

Professional-Cloud-Security-Engineer Exam Braindumps & Brain Professional-Cloud-Security-Engineer Exam

2026 Latest Prep4King Professional-Cloud-Security-Engineer PDF Dumps and Professional-Cloud-Security-Engineer Exam Engine Free Share: <https://drive.google.com/open?id=1VtDQLOvw1VvQPtUL52SfzGEccuVbVUC9>

If you have tried on our Professional-Cloud-Security-Engineer exam questions, you may find that our Professional-Cloud-Security-Engineer study materials occupy little running memory. So it will never appear flash back. If you want to try our Professional-Cloud-Security-Engineer learning prep, just come to free download the demos which contain the different three versions of the Professional-Cloud-Security-Engineer training guide. And you will find every version is charming. Follow your heart and choose what you like best on our website.

The Google Professional-Cloud-Security-Engineer exam is one of several certifications offered by Google Cloud, each of which tests a different aspect of cloud computing expertise. The Professional-Cloud-Security-Engineer certification is targeted at those who wish to specialize in security. It is a highly respected and sought-after certification, giving individuals a competitive edge in the job market and demonstrating their commitment to security excellence.

The Google Professional-Cloud-Security-Engineer Exam consists of 50 multiple-choice and multiple-select questions, which must be completed in two hours. The questions are designed to test the candidate's knowledge and understanding of various aspects of cloud security, such as identity and access management, network security, data protection, and compliance. Professional-Cloud-Security-Engineer exam is available in multiple languages, including English, Japanese, and Korean.

Right Google Professional-Cloud-Security-Engineer Questions: Epic Ways to

Pass Exam [2026]

Now is not the time to be afraid to take any more difficult certification exams. Our Professional-Cloud-Security-Engineer learning quiz can relieve you of the issue within limited time. Our website provides excellent learning guidance, practical questions and answers, and questions for your choice which are your real strength. You can take the Professional-Cloud-Security-Engineer Training Materials and pass it without any difficulty. As long as you can practice Professional-Cloud-Security-Engineer study guide regularly and persistently your goals of making progress and getting certificates smoothly will be realized just like a piece of cake.

Google Professional-Cloud-Security-Engineer (Google Cloud Certified - Professional Cloud Security Engineer) Certification Exam is a valuable credential for IT professionals who are interested in cloud security. Professional-Cloud-Security-Engineer exam covers a wide range of topics related to cloud security and is designed to ensure that certified professionals possess a deep understanding of the unique security challenges and opportunities that come with cloud computing. With the right preparation, candidates can pass the exam and demonstrate their expertise to potential employers.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q264-Q269):

NEW QUESTION # 264

Your company is storing sensitive data in Cloud Storage. You want a key generated on-premises to be used in the encryption process.

What should you do?

- A. Use the Cloud Key Management Service to manage a data encryption key (DEK).
- **B. Use customer-supplied encryption keys to manage the data encryption key (DEK).**
- C. Use customer-supplied encryption keys to manage the key encryption key (KEK).
- D. Use the Cloud Key Management Service to manage a key encryption key (KEK).

Answer: B

NEW QUESTION # 265

You are on your company's development team. You noticed that your web application hosted in staging on GKE dynamically includes user data in web pages without first properly validating the inputted data. This could allow an attacker to execute gibberish commands and display arbitrary content in a victim user's browser in a production environment.

How should you prevent and fix this vulnerability?

- A. Set up an HTTPS load balancer, and then use Cloud Armor for the production environment to prevent the potential XSS attack.
- B. Use Web Security Scanner to validate the usage of an outdated library in the code, and then use a secured version of the included library.
- **C. Use Web Security Scanner in staging to simulate an XSS injection attack, and then use a templating system that supports contextual auto-escaping.**
- D. Use Cloud IAP based on IP address or end-user device attributes to prevent and fix the vulnerability.

Answer: C

Explanation:

Explanation

There is mention about simulating in Web Security Scanner. "Web Security Scanner cross-site scripting (XSS) injection testing *simulates* an injection attack by inserting a benign test string into user-editable fields and then performing various user actions." <https://cloud.google.com/security-command-center/docs/how-to-remediate-web-security-scanner-findin>

NEW QUESTION # 266

You are a member of your company's security team. You have been asked to reduce your Linux bastion host external attack surface by removing all public IP addresses. Site Reliability Engineers (SREs) require access to the bastion host from public locations so they can access the internal VPC while off-site. How should you enable this access?

- **A. Implement Identity-Aware Proxy TCP forwarding for the bastion host.**
- B. Implement OS Login with 2-step verification for the bastion host.

- C. Implement Google Cloud Armor in front of the bastion host.
- D. Implement Cloud VPN for the region where the bastion host lives.

Answer: A

NEW QUESTION # 267

You are responsible for protecting highly sensitive data in BigQuery. Your operations teams need access to this data, but given privacy regulations, you want to ensure that they cannot read the sensitive fields such as email addresses and first names. These specific sensitive fields should only be available on a need-to-know basis to the HR team. What should you do?

- A. Perform data redaction with the DLP API and store that data in BigQuery for later use.
- **B. Perform tokenization for Pseudonymization with the DLP API and store that data in BigQuery for later use.**
- C. Perform data inspection with the DLP API and store that data in BigQuery for later use.
- D. Perform data masking with the DLP API and store that data in BigQuery for later use.

Answer: B

Explanation:

Explanation

Pseudonymization is a de-identification technique that replaces sensitive data values with cryptographically generated tokens.

Pseudonymization is widely used in industries like finance and healthcare to help reduce the risk of data in use, narrow compliance scope, and minimize the exposure of sensitive data to systems while preserving data utility and accuracy.

<https://cloud.google.com/dlp/docs/pseudonymization>

NEW QUESTION # 268

A retail customer allows users to upload comments and product reviews. The customer needs to make sure the text does not include sensitive data before the comments or reviews are published.

Which Google Cloud Service should be used to achieve this?

- **A. Cloud Data Loss Prevention API**
- B. Cloud Key Management Service
- C. BigQuery
- D. Cloud Security Scanner

Answer: A

Explanation:

To ensure user-uploaded comments and product reviews do not include sensitive data before publication, use the Cloud Data Loss Prevention (DLP) API.

* Enable DLP API:

* Go to the Cloud Console and navigate to APIs & Services > Library.

* Search for "Data Loss Prevention API" and enable it.

* Configure DLP API:

* Create an inspection template specifying the types of sensitive data to detect.

* Set up de-identification templates if you want to redact or mask sensitive data.

* Implement DLP in Application:

* Use the Google Cloud DLP Client Library for the desired programming language.

* Send the text data to the DLP API for inspection before saving or publishing.

```
from google.cloud import dlp_v2
dlp_client = dlp_v2.DlpServiceClient()
parent = f'projects/{project_id}'
item = {"value": "User comment text here"}
inspect_config = {"info_types": [{"name": "PERSON_NAME"}, {"name": "CREDIT_CARD_NUMBER"}]}
response = dlp_client.inspect_content(parent=parent, inspect_config=inspect_config, item=item)
