Free PDF Quiz 2026 GH-900: Fantastic GitHub Foundations Latest Test Cram

2026 Latest Pass4Test GH-900 PDF Dumps and GH-900 Exam Engine Free Share: https://drive.google.com/open?id=100UoZ_MTzJBTqAhvR5wNnre1EzVmwP89

Dear, hurry up to get the 100% pass GH-900 exam study dumps for your preparation. You will get original questions and verified answers for the Microsoft certification. After purchase of the GH-900 exam dumps, you can instant download the GH-900 practice torrent and start your study with no time wasted. The validity and useful GH-900 will clear your doubts which will be in the actual test. When you prepare well with our GH-900 pdf cram, the 100% pass will be easy thing.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	• Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
Topic 2	• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 3	• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.

Topic 4	• Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Topic 5	• Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.

Microsoft GitHub Foundations Sample Questions (Q20-Q25):

NEW QUESTION # 20
GitHub Actions workflows can be directly triggered by which of the following events?
(Each answer presents a complete solution. Choose three.)

- A. Pushing to a GitHub repository
- B. Committing a change to a local git repository
- C. Creating a new repository
- D. Creating an Issue
- E. Disabling a GitHub runner
- F. Adding a comment to a discussion post

Answer: A,D,F

Explanation:
GitHub Actions are automated workflows that can be triggered by various events on GitHub. Some common events that trigger workflows include pushes to a repository, creation of issues, and comments on discussion posts.
Triggering GitHub Actions:
Option D (Pushing to a GitHub repository) is correct because this is one of the most common triggers for CI/CD workflows.
Option F (Creating an Issue) is correct because issues are commonly used as triggers for workflows, such as automatically assigning a label or notifying a team.
Option A (Adding a comment to a discussion post) is correct because actions can be triggered by activity on discussion posts, including comments.
Incorrect Options:
Option B (Creating a new repository) is incorrect because this action typically does not trigger workflows within a specific repository.
Option C (Committing a change to a local git repository) is incorrect because GitHub Actions are triggered by events on the GitHub platform, not by local commits.
Option E (Disabling a GitHub runner) is incorrect because it is related to the environment where actions are executed, not a trigger for workflows.

NEW QUESTION # 21
Which of the following best describes GitHub flow?

- A. A strict workflow that enforces a linear development process with all changes made directly on the main branch
- B. A strategy where separate branches are created for each release, and pull requests are used to collaborate on and approve releases
- C. A lightweight workflow that allows for safe experimentation with new ideas and collaboration on projects through branching, pull requests, and merging
- D. A branching model that uses feature branches and multiple primary branches

Answer: C

Explanation:
GitHub Flow is a simple, yet powerful, branching strategy that is widely used in modern software development. It emphasizes collaboration and flexibility.
GitHub Flow:
Option C is correct because GitHub Flow is a lightweight workflow designed for safe experimentation and collaboration. It involves creating branches for new features or fixes, opening pull requests for review, and merging changes back into the main branch after approval.
Incorrect Options:
Option A is incorrect because GitHub Flow uses a single main branch, not multiple primary branches.
Option B is incorrect because GitHub Flow is not specifically designed around releases; it is more focused on continuous development and integration.
Option D is incorrect because GitHub Flow is not strict or linear; it encourages branching and pull requests rather than direct changes on the main branch.

NEW QUESTION # 22
Which of the following statements most accurately describes who can access a private repository Wiki?

- A. Wikis are public regardless of whether you have access to the repository.
- B. Wikis are only viewable by repository admins.
- C. Wikis can be viewed by the same people who have Read access to the repository.
- D. Wikis will not be visible until shared with a specific user.

Answer: C

Explanation:
For private repositories on GitHub, the Wiki is accessible to anyone who has Read access to the repository. This means that if you can view the code and files in the repository, you can also view its Wiki. This makes Wikis a useful tool for documenting projects in a way that is available to all collaborators without requiring special permissions beyond those needed to access the repository itself.

NEW QUESTION # 23
If there are multiple README files, which of the following locations will be displayed first?

- A. /docs
- B. /src
- C. Root
- D. .github

Answer: C

Explanation:
When multiple README files exist in different locations within a GitHub repository, the README.md file located in the root directory of the repository will be displayed first by default. This file serves as the main documentation for the repository and is automatically rendered on the repository's home page.
Root Directory:
Option C is correct because the README.md file in the root directory is prioritized and displayed first on GitHub. This is the standard behavior for how GitHub presents documentation.
Incorrect Options:

Option A (.github) is incorrect because while a README.md file in the .github directory might be used for certain configurations, it is not the first to be displayed.
Option B (/src) is incorrect because the README.md in the src directory is not prioritized over the root.
Option D (/docs) is incorrect because documentation in the /docs folder is typically secondary to the root README.md.

NEW QUESTION # 24
Which of the following describes a branch in Git?

- A. A separate, isolated copy of the project's codebase
- B. A pointer to an identical snapshot of the project at a specific point in time
- C. A physical copy of the entire project stored on disk
- D. A new repository that shares code with the original "upstream" repository

Answer: A

Explanation:
In Git, a branch is a fundamental concept that represents an independent line of development within a project. Here's a more detailed explanation:
Branch in Git:
Option C is correct because a branch in Git is essentially a separate, isolated copy of the project's codebase where you can make changes without affecting the main codebase. Branches allow developers to work on features, fixes, or experiments in parallel to the main project.
Other Options:
Option A is incorrect because while a branch does point to a specific commit (which represents a snapshot of the project), the description lacks the emphasis on the isolated and parallel development aspect that is critical to the understanding of branches.
Option B is incorrect because a branch is not a physical copy stored on disk; it is a logical reference within the repository.
Option D is incorrect because that description better fits the concept of a fork, not a branch. A fork is a new repository that is a copy of another repository, usually used to contribute back to the original ("upstream") repository.
