## CompTIA A+ Certification Exam: Core 1 Sample Questions (Q524-Q529):

#### NEW QUESTION # 524

A technician is setting up three web servers for a retail company that takes online orders for its products. Which of the following network host services should the technician use to ensure the servers' resources will be utilized efficiently?

- A. UTM appliance
- B. Spam gateway
- **C. Load balancer**
- D. AAA server

**Answer: C**

Explanation:

A load balancer is a network device or service that distributes incoming network traffic across multiple servers, based on various criteria, such as availability, capacity, performance, or location. A load balancer can ensure that the servers' resources will be utilized efficiently, as well as improve reliability, scalability, and security. A load balancer can be hardware-based or software-based, or a combination of both. Reference: <https://www.comptia.org/training/books/a-core-1-220-1101-study-guide> (page 79)

#### NEW QUESTION # 525

Every time a user submits a print job, the user receives an error from the printer requesting A4 paper. No other users in the office are having printing issues. Which of the following is the best way to address the user's issue?

- A. Reinstall the printer driver on the user's computer.
- B. Have the user check the page size on every print job.
- **C. Set the printer defaults in the Control Panel to print to letter-sized paper.**
- D. Print to a different printer in the office.

**Answer: C**

Explanation:

When a user consistently receives an error requesting A4 paper for print jobs, and no other users are experiencing similar issues, it indicates a possible misconfiguration in the user's printer settings. By setting the printer defaults in the Control Panel to use letter-sized paper, which is more common in some regions, this ensures that the user's print jobs are aligned with the available paper size in the office printer. This approach addresses the root cause of the issue by ensuring that the default settings match the paper size used in the office, eliminating the need for the user to adjust settings for each print job.

References: Adjusting printer default settings is a standard procedure for resolving paper size mismatch errors, as documented in printer setup and troubleshooting guides.

#### NEW QUESTION # 526

A technician is replacing a failed drive in a RAID 5 array. Which of the following is the first step the technician should take before hot swapping the drive out of the array?

- A. Document the replacement date.
- **B. Perform a full backup.**
- C. Safely dispose of the failed drive.
- D. Shut down the array.

**Answer: B**

Explanation:

Before replacing a failed drive in a RAID 5 array, the technician should perform a full backup of the data on the array to ensure that no data is lost during the hot swapping process. Hot swapping is the process of replacing a drive without shutting down the system or the array, which allows for faster recovery and minimal downtime.

#### NEW QUESTION # 527

A natural disaster occurred, and the storage system for the development team is unrecoverable. The technician is preparing replacement storage arrays that include a hypervisor with the capacity to support several virtual machines. Two separate bays are available, and both should be utilized.

Requirements for the primary array include the following:

- \* No need to be scalable
- \* Very fast on reads
- \* Fault tolerance of one drive
- \* Ability to function with only one drive
- \* Easily recoverable data
- \* High redundancy
- \* Minimum number of drives

Requirements for the secondary array include the following:

- \* Fault tolerance of one drive
- \* Total space of 600GB
- \* Best write performance
- \* Minimum number of drives

Instructions:

Drag and Drop the appropriate Hard Drives. Then Open each array to complete the configuration.

**Answer:**

Explanation:

Explanation:

Primary Array:

- \* Drag and drop two 120 GB SSD hard drives to the primary array bay.
- \* Open the primary array and select RAID 1 as the RAID level. RAID 1 provides fault tolerance of one drive, ability to function

with only one drive, easily recoverable data, high redundancy, and very fast on reads. It also does not need to be scalable and uses the minimum number of drives (two) for RAID 1.

\* Confirm the configuration and close the primary array.

Secondary Array:

\* Drag and drop two 300 GB SSD hard drives to the secondary array bay.

\* Open the secondary array and select RAID 0 as the RAID level. RAID 0 provides the best write performance and uses the minimum number of drives (two) for RAID 0. It also provides a total space of 600 GB (300 GB x 2), which meets the requirement.

\* Confirm the configuration and close the secondary array.

You have completed the configuration of the storage arrays.

### NEW QUESTION # 528

A customer is reporting that some of the keys at the bottom edge on a laptop are hard to press and the track pad buttons require significant force to click. The technician inspects the laptop and does not notice any cracks or other damage to the chassis or screen. Which of the following is the most likely cause of the issue?

- A. The digitizer has failed.
- B. The customer dropped the laptop.
- C. An open bottle of rubbing alcohol fell onto the keyboard.
- D. The battery is swollen.

**Answer: D**

Explanation:

Explanation

A swollen battery is the most likely cause of the issue that the customer is reporting. A swollen battery is a battery that has expanded in size due to a chemical reaction, gas buildup, or overheating. A swollen battery can cause pressure on the laptop's chassis, keyboard, track pad, and other components, making them hard to press or click. A swollen battery can also pose a fire hazard and damage the laptop's performance and lifespan.

The other options are not as likely or relevant to the issue. Dropping the laptop may cause cracks or other visible damage to the chassis or screen, but the technician did not notice any. The digitizer is the part of the laptop that converts touch input into digital signals, and it has nothing to do with the keyboard or the track pad buttons. An open bottle of rubbing alcohol falling onto the keyboard may cause liquid damage, corrosion, or short circuits, but it would not affect the track pad buttons or the bottom edge of the keyboard.

To troubleshoot and resolve the issue, the technician should remove the battery from the laptop and inspect it for signs of swelling, such as bulging, deformation, or leakage. The technician should also check the laptop's chassis, keyboard, and track pad for any signs of damage or warping caused by the battery. The technician should then replace the swollen battery with a new one that is compatible with the laptop's model and specifications. The technician should also dispose of the swollen battery properly and safely, following the local regulations and guidelines.
