SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q30-Q35):

NEW QUESTION # 30
What are the correct applications of a Parallel Gateway in a business process model? (Choose two)

- A. To initiate multiple tasks at once
- B. To synchronize the flow before proceeding
- C. To merge concurrent flows
- D. To distribute incoming tokens to all outgoing sequences

Answer: A,D

NEW QUESTION # 31
How can a process analysis be structured in SAP Signavio Process Intelligence?Note: There are 2 correct answ-ers to this que-stion.

- A. Create Investigations for specific purposes.
- B. Create Sub-chapters within existing Chapters.
- C. Create specific Data views.
- D. Create Chapters to breakdown specific topics.

Answer: A,D

NEW QUESTION # 32
What is a Query?

- A. A request for information from a database
- B. A request to start a workflow
- C. A request created by the system
- D. A request to show a data model

Answer: A

Explanation:
A query in the context of SAP Signavio Process Intelligence is a fundamental concept for data retrieval. The documentation provides a clear definition:
* Exact Extract:"A query is a request for information from a database, typically written in SQL, to retrieve specific data or perform calculations based on defined criteria. In SAP Signavio Process Intelligence, queries are used to extract process data for analysis, such as case attributes or event sequences." (SAP Signavio Process Intelligence User Guide, section on "SQL Query Editor and Data Retrieval").
* Explanation:
* Option B (A request for information from a database):This is correct as a query is a structured request, often in SQL, to retrieve or manipulate data from the database underlying Process Intelligence, such as fetching cases with specific attributes.
* Option A (A request to start a workflow)is incorrect because workflows are managed in SAP Signavio Process Governance, and queries do not initiate them.
* Option C (A request to show a data model)is incorrect as displaying a data model is a configuration task, not the purpose of a query.
* Option D (A request created by the system)is incorrect because queries are user-defined or configured, not automatically generated by the system.
Reference:SAP Signavio Process Intelligence User Guide, section on "SQL Query Editor and Data Retrieval"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 4: Query Fundamentals.

NEW QUESTION # 33
What is a Variant in Process Mining?

- A. A variant visualizes all tasks to complete the process.

- B. A variant is a set of attributes.
- C. A variant has different process flows.
- D. A variant is a set of cases with the same sequence of tasks.

Answer: D

Explanation:
In Process Mining, a Variant is defined as:
* Option A (A variant is a set of cases with the same sequence of tasks.):This definition accurately captures the essence of what a variant represents in the context of process mining. Variants help in understanding how processes are executed by grouping cases that follow the same sequence of activities or tasks, thus allowing for the analysis of common process flows and identifying deviations or inefficiencies.
