

# The Open Group OGEA-103 Exam Course | Reliable OGEA-103 Test Book

## The Open Group OGEA-103

TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam

**Questions & Answers PDF**

**(Demo Version – Limited Content)**

For More Information – Visit link below:

<https://p2pexam.com/>

Visit us at: <https://p2pexam.com/ogea-103>

P.S. Free & New OGEA-103 dumps are available on Google Drive shared by Dumpexams: <https://drive.google.com/open?id=1YIBtHaAbJ6YNbH11nEgMs-Euk9s-FKun>

One of features of us is that we are pass guaranteed and money back guaranteed if you fail to pass the exam after buying OGEA-103 training materials of us. Or if you have other exam to attend, we can replace other 2 valid exam dumps to you, at the same time, you can get the update version for OGEA-103 Training Materials. Besides, we offer you free update for 365 days after purchasing, and the update version will be sent to your email address automatically. The OGEA-103 exam dumps include both the questions and answers, and it will help you to practice.

In a busy world, managing your time is increasingly important. If you don't want to waste much time on preparing for your exam, OGEA-103 exam braindumps files will be a shortcut for you. Good exam materials make you twice the result with half the effort. Our OGEA-103 Exam Braindumps cover many questions and answers of the real test so that you can be familiar with the real test question. When you attend OGEA-103 exam, it is easy for you to keep good mood and control your finishing time.

>> The Open Group OGEA-103 Exam Course <<

## 2026 Realistic The Open Group OGEA-103 Exam Course Pass Guaranteed Quiz

If you are occupied with your study or work and have little time to prepare for your exam, then you can choose us. OGEA-103 training materials are edited by skilled professional experts, and therefore they are high-quality. You just need to spend about 48 to 72 hours on study, you can pass the exam. We are pass guarantee and money back guarantee for OGEA-103 Exam Materials, if

you fail to pass the exam, you just need to send us your failure scanned to us, we will give you full refund, and no other questions will be asked. Online and offline service is available, if you have any questions for OGEA-103 exam materials, don't hesitate to consult us.

## The Open Group TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Sample Questions (Q55-Q60):

### NEW QUESTION # 55

Please read this scenario prior to answering the question

Your role is that of a senior architect, reporting to the Chief Enterprise Architect, at a medium-sized company with 400 employees. The nature of the business is such that the data and the information stored on the company systems is their major asset and is highly confidential.

The company employees travel extensively for work and must communicate over public infrastructure using message encryption, VPNs, and other standard safeguards. The company has invested in cybersecurity awareness training for all its staff. However, it is recognized that even with good education as well as system security, there is a dependency on third-party suppliers of infrastructure and software.

The company uses the TOGAF standard as the method and guiding framework for its Enterprise Architecture (EA) practice. The CTO is the sponsor of the activity.

The Chief Security Officer (CSO) has noted an increase in ransomware (malicious software used in ransom demands) attacks on companies with a similar profile. The CSO recognizes that no matter how much is spent on education, and support, it is likely just a matter of time before the company suffers a significant attack that could completely lock them out of their information assets.

A risk assessment has been done and the company has sought cyber insurance that includes ransomware coverage. The quotation for this insurance is hugely expensive. The CTO has recently read a survey that stated that one in four organizations paying ransoms were still unable to recover their data, while nearly as many were able to recover the data without paying a ransom. The CTO has concluded that taking out cyber insurance in case they need to pay a ransom is not an option.

Refer to the scenario

You have been asked to describe the steps you would take to improve the resilience of the current architecture?

Based on the TOGAF standard which of the following is the best answer?

