A Sample Syllabus Statement

Here at UCR we are committed to upholding and promoting the values of the Tartan Soul: Integrity, Accountability, Excellence, and Respect. As a student in this class, it is your responsibility to act in accordance with these values by completing all assignments in the manner described, and by informing the instructor of suspected acts of academic misconduct by your peers. By so doing, you will not only affirm your own integrity, but also the integrity of the intellectual work of this University, and the degree which it represents. Should you choose to commit academic misconduct in this class, you will be held accountable according to the policies set forth by the University, and will incur appropriate consequences both in this class and from Student Conduct and Academic Integrity Programs. For more information regarding University policy and its enforcement, please visit: conduct.ucr.edu. My specific expectations for academic integrity in this class are as follows:

Instructors: Please define your specific expectations for academic integrity in your class, such as materials students are/are not allowed to use in exams, sources students may/may not use in completing assignments, and your policy on working together, as these are some of the most common violations we see.

It is expected that you will ask for clarification if you have questions or concerns regarding any of the above expectations.

if you wish to craft your own syllabus statement, it is recommended that it contain the following elements:

- 1. Clearly defined expectations of academic integrity as they relate specifically to the course.*
- 2. Clearly stated consequences, in terms of both the class grade and further disciplinary action by Student Conduct and Academic Integrity Programs, should those expectations not be met.*
- 3. Reference to the Student Conduct and Academic Integrity Programs website (conduct.ucr.edu) for further information regarding policy and its enforcement.*

SaviyntのSCAIP試験トレントを購入した後、10分以内にできるだけ早く製品をお届けすることを保証します。そのため、長時間待つ必要がなく、配達時間や遅延を心配する必要はありません。SCAIP準備トレントをすぐにオンラインでお客様に転送します。このサービスは、Xhs1991のSCAIPテストブレイクダウンが人々の心をつかむ理由でもあります。さらに、SCAIPトレーニングガイドで20~30時間だけ学習すれば、Saviynt Certified Advanced IGA Professional (Level 200)試験に自信を持って合格することができます。

Saviynt SCAIP 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">• Rules Engineering: This section covers creating and managing automated access policies and rules that handle joiner, mover, and leaver scenarios through technical and user update rules.
トピック 2	<ul style="list-style-type: none">• Access Request System: This section focuses on configuring and managing the end-to-end access request process, including workflows, approvals, and provisioning for both connected and disconnected applications.
トピック 3	<ul style="list-style-type: none">• Segregation of Duties: This section addresses identifying, preventing, and remediating SOD conflicts using rulesets, mitigating controls, and both preventative and detective analysis methods.
トピック 4	<ul style="list-style-type: none">• Access Reviews: This section covers the configuration and execution of access review campaigns across different reviewer types, along with campaign tracking and post-certification processes.

- Analytics: This section focuses on building, configuring, and delivering reports, analytic controls, and dashboards to support data-driven identity governance decisions.

世界経済の急速な発展と国際的な競争の激化により、知識ベース経済の主要な地位は徐々に確立されています。多くの人が、良い仕事、SCAIP認定、より高い生活水準を求めています。良い仕事やより高い生活水準などを手に入れたいのであれば、変化する世界に歩調を合わせ、知識を更新することが非常に重要です。まず、適切なSCAIPクイズ準備を取得する必要があります。SCAIP試験に合格して証明書を取得するだけなので、まともな仕事を得て、より多くのお金を稼ぐことができます。

Saviynt Certified Advanced IGA Professional (Level 200) 認定 SCAIP 試験問題 (Q26-Q31):

質問 # 26

Which capabilities are supported for Active Directory groups through Saviynt group management? (Multi- Select)

- A. Delete groups
- B. Only launch certification campaigns
- C. Create groups
- D. Update groups

正解: A、C、D

解説:

The correct answers are A, B, and C . Saviynt documentation for Active Directory group management states that the connector can be used to create, update, and delete AD or ADSI groups. It also supports related group-management functions such as updating group attributes and maintaining group membership and owners. This confirms that Saviynt group management is not limited to visibility or request tracking; it supports the full operational lifecycle for AD groups when configured correctly.

Saviynt's administrative documentation further explains that group management must be configured to enable users to create and manage groups in Saviynt Identity Cloud. That broader wording aligns with the specific lifecycle operations of create, update, and delete. Option D is incorrect because campaign launching is part of certification governance, not the core capability set of AD group management itself. A campaign may later review group-related access, but group management is fundamentally about administering the group object and its membership lifecycle. For Level 200 preparation, this distinction matters: group management handles the lifecycle of the group object, while campaigns handle review and attestation of access associated with identities, roles, or entitlements.

質問 # 27

Which of the following actions will allow the EIC admin to launch the campaign once the user attributes change?

- A. This cannot be automated and the campaign needs to be launched manually
- B. Configure User Update Rule to trigger the campaign
- C. Schedule a campaign to detect user updates
- D. Configure Trigger Campaign upon update under connection attributes

正解: B

解説:

In Saviynt EIC, automation of campaigns based on identity changes is typically achieved using User Update Rules. These rules monitor changes in user attributes (such as department, role, manager, or status) and can trigger predefined actions when conditions are met.

