Answer: B

NEW QUESTION # 77

A technician reported that the travel time calculated between appointments is often too short because job delays throughout the day. Which setting should a consultant consider to improve travel time accuracy?

- A. Estimated travel time, minimize travel
- B. Travel speed unit, actual travel time
- **C. Street level routing, Default travel speed**
- D. Minimum grade, default operating hour

Answer: C

Explanation:

Street Level Routing is a feature that calculates travel time between service appointments based on actual road distance and traffic conditions[131]. Default Travel Speed is a setting that defines the average speed of resources when traveling between service appointments[132]. Using Street Level Routing and Default Travel Speed would allow improving travel time accuracy by taking into account real-time road conditions and resource speed. Minimum Grade, Default Operating Hour would not affect travel time accuracy. Minimum Grade is a setting that defines the minimum skill level required for resources to be matched with service appointments[133]. Default Operating Hour is a record that defines the default working hours for resources [134]. Estimated Travel Time, Minimize Travel would not affect travel time accuracy. Estimated Travel Time is a field on the service appointment object that shows the expected travel time for the assigned resource[135].

Minimize Travel is an optimization criterion that prioritizes reducing travel time when scheduling service appointments[136]. Travel Speed Unit, Actual Travel Time would not affect travel time accuracy. Travel Speed Unit is a setting that defines the unit of measurement for travel speed such as miles per hour or kilometers per hour[137]. Actual Travel Time is a field on the service appointment object that shows the actual travel time recorded by the resource[138]. References:

NEW QUESTION # 78

Universal Containers plans to deploy field service lightning to 100 external contractors. There are 75 contractors who need access to work Orders assets mobile app, and chatter. the remaining 25 contractors are paid a commission on sales of containers and need to schedule resources.

Which license types and quantities should the consultant recommend?

- A. 100 contractors 100 contractors
- B. 25 contractors 100 contractors
- **C. 25 contractors 75 contractors 25 contractors**

Answer: C

Explanation:

Contractors are external users who can access Field Service features such as work orders, service appointments, assets, products consumed, etc... There are two types of contractor licenses available:

Contractor (Full Access) and Contractor (Limited Access). Contractor (Full Access) licenses allow users to access all Field Service features except scheduling optimization. Contractor (Limited Access) licenses allow users to access only work orders assigned to them or their crew members via mobile app or web browser[22].

Universal Containers should deploy 25 Contractor (Full Access) licenses to contractors who need to schedule resources and 75 Contractor (Limited Access) licenses to contractors who need access to work orders, assets, mobile app, and chatter. References:
