FCSS_SOC_AN-7.4 New Dumps Questions | FCSS_SOC_AN-7.4 High Quality

The experts in our company have been focusing on the FCSS_SOC_AN-7.4 examination for a long time and they never overlook any new knowledge. The content of our FCSS_SOC_AN-7.4 study materials has always been kept up to date. We will inform you by E-mail when we have a new version. With our great efforts, our FCSS_SOC_AN-7.4practice dumps have been narrowed down and targeted to the FCSS_SOC_AN-7.4 examination. We can ensure you a pass rate as high as 99%!

Fortinet FCSS - Security Operations 7.4 Analyst Sample Questions (Q13-Q18):

NEW QUESTION # 13
Refer to the exhibits.

The Quarantine Endpoint by EMS playbook execution failed.
What can you conclude from reviewing the playbook tasks and raw logs?

- A. The playbook executed in an ADOM where the incident does not exist.
- B. The admin user does not have the necessary rights to update incidents.
- C. The local connector is incorrectly configured, which is causing JSON API errors.
- D. The endpoint is quarantined, but the action status is not attached to the incident.

Answer: D

NEW QUESTION # 14
How does identifying adversary behavior benefit SOC operations in terms of incident response?

- A. By increasing the time it takes to respond to incidents
- B. By reducing the importance of endpoint security
- C. By providing data for marketing strategies
- D. By allowing for a quicker isolation of affected systems

Answer: D

NEW QUESTION # 15
Your company is doing a security audit To pass the audit, you must take an inventory of all software and applications running on all Windows devices Which FortiAnalyzer connector must you use?

- A. FortiClient EMS
- B. ServiceNow
- C. FortiCASB

- D. Local Host

Answer: A

Explanation:
Requirement Analysis:
The objective is to inventory all software and applications running on all Windows devices within the organization.
This inventory must be comprehensive and accurate to pass the security audit.
Key Components:
FortiClient EMS (Endpoint Management Server):
FortiClient EMS provides centralized management of endpoint security, including software and application inventory on Windows devices.
It allows administrators to monitor, manage, and report on all endpoints protected by FortiClient.
Connector Options:
FortiClient EMS:
Best suited for managing and reporting on endpoint software and applications.
Provides detailed inventory reports for all managed endpoints.
Selected as it directly addresses the requirement of taking inventory of software and applications on Windows devices.
ServiceNow:
Primarily a service management platform.
While it can be used for asset management, it is not specifically tailored for endpoint software inventory.
Not selected as it does not provide direct endpoint inventory management.
FortiCASB:
Focuses on cloud access security and monitoring SaaS applications. Not applicable for managing or inventorying endpoint software.
Not selected as it is not related to endpoint software inventory. Local Host:
Refers to handling events and logs within FortiAnalyzer itself.
Not specific enough for detailed endpoint software inventory.
Not selected as it does not provide the required endpoint inventory capabilities.
Implementation Steps:
Step 1: Ensure all Windows devices are managed by FortiClient and connected to FortiClient EMS. Step 2: Use FortiClient EMS to collect and report on the software and applications installed on these devices.
Step 3: Generate inventory reports from FortiClient EMS to meet the audit requirements.
Reference: Fortinet Documentation on FortiClient EMS FortiClient EMS Administration Guide By using the FortiClient EMS connector, you can effectively inventory all software and applications on Windows devices, ensuring compliance with the security audit requirements.

NEW QUESTION # 16
In managing connectors within a SOC, what is a key benefit of ensuring proper integration?

- A. It ensures seamless data exchange and process automation
- B. It enhances the aesthetic appeal of the SOC
- C. It simplifies the legal compliance of the SOC
- D. It reduces the need for cybersecurity training

Answer: A

NEW QUESTION # 17
Which feature is most important when selecting a connector for integration into a SOC playbook?

- A. The ability to display colorful graphics
- B. The compatibility with existing security infrastructure
- C. The size of the connector's installation file
- D. The connector's country of origin

Answer: B

NEW QUESTION # 18