- A. You would determine business continuity requirements, and undertake a gap analysis of the current Enterprise Architecture. You would make recommendations for change requirements to address the situation and create a change request. You would manage a meeting of the Architecture Board to assess and approve the change request. Once approved you would produce a new Request for Architecture Work to activate an ADM cycle to carry out a project to define the change.
- B. You would ensure that the company has in place up-to-date processes for managing change to the current Enterprise Architecture. Based on the scope of the concerns raised you recommend that this be managed at the infrastructure level. Changes should be made to the baseline description of the Technology Architecture. The changes should be approved by the Architecture Board and implemented by change management techniques.
- C. You would request an Architecture Compliance Review with the scope to examine the company's resilience to ransomware attacks. You would identify the departments involved and have them nominate representatives. You would then tailor checklists to address the requirement for increased resilience. You would circulate to the nominated representatives for them to complete. You would then review the completed checklists, identifying and resolving issues. You would then determine and present your recommendations.
- D. You would monitor for technology changes from your existing suppliers that could improve resilience. You would prepare and run a disaster recovery planning exercise for a ransomware attack and analyze the performance of the current Enterprise Architecture. Using the findings, you would prepare a gap analysis of the current Enterprise Architecture. You would prepare change requests to address identified gaps. You would add the changes implemented to the Architecture Repository.

### Answer: A

Explanation:

Business continuity is the ability of an organization to maintain essential functions during and after a disaster or disruption. Business continuity requirements are the specifications and criteria that define the acceptable level of performance and availability of the business processes and services in the event of a disaster or disruption. A gap analysis is a technique that compares the current state of the architecture with the desired state, and identifies the gaps or differences that need to be addressed. A change request is a formal proposal for an amendment to some product or system, such as the architecture. A Request for Architecture Work is a document that describes the scope, approach, and expected outcomes of an architecture project123 The best answer is A, because it describes the steps that would improve the resilience of the current architecture, which is the ability to withstand and recover from a ransomware attack or any other disruption. The steps are:

Determine the business continuity requirements, which specify the minimum acceptable level of performance and availability of the business processes and services in case of a ransomware attack. This would involve identifying the critical business functions, the

recovery time objectives, the recovery point objectives, and the dependencies and resources needed for recovery.

Undertake a gap analysis of the current Enterprise Architecture, which compares the current state of the architecture with the desired state based on the business continuity requirements. This would involve assessing the strengths and weaknesses of the current architecture, the risks and opportunities for improvement, and the gaps or differences that need to be addressed.

Make recommendations for change requirements to address the situation and create a change request. This would involve proposing solutions and alternatives to close the gaps, enhance the resilience, and mitigate the risks of the current architecture. The change request would document the rationale, scope, impact, and benefits of the proposed changes, and seek approval from the relevant stakeholders.

Manage a meeting of the Architecture Board to assess and approve the change request. The Architecture Board is a governance body that oversees the architecture work and ensures compliance with the architecture principles, standards, and goals. The meeting would involve presenting the change request, discussing the pros and cons, resolving any issues or conflicts, and obtaining the approval or rejection of the change request.

Once approved, produce a new Request for Architecture Work to activate an ADM cycle to carry out a project to define the change. The Request for Architecture Work would describe the scope, approach, and expected outcomes of the architecture project that would implement the approved change request. The Request for Architecture Work would initiate a new cycle of the Architecture Development Method (ADM), which is the core process of the TOGAF standard that guides the development and management of the enterprise architecture.

## NEW QUESTION # 56

What is presented as "striking a balance between positive and negative outcomes resulting from the realization of either opportunities or threats?

- A. Risk Management
- B. Agile development
- C. Architecture Security
- D. Transition Management

### Answer: A

Explanation:

Risk Management is the process of identifying, assessing, and responding to risks that may affect the achievement of the enterprise's objectives. Risk Management involves balancing positive and negative outcomes resulting from the realization of either opportunities or threats. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.3 Risk Management.

## NEW QUESTION # 57

Consider the following statements:

The TOGAF ADM requires a partitioning model for architecture development. Architectures are partitioned when different teams need to work on different elements of the architecture at the same time. Partitions can be used to facilitate architecture re-use. Which statements about Architecture Partitioning are correct?

- A. 1, 2 and 3
- B. 1 and 3
- C. 2 and 3
- D. 1 and 2

### Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation from Expert in Enterprise Architecture, guiding in TOGAF and ArchiMate: Architecture Partitioning is a technique supported by TOGAF to manage complexity and scale, especially in large enterprises.

