## Timely Updated CheckPoint 156-836 Dumps

We did not gain our high appraisal by our 156-836 real exam for nothing and there is no question that our 156-836 practice materials will be your perfect choice. Though it is unavoidable that you may baffle by some question points during review process, our 156-836 Study Guide owns clear analysis under some necessary questions. So as long as you practice our 156-836 training quiz, you will perfect yourself to pass your exam successfully.

## CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q70-Q75):

### NEW QUESTION # 70

What is the Correction Layer mechanism?

- A. Ensures asymmetric traffic is handled properly, especially in the case of NAT or VPNs.
- B. The MHO's distribution algorithm which determines the handling SGM for a given connection.
- C. The load-balancing mechanism used by the MHO.
- D. Enforces the access policy on the SGMs and synchronizes the enforcement verdict to other SGMs in the SG.

**Answer: A**

Explanation:

Explanation

The Correction Layer mechanism is a Maestro component that ensures that packets from the same connection are handled by the same Security Group Module (SGM) in a multi-appliance system. This is especially important when NAT or VPNs are involved, as packets sent from the client to the server can be distributed to a different SGM than packets from the same session sent from the server to the client. The Correction Layer must then forward the packet to the correct SGM.

#### NEW QUESTION # 73

There are two appliances within the same Security Group. One of them is connected by One downlink only, another one by Two downlinks. Assuming there's no NAT and no VPN, what would be proportion of traffic distribution done by Orchestrator?

- A. 33%/66%
- B. 66%/33%
- C. 100%/0%
- D. 50%/50%

**Answer: A**

#### NEW QUESTION # 74

When security policy is installed

- A. All SGMs receive the security policy and simultaneous policy installation occurs.

- B. The policy is installed on the SMO, the SMO Master broadcasts the available package, other members retrieve the new policy from the SMO Master and perform an independent policy verification, then the non-SMO Master SGMs install the policy.
- C. The SMO Master receives the policy and performs a policy verification the policy is installed on the SMO Master, the SMO Master broadcasts the available package, other members retrieve the new policy from the SMO Master, then the non-SMO Master SGMs install the policy.
- D. All SGMs receive the security policy and one by one performs an independent policy verification. Then, all SGMs simultaneously install the policy.

**Answer: C**

Explanation:

This is the correct answer because it describes the security policy installation flow for a Maestro Security Group. The SMO Master is the Security Group Member that acts as the leader and the single point of contact for the Management Server. The SMO Master verifies the policy and installs it first, then notifies the other SGMs that a new policy is available. The other SGMs fetch the policy from the SMO Master and install it in parallel.
