POST request to the Salesforce OAuth token endpoint<sup>2</sup>. The mobile agent flow and the SAML assertion flow are not valid OAuth flows for Salesforce<sup>3</sup>.

References: OAuth Authorization Flows, Mastering Salesforce Canvas Apps, Access Data with API Integration

#### **NEW QUESTION # 155**

Universal Containers (UC) has an existing web application that it would like to access from Salesforce without requiring users to re-authenticate. The web application is owned by UC and the UC team that is responsible for it is willing to add new JavaScript code and/or libraries to the application. What implementation should an Architect recommend to UC?

- **A. Create a Canvas app and use Signed Requests to authenticate the users.**
- B. Add the web application as a ConnectedApp using OAuth User-Agent flow.
- C. Rewrite the web application as a set of Visualforce pages and Apex code.
- D. Configure the web application as an item in the Salesforce App Launcher.

**Answer: A**

Explanation:

Explanation

A Canvas app is a web application that can be embedded within Salesforce and access Salesforce data using the signed request authentication method. This method allows the Canvas app to receive a signed request that contains the context and OAuth token when it is loaded. The Canvas app can use the SDK to request a new or refreshed signed request on demand<sup>2</sup>. This way, the users

do not need to re-authenticate when accessing the web application from Salesforce. References: Requesting a Signed Request, SAML Single Sign-On for Canvas Apps, Mastering Salesforce Canvas Apps

#### NEW QUESTION # 156

Northern Trail Outfitters would like to automatically create new employee users in Salesforce with an appropriate profile that maps to its Active Directory Department.

How should an identity architect implement this requirement?

- A. Make a callout during the login flow to query department from Active Directory to assign the appropriate profile.
- **B. Use the updateUser method in the Just-in-Time (JIT) provisioning registration handler to assign the appropriate profile.**
- C. Use the createUser method in the Just-in-Time (JIT) provisioning registration handler to assign the appropriate profile.
- D. Use a login flow to collect Security Assertion Markup Language attributes and assign the appropriate profile during Just-In-Time (JIT) provisioning.

**Answer: B**

#### NEW QUESTION # 157

A group of users try to access one of Universal Containers' Connected Apps and receive the following error message: "Failed: Not approved for access." What is the most likely cause of this issue?

- **A. The Users do not have the correct permission set assigned to them.**
- B. The Salesforce Administrators have revoked the OAuth authorization.
- C. The User of High Assurance sessions are required for the Connected App.
- D. The Connected App settings "All users mayself-authorize" is enabled.

**Answer: A**

Explanation:

The underlying mechanisms that the UC Architect must ensure are part of the product are Just-in-Time (JIT) provisioning and deprovisioning. JIT provisioning is a process that creates or updates user accounts in Salesforce when users log in with SAML single sign-on (SSO). JIT deprovisioning is a process that disables or deletes user accounts in Salesforce when users are removed from the identity provider (IdP). Both of these processes enable automated provisioning and deprovisioning of users without requiring manual intervention or synchronization. The other options are not valid mechanisms for provisioning and deprovisioning. SOAP API is an application programming interface that allows developers to create, retrieve, update, or delete records in Salesforce. However, SOAP API does not support JIT provisioning or deprovisioning, and requires custom code to implement. Provisioning API is not a standard term for Salesforce, and there is no such API that supports both provisioning and deprovisioning.

#### NEW QUESTION # 158

Universal Container plans to develop a custom mobile app for the sales team that will use Salesforce for authentication and access management. The mobile app access needs to be restricted to only the sales team.

What would be the recommended solution to grant mobile app access to sales users?

- **A. Use connected apps OAuth policies to restrict mobile app access to authorized users.**
- B. Use the permission set license to assign the mobile app permission to sales users.
- C. Add a new identity provider to authenticate and authorize mobile users.
- D. Use a custom attribute on the user object to control access to the mobile app.

**Answer: A**

#### NEW QUESTION # 159

.....

The Salesforce Certified Identity and Access Management Architect (Identity-and-Access-Management-Architect) practice test software also shows changes and improvements done by the candidates on every step during the Identity-and-Access-Management-Architect exam. So this reduces your chance of failure in the actual Identity-and-Access-Management-Architect

Exam. It requires no special plugins to function properly. So just start your journey with BraindumpsPrep and prepare for the Identity-and-Access-Management-Architect exam instantly.