Correct statements:

Statement 2 is correct: Partitioning enables parallel work by multiple teams on different parts of the architecture.

Statement 3 is correct: Partitioning supports architecture re-use by isolating common or shared components.

Why Statement 1 is incorrect:

TOGAF does not mandate a partitioning model. It supports and recommends partitioning where appropriate, but it is not a required element of the ADM.

## NEW QUESTION # 58

Please read this scenario prior to answering the question

You are employed as an Enterprise Architect working within the Enterprise Architecture (EA) team at an electric vehicle manufacturer. The company focuses on designing, manufacturing, and advancing battery technology for sustainable transportation, while also investing in charging infrastructure, autonomous driving systems, and renewable energy integration.

The company is introducing a major change to its vehicle design over a five-year period. This will be a cross-functional effort between hardware and software teams, delivering significant new features in the vehicles they manufacture. It is planned to be developed in phases. An architecture to support strategy has been completed with a roadmap for a set of projects.

The EA team has taken over the architecture for the hardware and software automotive platform used by current vehicles, some of which will be used again in the new vehicle design. The EA team has started to pick which parts of the architecture to use again. The presentation and access to different variations of data that the company plans to offer through its vehicles creates a design challenge. The application portfolio and supporting infrastructure must connect with multiple cloud services and data repositories in different countries to be able to handle the data at a large scale.

Enough of the Business Architecture has been defined, so that work can commence on the Information Systems and Technology Architectures. Those architectures need to be defined to support the primary business services that the company plans to provide. These services will handle and use the data created by vehicles, preparing the way for self-driving vehicles in the future.

The company uses the TOGAF standard as the basis for its Enterprise Architecture framework. The EA team reports to the Chief Technical Officer (CTO), who is the sponsor of the EA program. The CTO requires that the EA team follow the purpose-based EA Capability model as described in the TOGAF Series Guide: A Practitioners' Approach to Developing Enterprise Architecture Following the TOGAF ADM.

Refer to the scenario

How would you plan, organize, and manage the architecture development at this stage?

Based on the TOGAF standard which of the following is the best answer?

- A. Start an iteration of ADM Phase A, perform a Stakeholder Analysis, identifying the key stakeholders and revising the Architecture Vision. Update the Stakeholder map created for the strategic architecture, so it reflects the stakeholders who are now the most important for the projects that are to be developed. Hold a formal review with the CTO, who should decide which projects to include in the Architecture Roadmap and update the Implementation and Migration Plan to reflect the decisions.
- B. Follow a standard pattern for cloud solutions that manage complex data, and which fits with the architecture to support strategy. Develop high-level Target Data, Application and Technology Architectures. Review the Architecture Vision to determine the level of detail, time, and scope of the ADM cycle phases required for architecture development for the project. Identify and estimate the cost of the main work packages. Create an Architecture Roadmap and request the Architecture Board to approve the roadmap. Start the project.
- C. The superior architecture should be used to guide the approach. Review the identified projects, dependencies, and potential overlaps, then decide the order for starting the projects. Develop high-level architecture descriptions. For each project determine how much work is needed, identify reference architectures, and candidate building blocks. Identify the resource needs, considering cost and value. Document the different options, risks, and ways to control them to enable feasibility analysis and trade-off with the stakeholders.
- D. Architecture descriptions for the Application, Data, and Technology Architectures should be developed at a suitable level to address the problems, and to identify the different options. For each project this includes identification of candidate architecture and solution building blocks. Solution providers should be identified, a readiness assessment performed, and an assessment of the viability and fitness of the solution options. The results should be added to the draft Implementation and Migration plan.

### Answer: C

Explanation:

The scenario states that:

- \* A strategic architecture and roadmap already exist.
- \* Business Architecture is complete, so the work now shifts to Information Systems and Technology Architectures (ADM Phases B-D).
- \* The CTO requires use of the purpose-based EA Capability model (from the TOGAF Series Guide: A Practitioner's Approach to Developing Enterprise Architecture Following the TOGAF ADM).
- \* The EA team has to plan, organize, and manage the next stage of architecture development, including - use of existing hardware/software platform components, candidate solutions, feasibility, risks, and prioritization.

