Fortinet FCP - FortiGate 7.6 Administrator Sample Questions (Q79-Q84):

NEW QUESTION # 79
Refer to the exhibit.

```
config system global
    set av-failopen one-shot
end
config ips global
    set fail-open enable
end
```

Based on this partial configuration, what are the two possible outcomes when FortiGate enters conserve mode? (Choose two.)

- A. Administrators must restart FortiGate to allow new session.
- B. Administrators cannot change the configuration.
- C. FortiGate drops new sessions requiring inspection.
- D. FortiGate skips quarantine actions.

Answer: C,D

Explanation:
In fail-open mode, FortiGate skips quarantine actions to maintain traffic flow despite IPS or antivirus failures.
FortiGate drops new sessions that require inspection when in conserve mode and fail-open is enabled, to protect the network from potentially harmful traffic.

NEW QUESTION # 80
You are analyzing connectivity problems caused by intermediate devices blocking traffic in SSL VPN environment.
In which two ways can you effectively resolve the problem? (Choose two.)

- A. You can use SSL VPN tunnel mode to prevent problems with blocked ESP and UDP ports (500 or 4500).
- B. You can configure a hub-and-spoke topology with SSL VPN tunnels to bypass blocked UDP ports.
- C. You can turn off IKE fragmentation to fix large certificate negotiation problems.
- D. You should use IPsec to solve issues with fragment drops and large certificate exchanges.

Answer: A,C

Explanation:
Disabling IKE fragmentation helps resolve issues caused by intermediate devices blocking large fragmented packets during certificate negotiation.
Using SSL VPN tunnel mode encapsulates traffic over HTTPS, bypassing blocks on ESP and UDP ports commonly used by IPsec.

NEW QUESTION # 81
The HTTP inspection process in web filtering follows a specific order when multiple features are enabled in the web filter profile.
Which order must FortiGate use when the web filter profile has features such as safe search enabled?

- A. Static URL filter, FortiGuard category filter, and advanced filters
- B. FortiGuard category filter and rating filter
- C. DNS-based web filter and proxy-based web filter
- D. Static domain filter, SSL inspection filter, and external connectors filters

Answer: A

Explanation:
When multiple web filtering features are enabled, FortiGate processes HTTP inspection in the following order:
1. Static URL filter - checks requests against manually configured URLs or patterns.
2. FortiGuard category filter - classifies the website based on FortiGuard's web reputation and category database.
3. Advanced filters - applies additional options such as safe search enforcement, YouTube restriction, and keyword filtering.

NEW QUESTION # 82
A network administrator is reviewing firewall policies in both Interface Pair View and By Sequence View.
The policies appear in a different order in each view.
Why is the policy order different in these two views?

- A. Interface Pair View sorts policies based on matching interfaces, while By Sequence View shows the actual processing order of rules.
- B. By Sequence View groups policies based on rule priority, while Interface Pair View always follows the order of traffic logs.
- C. The firewall dynamically reorders policies in Interface Pair View based on recent traffic patterns, but By Sequence View remains static.
- D. Policies in Interface Pair View are prioritized by security levels, while By Sequence View strictly follows the administrator's manual ordering.

Answer: A

Explanation:
Interface Pair View organizes policies grouped by source and destination interfaces, whereas By Sequence View displays policies in the exact order they are processed by the firewall.

NEW QUESTION # 83
