Latest Salesforce Plat-Arch-201 Questions in Three Different Formats

We have always been known as the superior after sale service provider, since we all tend to take lead of the whole process after you choose our Plat-Arch-201 exam questions. So you have no need to trouble about our Plat-Arch-201 study materials, if you have any questions, we will instantly response to you. Our Plat-Arch-201 Training Materials will continue to pursue our passion for better performance and comprehensive service of Plat-Arch-201 exam.

Salesforce Certified Platform Data Architect Sample Questions (Q246-Q251):

NEW QUESTION # 246

Ursa Major Solar's legacy system has a quarterly accounts receivable report that compiles data from the following:

- Accounts
- Contacts
- Opportunities
- Orders
- Order Line Items

Which issue will an architect have when implemented this in Salesforce?

- A. Custom report types CANNOT contain Opportunity data.
- B. Salesforce does NOT support Orders or Order Line Items.
- C. Salesforce does NOT allow more than four objects in a single report type.

- D. A report CANNOT contain data from Accounts and Contacts.

Answer: C

Explanation:

The issue that an architect will have when implementing the quarterly accounts receivable report in Salesforce is that Salesforce does not allow more than four objects in a single report type. A report type defines the set of records and fields available to a report based on the relationships between a primary object and up to four related objects. A report type has the following limitations:

It cannot include more than four objects in a single report type, which means that the report cannot compile data from five objects (Accounts, Contacts, Opportunities, Orders, and Order Line Items) at once.

It cannot include objects that are more than two relationships away from each other, which means that the report cannot access fields from Order Line Items through Opportunities and Orders.

It cannot include objects that have a many-to-many relationship with each other, which means that the report cannot access fields from Contacts and Opportunities through the junction object Opportunity Contact Role.

NEW QUESTION # 247

UC is using SF CRM. UC sales managers are complaining about data quality and would like to monitor and measure data quality. Which 2 solutions should a data architect recommend to monitor and measure data quality? Choose 2 answer

- A. Install and run data quality analysis dashboard app
- B. Review data quality reports and dashboards.
- C. Export data and check for data completeness outside of Salesforce.
- D. Use custom objects and fields to identify issues.

Answer: A,B

Explanation:

Reviewing data quality reports and dashboards and installing and running data quality analysis dashboard app are two solutions that can help monitor and measure data quality. Data quality reports and dashboards can provide insights into the completeness, accuracy, and consistency of the data. Data quality analysis dashboard app is a free app from AppExchange that can help analyze and improve data quality by identifying duplicate, incomplete, or inaccurate records.

NEW QUESTION # 248

Universal Containers (UC) is facing data quality issues where Sales Reps are creating duplicate customer accounts, contacts, and leads. UC wants to fix this issue immediately by prompting users about a record that possibly exists in Salesforce. UC wants a report regarding duplicate records. What would be the recommended approach to help UC start immediately?

- A. Create a duplicate rule for account, lead, and contact, use standard matching rules for these objects, and set the action to block for both creates and edits.
- B. Create an after insert and update trigger on the account, contact and lead, and send an error if a duplicate is found using a custom matching criteria.
- C. Create a before insert and update trigger on account, contact, and lead, and send an error if a duplicate is found using a custom matching criteria.
- D. Create a duplicate rule for account, lead, and contact, use standard matching rules for these objects, and set the action to report and alert for both creates and edits.

Answer: D

Explanation:

Creating a duplicate rule for account, lead, and contact, using standard matching rules for these objects, and setting the action to report and alert for both creates and edits can help UC fix the issue immediately by prompting users about a record that possibly exists in Salesforce. This can also generate a report regarding duplicate records that can be used for further analysis and resolution

NEW QUESTION # 249

UC is building a salesforce application to track contacts and their respective conferences that they have attended with the following requirements:

1. Contacts will be stored in the standard contact object.
2. Conferences will be stored in a custom conference_c object.

3. Each contact may attend multiple conferences and each conference may be related to multiple contacts. How should a data architect model the relationship between the contact and conference objects?

- A. Create a lookup relationship field on contact object.
- **B. Implement a Contact Conference junction object with master detail relationship to both contact and conference_c**
- C. Create a master detail relationship field on the Contact object.
- D. Create a master detail relationship field on the Conference object.

Answer: B

Explanation:

Implementing a Contact Conference junction object with master detail relationship to both contact and conference_c is the correct way to model the relationship between the contact and conference objects, as it allows a many-to-many relationship between them. This means that each contact can attend multiple conferences, and each conference can be related to multiple contacts. Creating a master detail relationship field on either the contact or the conference object would create a one-to-many relationship, which does not meet the requirements. Creating a lookup relationship field on contact object would also create a one-to-many relationship, and would not enforce referential integrity.

NEW QUESTION # 250

Which integration pattern is synchronous?

- A. Event-driven
- B. Fire-and-forget
- C. Batch processing
- **D. Request-reply**

Answer: D

Explanation:

The client waits for a response.

NEW QUESTION # 251

.....

Created on the exact pattern of the actual Plat-Arch-201 tests, Exam4Labs's dumps comprise questions and answers and provide all important Plat-Arch-201 information in easy to grasp and simplified content. The easy language does not pose any barrier for any learner. The complex portions of the Plat-Arch-201 certification syllabus have been explained with the help of simulations and real-life based instances. The best part of Plat-Arch-201 Exam Dumps are their relevance, comprehensiveness and precision. You need not to try any other source for Plat-Arch-201 exam preparation. The innovatively crafted dumps will serve you the best; imparting you information in fewer number of questions and answers.