Under the purpose-based EA approach, when moving from strategy into defining the next layers of architecture, TOGAF emphasizes:

- \* Using the superior (already-approved) architecture to guide the next ADM cycles - This corresponds to the strategic architecture that is already completed.
- \* Analyzing project dependencies, overlaps, and sequencing

- \* Defining high-level architecture descriptions for the next iteration
- \* Identifying reference architectures and candidate building blocks (especially when reusing existing platform components)
- \* Assessing feasibility, value, cost, and risk for each project
- \* Preparing for stakeholder trade-offs before formalizing the roadmap

These tasks map directly to Option A.

Why Option A is correct

Option A includes exactly what the purpose-based EA approach prescribes at this stage:

- \* "The superior architecture should be used to guide the approach." #Correct - strategic architecture guides the work.
- \* "Review the identified projects, dependencies, and potential overlaps, then decide the order..."

#Correct - sequencing and dependency assessment are core early tasks in Phases B-D planning.

- \* "Develop high-level architecture descriptions." #Correct - Business Architecture is done; now high-level IS/Tech Architecture descriptions are needed.
- \* "Identify reference architectures and candidate building blocks." #Correct - aligns with TOGAF building-block approach, and specifically fits the scenario where existing platform components will be reused.
- \* "Identify resource needs, considering cost and value." #Correct - mandatory for feasibility and planning.
- \* "Document options, risks, and ways to control them to enable feasibility analysis and trade-off with stakeholders." #Correct - this matches ADM guidelines for preparing options and addressing complexity before deeper development.

This is precisely how TOGAF expects the architecture team to plan, organize, and manage an ADM cycle after strategy is set.

## NEW QUESTION # 59

In which phase of the ADM cycle do building blocks become implementation-specific?

- A. Phase E
- B. Phase C
- C. Phase B
- D. Phase D

**Answer: A**

Explanation:

Building blocks are reusable components of business, IT, or architectural capability that can be combined to deliver architectures and solutions. Building blocks can be defined at various levels of detail, depending on the stage of architecture development. In the earlier phases of the ADM cycle (A to D), building blocks are defined in generic terms, such as logical or physical, to provide a high-level view of the architecture. In Phase E: Opportunities and Solutions, building blocks become implementation-specific, meaning that they are linked to specific products, standards, technologies, and vendors that are available in the market. This phase also identifies the delivery vehicles, such as projects, programs, or portfolios, that will realize the building blocks.

## NEW QUESTION # 60

.....

You are in a quest for high quality practice materials like our OGEA-103 preparation exam. We avail ourselves of this opportunity to approach you to satisfy your needs. In order to acquaint you with our OGEA-103 practice materials, we wish to introduce a responsible company dealing with exclusively in the area of OGEA-103 training engine and it is our company which keeps taking care of the readers' requests, desires and feelings about usage of our OGEA-103 study questions in mind.

**Reliable OGEA-103 Test Book:** <https://www.dumpexams.com/OGEA-103-real-answers.html>

The Open Group OGEA-103 Exam Course However, our promise of "No help, full refund" doesn't show our no confidence to our products; oppositely, it expresses our most sincere and responsible attitude to reassure our customers. If you purchase our OGEA-103: TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam test questions materials, we guarantee our products are valid for one year, \*OGEA-103 dumps PDF is printable edition.

You need to resize the new document to optimize it for OGEA-103 the screen, Add Web-formatted images to a page using a variety of methods. However, our promise of "No help, full refund" doesn't show our no confidence to our Authorized OGEA-103 Test Dumps products; oppositely, it expresses our most sincere and responsible attitude to reassure our customers.

## Free PDF Quiz OGEA-103 - Accurate TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Exam Course

If you purchase our OGEA-103: TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam test questions materials, we guarantee our products are valid for one year, \*OGEA-103 dumps PDF is printable edition.

Therefore we will do our utmost to meet their needs, The content is carefully designed for the OGEA-103 exam, rich question bank and answer to enable you to master all the test knowledge in a short period of time.
