When they will be giving their final examination to get Huawei H12-891_V1.0 certification they don't struggle much and do it easily. The results of the customizable H12-891_V1.0 exam dumps can then be used to identify areas of strength and weakness and to create a personalized study plan that focuses on improving in the areas that need the most work. Taking H12-891_V1.0 Practice Tests regularly could help individuals build their confidence, reduce test anxiety, and improve their overall performance.

Huawei H12-891_V1.0 (HCIE-Datacom V1.0) Certification Exam is an advanced level certification exam that is designed for professionals who specialize in data communication technologies. H12-891_V1.0 exam is intended to test the knowledge, skills, and expertise of individuals in designing, implementing, and troubleshooting complex data communication networks. HCIE-Datacom V1.0 certification exam covers various topics, including network architecture, network protocols, network security, network virtualization, and data center technologies.

Free PDF Huawei - H12-891_V1.0 –The Best Reliable Study Materials

To find the perfect HCIE-Datacom V1.0 H12-891_V1.0 practice materials for the exam, you search and re-search without reaching the final decision and compare advantages and disadvantages with materials in the market. With systemic and methodological content within our H12-891_V1.0 practice materials, they have helped more than 98 percent of exam candidates who chose our H12-891_V1.0 guide exam before getting the final certificates successfully.

Huawei H12-891_V1.0 certification exam is an industry-recognized certification that demonstrates the candidate's proficiency in data communication technologies. HCIE-Datacom V1.0 certification exam is designed to help professionals advance in their careers by providing them with the necessary skills and knowledge to design and implement complex data communication networks.

Huawei H12-891_V1.0 certification exam is a four-hour exam that consists of both theoretical and practical questions. H12-891_V1.0 Exam is divided into two parts. The first part is a written exam, which includes multiple-choice questions and short answer questions. The second part is a lab exam, which requires candidates to configure and troubleshoot a real-life network scenario. The lab exam is conducted in a simulated network environment and tests the candidate's ability to apply their knowledge in a practical setting.

Huawei HCIE-Datacom V1.0 Sample Questions (Q96-Q101):

NEW QUESTION # 96

In a VXLAN scenario, which of the following features can be enabled to reduce ARP packet flooding between VTEPs?

- A. ARP broadcast suppression
- B. Port isolation

- C. Local proxy ARP
- D. Host information collection

Answer: A,C,D

Explanation:

VXLAN networks suffer from ARP flooding because ARP requests are broadcasted across all VTEPs in a Layer 2 domain. To reduce ARP flooding, the following mechanisms can be enabled:

A. Local Proxy ARP

Allows the local VTEP to respond to ARP requests without forwarding them across the VXLAN network. The VTEP caches MAC-IP mappings and replies directly to ARP requests, reducing unnecessary flooding.

B. ARP Broadcast Suppression

Converts ARP broadcast packets into unicast or multicast packets to minimize network-wide flooding.

C. Host Information Collection

Collects and stores MAC-IP bindings of endpoints, which can be used by proxy ARP to reduce flooding.

D. Port Isolation

Port isolation prevents communication between devices within the same VLAN but does not help reduce ARP flooding between VTEPs.

NEW QUESTION # 97

In Huawei Open Programmability System (OPS), /ifm/interfaces/interface is the URL used to identify a device's managed object.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

Huawei OPS (Open Programmability System) is a YANG-based network management system that uses RESTful APIs for configuring and managing devices.

/ifm/interfaces/interface is the RESTful URI (Uniform Resource Identifier) that:

* Represents an interface object in the network device.

* Allows querying, configuring, and modifying network interfaces via API requests.

Since the statement is correct, the answer is TRUE.

NEW QUESTION # 98

Congestion management technology can be used to discard data packets in the buffer queue to prevent the buffer queue from being exhausted.

- A. FALSE
- B. TRUE

Answer: A

Explanation:

This statement confuses congestion management with congestion avoidance:

Congestion Management: Refers to techniques like PQ, CQ, WRR, etc., to schedule packets in queues - i.e., manage how packets are sent, not discarded.

Congestion Avoidance: Techniques like WRED are used to preemptively discard packets to avoid full queues - these do discard packets.

Hence, congestion management does NOT discard packets - it's about controlling transmission order and prioritization.

Correct answer: B. FALSE

NEW QUESTION # 99

Which of the following inter-AS MPLS L3VPN solutions does not require MPLS to run between ASBRs?

- A. Option C
- B. Option A
- **C. Option B**
- D. Option D

Answer: C

Explanation:

Comprehensive and Detailed

Inter-AS MPLS L3VPN solutions enable communication between different Autonomous Systems (AS) while maintaining VPN separation. The three primary solutions for inter-AS MPLS L3VPN are:

Option A (Back-to-Back VRF)

MPLS is not required between ASBRs.

VPN routes are exchanged without label switching.

Each ASBR has a VRF instance configured and forwards traffic using plain IP routing.

Option B (eBGP Redistribution of Labeled VPNv4 Routes)

MPLS is not required between ASBRs.

ASBRs exchange labeled VPNv4 routes using eBGP.

The ASBR does not perform label switching but simply forwards packets based on VPNv4 labels.

Option C (Multi-Hop MP-BGP for VPNv4 Routes)

MPLS is required between ASBRs.

ASBRs establish label-switched paths (LSPs) to forward VPN traffic across AS boundaries.

Since Option B relies on labeled VPNv4 routes via eBGP and does not need MPLS between ASBRs, the correct answer is D.

NEW QUESTION # 100

If a router only needs to forward IPv6 packets, you do not need to configure any IPv4 agreements and addresses on that router.

- A. False
- **B. True**

Answer: B

NEW QUESTION # 101
