So you can't miss our COF-C03 learning prep.

Snowflake SnowPro® Core Certification (COF-C03) Sample Questions (Q371-Q376):

NEW QUESTION # 371

Which of the following objects can be directly restored using the UNDROP command? (Choose two.)

- A. Internal stage
- B. Role
- C. Table
- D. User
- E. View
- F. Schema

Answer: C,E

Explanation:

The UNDROP command in Snowflake can be used to directly restore Views and Tables. These objects, when dropped, are moved to a 'Recycle Bin' where they can be restored within a time limit before they are permanently deleted. References:[COF-C02] SnowPro Core Certification Exam Study Guide

NEW QUESTION # 372

Which data types can be used in Snowflake to store semi-structured data? (Select TWO)

- A. BLOB
- B. JSON
- C. CLOB
- D. VARIANT
- E. ARRAY

Answer: D,E

Explanation:

Snowflake supports the storage of semi-structured data using the ARRAY and VARIANT data types. The ARRAY data type can directly contain VARIANT, and thus indirectly contain any other data type, including itself. The VARIANT data type can store a value of any other type, including OBJECT and ARRAY, and is often used to represent semi-structured data formats like JSON, Avro, ORC, Parquet, or XML34.

NEW QUESTION # 373

What does the worksheet and database explorer feature in Snowsight allow users to do?

- A. Add or remove users from a worksheet.
- B. Tag frequently accessed worksheets for ease of access.
- C. Combine multiple worksheets into a single worksheet.
- D. Move a worksheet to a folder or a dashboard.

Answer: B

Explanation:

The worksheet and database explorer feature in Snowsight allows users to tag frequently accessed worksheets for ease of access. This functionality helps users organize and quickly navigate to the worksheets they use most often, enhancing productivity and streamlining the data exploration and analysis process within Snowsight, Snowflake's web-based query and visualization interface.

NEW QUESTION # 374

When a Snowflake user loads CSV data from a stage, which copy into <table> command guideline should they follow?

- A. The data file in the stage must be in a compressed format.
- B. The data file must have the same number of columns as the target table.
- C. The number of columns in each row should be consistent.
- D. The CSV field delimiter must be a comma character (*,),

Answer: C

Explanation:

When using the COPY INTO <table> command to load CSV data from a stage into a Snowflake table, one of the crucial guidelines to follow is that the number of columns in each row within the CSV file should be consistent. This ensures data integrity and allows for a smooth data loading process, as Snowflake expects each row in the CSV file to map directly to a row in the target table based on the number of columns. If there's a mismatch in the number of columns between any row in the file and the target table, Snowflake might return an error or produce unexpected results during the load operation.

It's important to note that while the CSV field delimiter can be specified to something other than a comma, ensuring the consistency in the number of columns across all rows is fundamental to successfully loading data.

NEW QUESTION # 375

Which transformation is supported by a COPY INTO <table> command?

- A. Cast using a SELECT statement
- B. Filter using a limit keyword
- C. Filter using a where clause
- D. Order using an ORDER BY clause

Answer: A

Explanation:

The COPY INTO <table> command in Snowflake supports transformations such as casting using a SELECT statement. This allows for the transformation of data types as the data is being loaded into the table, which can be particularly useful when the data types in the source files do not match the data types in the target table

NEW QUESTION # 376
