Prep4sureGuide's Exam Questions Help You Get ServiceNow CAD Certification with Ease

Our to-the-point and trustworthy ServiceNow Certified Application Developer-ServiceNow Exam Questions in three formats for the Certified Application Developer-ServiceNow (CAD) certification exam will surely assist you to qualify for ServiceNow CAD certification. Do not underestimate the value of our ServiceNow CAD Exam Dumps because it is the make-or-break point of your career. Therefore, make the most of this opportunity of getting these superb exam questions for the Financials in ServiceNow CAD certification exam.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q242-Q247):

NEW QUESTION # 242
Assume a table called table exists and contains 3 fields: field1, field2, field3. Examine the Access Control list for table:
Which field or fields can a user with the itil role read?

- A. All fields
- B. filed1 and field3
- C. field3 only
- D. All fields except field3

Answer: D

Explanation:
https://docs.servicenow.com/bundle/tokyo-platform-security/page/administer/contextual-security/concept/access-control-rules.html

NEW QUESTION # 243
(Which default method prints a message with a blue background at the top of the current form?)

- A. g_form.showFieldMessage()
- B. g_form.addInfoMsg()
- C. g_form.showFieldMsg()
- D. g_form.addInfoMessage()

Answer: D

Explanation:
ServiceNow provides multiple ways to show messages to users in the UI, and the correct method depends on whether the message is meant for the top of the form or next to a specific field. In the GlideForm client API, ServiceNow documents g_form.addInfoMessage(String message) as the method that adds an informational message to the top of the form. This is the standard client-side approach for showing an info banner at the top area of the current form and is commonly used in Client Scripts and UI Policies to inform users about guidance, rules, or results of client-side logic. ServiceNow's GlideForm documentation specifically names this method and provides examples of its usage via g_form. By contrast, g_form. showFieldMsg() (and similarly named field-message functions) are used to display messages associated with a particular field location, not as a general blue banner at the top of the form. The option g_form.addInfoMsg() is not the documented default method name. Therefore, the correct answer is g_form.addInfoMessage().

NEW QUESTION # 244
What is the Event Registry?

- A. The Event Log which lists all Events that have been generated
- B. A table containing a record for every Event known to the ServiceNow system which allows ServiceNow to react when Events are generated
- C. The method used in server-side scripts to generate Events and pass parameters
- D. A Workflow which is launched every time an Event is generated; used to debug Events

Answer: B

Explanation:
In ServiceNow, the Event Registry is a table that contains a record for every event recognized by the system. It allows ServiceNow to respond when these events are generated. By registering events, the system can automate activities such as triggering notifications or executing script actions when specific events occur. Therefore, the correct answer is A.
The other options are not accurate descriptions of the Event Registry:
B . The Event Log which lists all Events that have been generated: This describes the Event Log, not the Event Registry.
C . A Workflow which is launched every time an Event is generated; used to debug Events: This is not how the Event Registry functions.
D . The method used in server-side scripts to generate Events and pass parameters: This describes the gs.eventQueue() method, not the Event Registry.
For more detailed information, refer to the official ServiceNow documentation on the Event Registry.

NEW QUESTION # 245
Which of the following is NOT supported by Flow Designer?

- A. Use Delegated Developer
- B. Call a subflow from a flow
- C. Test a flow with rollback
- D. Run a flow from a MetricBase Trigger

Answer: C

Explanation:
Flow Designer is a graphical tool that allows users to automate processes in ServiceNow without coding. The following are supported by Flow Designer:
Call a subflow from a flow. This is a feature that allows users to invoke a subflow, which is a reusable unit of logic, from a flow. This

can help simplify complex flows and avoid duplication of logic.

Use Delegated Developer. This is a feature that allows administrators to delegate the development and maintenance of flows and actions to users who are not administrators. This can help distribute the workload and empower non-admin users to create automations.

Run a flow from a MetricBase Trigger. This is a feature that allows users to trigger a flow based on a MetricBase query, which is a way of analyzing time-series data in ServiceNow. This can help automate actions based on data trends and patterns.

The following is not supported by Flow Designer:

Test a flow with rollback. This is not a feature of Flow Designer, but of Automated Test Framework (ATF), which is a tool that allows users to create and run automated tests on ServiceNow applications and features. ATF supports testing flows with rollback, which means reverting any changes made by the flow during the test execution. Reference: Flow Designer, Automated Test Framework

NEW QUESTION # 246
Which one of the following is NOT a UI Action type?

- A. List banner button
- B. List choice
- C. Form button
- D. Form choice

Answer: D

Explanation:

A UI Action is a button, link, or choice that can be clicked by a user to perform an action, such as submitting a form or running a script. The following are UI Action types:

List choice. This is a UI Action that appears as a choice list on a list of records. It can be used to perform an action on multiple records at once, such as deleting or updating them.

Form button. This is a UI Action that appears as a button on a form. It can be used to perform an action on the current record, such as saving or approving it.

List banner button. This is a UI Action that appears as a button on the banner of a list of records. It can be used to perform an action on the entire list, such as exporting or printing it.

The following is not a UI Action type:

Form choice. This is not a UI Action type, but a field type. A form choice is a field that displays a choice list on a form. It can be used to select a value from a predefined set of options, such as priority or state. References: UI Actions, Field Types

NEW QUESTION # 247
......

We have knowledge point as well as the answers to help you finish CAD Interactive EBook the traiing materials, if you like, it also has the offline version, so that you can continue the study at anytime.

You would receive an email with the ordered CAD products within 24 hours (generally 2 to 12 hours) after you place the order, We have online and offline chat service stuff, if you CAD Interactive EBook have any questions, you can contact us, we will give you reply as quickly as possible.
