

Free 1z0-076 Test Questions & Latest 1z0-076 Exam Format

2026 Latest ActualPDF 1z0-076 PDF Dumps and 1z0-076 Exam Engine Free Share: https://drive.google.com/open?id=1750bBUyUah0jqivQYeTne2mFV_-tghBQ

With the increasing marketization, the 1z0-076 study guide experience marketing has been praised by the consumer market. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the 1z0-076 study training materials, so we provide free pre-sale experience to help users to better understand our 1z0-076 Exam Questions. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of 1z0-076 latest questions to download.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 3	<ul style="list-style-type: none">Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 4	<ul style="list-style-type: none">Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 6	<ul style="list-style-type: none">Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.

Topic 7	<ul style="list-style-type: none"> • Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 8	<ul style="list-style-type: none"> • Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 9	<ul style="list-style-type: none"> • Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Topic 10	<ul style="list-style-type: none"> • Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 11	<ul style="list-style-type: none"> • Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 12	<ul style="list-style-type: none"> • Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 13	<ul style="list-style-type: none"> • Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 14	<ul style="list-style-type: none"> • Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.

The Best Free 1z0-076 Test Questions & Reliable Latest 1z0-076 Exam Format & Complete 1z0-076 Valid Test Testking

It was never so easy to make your way to the world's most rewarding professional qualification as it has become now! ActualPDF' 1z0-076 practice test questions answers are the best option to secure your success in just one go. You can easily answer all exam questions by doing our 1z0-076 exam dumps repeatedly. For further sharpening your skills, practice mock tests using our 1z0-076 Brain Dumps Testing Engine software and overcome your fear of failing exam. Our Oracle Database 19c: Data Guard Administration dumps are the most trustworthy, reliable and the best helpful study content that will prove the best alternative to your time and money.

Oracle Database 19c: Data Guard Administration Sample Questions (Q105-Q110):

NEW QUESTION # 105

Which two factors can cause an increase in redo transport lag?

- A. The size of the online redo log files on the primary database.
- B. The size of the online redo log files on the standby database.
- C. Increase in redo generation rate on the primary database.
- D. The size of the standby redo log files on the primary database.
- E. Increase in network latency between the primary database and a redo transport destination.

Answer: C,E

NEW QUESTION # 106

Active Data Guard (ADG) databases are widely used to offload reporting or ad hoc query-only jobs from the primary database.

Reporting workload profile is different from the primary database and often requires tuning.
Which tool is used to tune SQL workloads running on an ADG database?

- A. Standby Statspack
- B. Automatic Diagnostic Database Monitor (ADDM)
- C. In-Memory Active Session History (ASH)
- D. SQL Tuning Advisor
- E. Automatic Workload Repository (AWR)

Answer: E

Explanation:

AWR collects, processes, and maintains performance statistics for problem detection and self-tuning purposes.

In an Active Data Guard environment, where the physical standby database can be used for read-only workloads, AWR can be instrumental in identifying performance bottlenecks and areas for optimization. It provides detailed reports that include wait events, time model statistics, and active session history, making it an invaluable tool for tuning SQL queries and overall database performance in an ADG setup.

NEW QUESTION # 107

Examine the Data Guard configuration:

```
DGMGRL> show configuration;
```

Configuration - Animals

Protection Mode: Max Availability

Databases:

dogs - Primary database sheep

- Physical standby database cats

- Physical standby database

Fast-Start Failover: DISABLED

Configuration Status: SUCCESS

An attempt to enable fast-start failover raises an error:

```
DGMGRL> enable fast_start failover;
```

Error: ORA-16693: requirements not met for enabling fast-start failover Failed.

Identify three possible reasons for this error.

- A. The LogXptMode property is set to FASTSYNC on Cats while Sheep is the target standby database.
- B. The LogxptModr property is set to async on Sheep while Sheep is the target standby database.
- C. The fastStartFailoverTarget property is not set on Dogs.
- D. The LogXptMode property is set to fastsync on Dogs.
- E. The LogXptMode property is set to async on Dogs.

Answer: B,C,E

Explanation:

When enabling fast-start failover, certain conditions must be met:

The fastStartFailoverTarget property is not set on Dogs (A): The primary database (Dogs) needs to have a fast-start failover target configured for the operation to succeed.

The LogXptMode property is set to ASYNC on Sheep while Sheep is the target standby database (B): Fast-start failover requires synchronous redo transport (SYNC or FASTSYNC) to ensure zero data loss, which is a prerequisite for enabling the feature.

The LogXptMode property is set to ASYNC on Dogs (D): Similar to the previous point, the primary database must be configured to use synchronous redo transport for the fast-start failover to be possible.

Oracle Database Error Messages Guide

NEW QUESTION # 108

A customer asks you to propose the most appropriate solution for this set of requirements:

We need a disaster recovery solution that enables us to fail over from our production database with zero data loss.

We want to generate reports from the proposed standby database at the same time that it is used for data protection.

Developers may need to test occasionally on a copy of the live database Which TWO solutions would you recommend?

- Answer: A,E**

Which TWO statements are true for Data Guard environments with multi-tenant databases?

- Answer: D,E**
