2026 EXIN CITM: Accurate Free EXIN EPI Certified Information Technology Manager Braindumps

If you want to pass the EXIN EPI Certified Information Technology Manager exam as shortly as possible, we will provide you the CITM exam dumps to help you to pass it. You only need to practice the EXIN EPI Certified Information Technology Manager exam dumps for about 20 to 70 hours, you can pass it successfully. Our EXIN EPI Certified Information Technology Manager exam braindumps will save your time as well as improve your efficiency. Since the skilled professionals will guide you through you practice CITM the exam dumps.

EXIN EPI Certified Information Technology Manager Sample Questions (Q21-Q26):

NEW QUESTION # 21

During the system (application) development project, the customer wants to know how software will be maintained to assure that future functional requirements are incorporated. What type of system maintenance is the customer looking for?

- A. Corrective maintenance
- B. Adaptive maintenance
- **C. Perfective maintenance**
- D. Preventive maintenance

Answer: C

Explanation:

The customer's focus on incorporating future functional requirements indicates a need for perfective maintenance (B). In application management, perfective maintenance involves enhancing software to add new features or improve functionality to meet evolving business needs, such as adding new modules or capabilities.

* Preventive maintenance (A): Focuses on preventing issues by optimizing performance or addressing potential problems, not adding new features.

* Corrective maintenance (C): Involves fixing bugs or errors, not incorporating new functionality.

* Adaptive maintenance (D): Adapts software to environmental changes (e.g., new operating systems), not specifically for new functional requirements.

Perfective maintenance aligns with the SDLC's maintenance phase, ensuring the software evolves to support future business requirements.

Reference: EPI CITM study guide, under Application Management, likely covers software maintenance types in the SDLC, emphasizing perfective maintenance for enhancements. Refer to sections on application lifecycle or maintenance strategies.

NEW QUESTION # 22

In vendor selection, what is the most important reason for a reference check?

- A. To obtain financial information for vendor negotiation
- B. To identify customers not mentioned on the reference list
- C. To verify products by other customers
- **D. To independently verify and validate a vendor's claim**

Answer: D

Explanation:

The most important reason for a reference check in vendor selection is to independently verify and validate a vendor's claim (A). Reference checks involve contacting the vendor's previous or current clients to confirm claims about performance, reliability, and service quality, ensuring the vendor can meet contractual obligations. This aligns with vendor management best practices to mitigate risks by validating vendor credibility.

* Verify products by other customers (B): Too narrow; reference checks focus on overall performance, not just products.

* Obtain financial information (C): Financial data is obtained through financial due diligence, not reference checks.

* Identify customers not mentioned (D): Not a primary goal; the focus is on validating provided references.

Reference: EPI CITM study guide, under Vendor Selection/Management, likely covers due diligence processes, emphasizing reference checks for validation. Check sections on vendor evaluation or due diligence.

NEW QUESTION # 23

A new system (application) is developed for the marketing department. Stakeholders have demanded an independent white box test to take place. What are the stakeholders' biggest concern?

- **A. The quality of the source code of the system**
- B. The functionality of the system
- C. The capacity of the new system
- D. The performance of the system

Answer: A

Explanation:

A white box test involves testing the internal structure and code of an application, requiring access to its source code. The stakeholders' demand for an independent white box test indicates their primary concern is the quality of the source code (C). This type of testing, conducted by an independent party, ensures the code is well-structured, secure, and free of defects that could lead to vulnerabilities or inefficiencies.

* Capacity (A): Refers to the system's ability to handle load, typically tested via performance or stress testing, not white box testing.

* Performance (B): Focuses on speed and responsiveness, evaluated through performance testing, not white box testing.

* Functionality (D): Is tested via black box testing, which focuses on inputs and outputs without examining the code.

White box testing is a technical process often aligned with SDLC quality assurance practices, ensuring code reliability and maintainability, which is critical for stakeholders concerned about long-term system integrity.

Reference: EPI CITM study guide, under Application Management, likely covers testing methodologies in the SDLC, emphasizing white box testing for code quality. Check sections on application testing or quality assurance.

NEW QUESTION # 24

Vendor management meetings take place several times per year. What is the main objective for these meetings?

- A. Identify possible price increases
- B. Discuss improvement programs
- **C. Verify if the vendor continues to meet the requirements of the contract, supporting the business processes**
- D. Explore improvement programs

Answer: C

Explanation:

The main objective of vendor management meetings is to verify if the vendor continues to meet the requirements of the contract, supporting the business processes (C). These meetings, as part of vendor management frameworks, ensure that the vendor's performance aligns with contractual obligations, service level agreements (SLAs), and business needs. They involve reviewing service delivery, compliance, and any issues affecting business processes.

* Explore improvement programs (A): A secondary goal, as improvements may arise from performance reviews.

* Identify possible price increases (B): Price discussions may occur, but they are not the primary focus.

* Discuss improvement programs (D): Similar to A, this is a potential outcome but not the main objective.

Reference: EPI CITM study guide, under Vendor Selection/Management, likely covers vendor performance monitoring and contract compliance. Check sections on vendor management or SLA monitoring.

NEW QUESTION # 25

One particular incident repeatedly occurs every first day of the working week. As part of problem management, it is decided to gather a group of technical specialists to conduct problem analysis. Which technique is recommended?

- A. Technical observation post
- **B. 5-Whys**
- C. Fault isolation
- D. Kepner-Tregoe

Answer: B

Explanation:

For a recurring incident, problem management in ITIL aims to identify the root cause to prevent future occurrences. The 5-Whys technique (C) is recommended as it involves repeatedly asking "why" to drill down to the root cause of the issue. This simple, effective method is suitable for a group of technical specialists analyzing a recurring problem, such as an incident occurring every Monday, which may stem from a specific process, configuration, or system issue.

* Kepner-Tregoe (A): A structured decision-making and problem-solving method, more complex and less focused on root cause analysis alone.

* Technical observation post (B): Not a standard problem management technique; likely a distractor.

* Fault isolation (D): Focuses on isolating faulty components, more applicable to hardware issues than recurring process-related incidents.

The 5-Whys technique is widely used in ITIL problem management for its simplicity and effectiveness in collaborative root cause analysis.

Reference: EPI CITM study guide, under Service Management, likely references ITIL's problem management techniques, including 5-Whys. Check sections on problem analysis or root cause analysis.

NEW QUESTION # 26

.....

Users are buying something online (such as CITM prepare questions), always want vendors to provide a fast and convenient sourcing channel to better ensure the user's use. Because without a quick purchase process, users of our CITM quiz guide will not be able to quickly start their own review program. So, our company employs many experts to design a fast sourcing channel for our CITM Exam Prep. All users can implement fast purchase and use our learning materials. We have specialized software to optimize the user's purchase channels, if you decide to purchase our CITM prepare questions, you can achieve the product content even if the update service and efficient and convenient user experience.