Option A is incorrect because a User Update Rule can be configured to trigger a campaign when specific attribute changes are detected. This allows organizations to automatically initiate certification campaigns when critical identity attributes change, ensuring continuous compliance and governance without manual intervention.

Option B is incorrect because connection attributes are primarily used for provisioning and integration logic, not for triggering campaigns. Option C is partially valid in a general sense, but scheduled campaigns do not dynamically react to attribute changes—they run on predefined schedules regardless of changes. Option D is incorrect because Saviynt supports automation through rules. Thus, User Update Rules provide an event-driven mechanism to launch campaigns based on real-time user attribute changes, making Option A the correct answer.

質問 # 28

An EIC Administrator has a requirement to filter the list of roles based on user location, for example: A user from country A should be able to request only roles for country A. What configuration administrator can use here?

- A. Role Configuration - > User Query
- **B. Global Configuration - > Role Request Query**
- C. SAV Role
- D. Role cannot be filtered based on user attribute

正解: B

解説:

In Saviynt EIC, the correct configuration for controlling which roles appear in the Access Request screen is the Request Roles Query / Role Request Query under Global Configuration. Saviynt's official documentation for Configuring Role Requests states that this setting is used to specify a query to control the display of roles in Access Request, meaning only roles returned by that query are shown to the requester. That is exactly the use case in this question: filtering the visible role list by a user attribute such as country or location. A query can be written so that users from Country A see only the roles mapped for Country A.

The other options are not correct in this context. SAV Role controls administrative UI permissions in Saviynt, not end-user role catalog filtering. Role Configuration - > User Query is not the standard setting used to drive request-time role visibility for this scenario. Option D is incorrect because Saviynt explicitly supports this use case through the Request Roles Query capability.

質問 # 29

What are the different authentication modes supported for SMTP configurations? (Multi Select)

- **A. OAuth**
- B. None of the above
- **C. NTLM**
- **D. Basic**

正解: A、C、D

解説:

In Saviynt EIC, SMTP configuration is used to enable email notifications for workflows such as access requests, certifications, alerts, and system communications. To securely connect with mail servers, Saviynt supports multiple authentication mechanisms. The valid authentication modes are NTLM, OAuth, and Basic, making Options A, B, and D correct.

Basic Authentication (Option D) is the traditional method where a username and password are used to authenticate with the SMTP server. While widely supported, it is less secure compared to modern methods and is being phased out in many environments.

NTLM (Option A) is commonly used in Microsoft-based environments (e.g., Exchange servers) and provides integrated authentication using Windows credentials, offering better security than basic authentication.

OAuth (Option B) is a modern and more secure authentication mechanism that uses token-based authorization instead of storing credentials. It is commonly used with cloud-based email services such as Microsoft 365 or Google Workspace.

Option C is incorrect because Saviynt explicitly supports multiple authentication modes.

Thus, NTLM, OAuth, and Basic are the supported SMTP authentication modes in Saviynt.

質問 # 30

Which among these is NOT a valid parameter under ImportAccountEntJSON in REST connector?

- A. entitlementParams
- **B. entOwnerParams**
- C. accountOwnerParams
- D. accountParams

正解: B

解説:

In Saviynt EIC REST connector configuration, ImportAccountEntJSON is used to define how account and entitlement data are imported (reconciled) from a target system. This JSON structure includes several predefined and supported parameters that control how accounts, entitlements, and their ownership relationships are processed.

accountParams (Option C) is a valid parameter and is used to map account-level attributes such as account name, status, and identifiers. entitlementParams (Option B) is also valid and defines how entitlement data (groups, roles, permissions) are fetched and mapped. accountOwnerParams (Option A) is another valid parameter used to define account ownership mapping, helping assign owners to accounts during reconciliation.

However, entOwnerParams (Option D) is NOT a valid parameter in the ImportAccountEntJSON structure. The correct naming convention for entitlement ownership (if applicable) does not use "entOwnerParams" in Saviynt REST connector configuration. Saviynt follows strict parameter naming standards, and incorrect parameter names will not be recognized or processed by the connector.

Thus, Option D is the correct answer, as it represents an invalid configuration parameter in the context of ImportAccountEntJSON.

質問 #31

.....

数千人のSaviynt専門家で構成された権威ある制作チームが、SCAIP学習の質問を理解し、質の高い学習体験を楽しんでいます。試験概要と現在のポリシーの最近の変更に応じて、SCAIPテストガイドの内容を随時更新します。また、SCAIP試験の質問は、わかりにくい概念を簡素化して学習方法を最適化し、習熟度を高めるのに役立ちます。もう一つ、SCAIPテストガイドを使用すると、試験を受ける前に20~30時間の練習でSaviynt Certified Advanced IGA Professional (Level 200)準備時間を短縮できることは間違いありません。
