Marvelous Integration-Architect Exam Questions: Salesforce Certified Integration Architect Demonstrate Latest Training Quiz - Pass4sureCert

Our loyal customers give us strong support in the past ten years. Luckily, our Integration-Architect learning materials never let them down. Our company is developing so fast and healthy. Up to now, we have made many achievements. Also, the Integration-Architect study guide is always popular in the market. All in all, we will keep up with the development of the society. And we always keep updating our Integration-Architect Practice Braindumps to the latest for our customers to download. Just buy our Integration-Architect exam questions and you will find they are really good!

To become a Salesforce Certified Integration Architect, an individual must have extensive experience in Salesforce integration projects. They should have a deep understanding of various integration patterns and techniques, such as point-to-point integration, middleware-based integration, and API-led integration. They should also be familiar with various integration technologies, such as REST, SOAP, and OData.

Salesforce Integration-Architect Exam, also known as the Salesforce Certified Integration Architect Exam, is a highly specialized

certification that focuses on the design and implementation of complex integration solutions using the Salesforce platform. Salesforce Certified Integration Architect certification is designed for professionals who have a deep understanding of integration patterns, best practices, and technologies.

Salesforce Certified Integration Architect Sample Questions (Q71-Q76):

NEW QUESTION # 71
Northern Trail Outfitters (NTO) has recently changed their Corporate Security Guidelines. The guidelines require that all cloud applications pass through a secure firewall before accessing on-premise resources. NTO is evaluating middleware solutions to integrate cloud applications with on-premise resources and services.
What are two considerations an Integration Architect should evaluate before choosing a middleware solution?
Choose 2 answers

- A. The middleware solution is capable of establishing a secure API gateway between cloud applications and on-premise resources.
- B. An API gateway component is deployable behind a Demilitarized Zone (DMZ) or perimeter network.
- C. The middleware solution enforces the OAuth security protocol.
- D. The middleware solution is able to interface directly with databases via an ODBC connection string.

Answer: A,B

Explanation:
Explanation
An API gateway is a component that acts as a single point of entry for all cloud applications to access on-premise resources and services. It can provide security, routing, transformation, and other features to facilitate integration. An API gateway component should be deployable behind a DMZ or perimeter network, which is a subnetwork that separates the internal network from the external network and provides an additional layer of security. The middleware solution should also be capable of establishing a secure API gateway between cloud applications and on-premise resources, which may involve using protocols such as HTTPS, SSL/TLS, or VPN. The OAuth security protocol is not a requirement for choosing a middleware solution, as it is a standard for authorizing access to resources on behalf of a user. The middleware solution's ability to interface directly with databases via an ODBC connection string is also not a requirement, as it is a specific feature that may or may not be needed depending on the integration scenario. NEW QUESTION # 72
Northern Trail Outfitters needs to use Shield Platform Encryption to encrypt social security numbers in order to meet a business requirement.
Which two considerations should an Integration Architect do prior to the implementation of Shield Platform Encryption?
Choose 2 answers

- A. Encrypt all the data so that it is secure.
- B. Use Shield Platform Encryption as a user authentication or authorization tool.
- C. Encrypt the data using the most current key.
- D. Review shield platform encryption configurations.

Answer: C,D

NEW QUESTION # 73
A global financial company sells financial products and services that include the following:
1. Bank Accounts
2. Loans
3. Insurance
The company has a core banking system that is state of the art and is the master system to store financial transactions, financial products and customer information. The core banking system currently processes 10M financial transactions per day. The CTO for the company is considering building a community port so that customers can review their bank account details, update their information and review their account financial transactions.
What should an integration architect recommend as a solution to enable customer community users to view their financial transactions?

- A. Use Salesforce External Service to display financial transactions in a community lightningpage.
- B. Use Salesforce Connect to display the financial transactions as an external object.
- C. Use Iframe to display core banking financial transactions data in the customer community.
- D. UseSalesforce Connect to display the financial transactions as an external object.

Answer: D

Explanation:
The integration architect should recommend using Salesforce Connect to display the financial transactions as an external object. SalesforceConnect is a feature that allows you to integrate external data sources with Salesforce and access them in real time via external objects. External objects are similar to custom objects, but they store metadata only and not data. You can use external objects to display data from the core banking system in the customer community without copying or syncing the data. You can also use standard Salesforce features, such as reports, dashboards, or global search, with external objects. Salesforce External Serviceis a feature that allows you to import an external schema definitionand generate an Apex wrapper class that can invoke an external service. This is useful for integrating complex business processes or workflows with Salesforce, but not for displaying datain a community lightning page. Iframe is a HTML element that allows you to embed another web page within a web page. This is not a recommended solution for displaying data in a customer community, as it can pose security risks, performance issues, or userinterface problems.

NEW QUESTION # 74
Northern Trail Outfitters (NTO) has hired an Integration Architect to design the integrations between existing systems and a new instance of Salesforce. NTO has the following requirements:
1. Initial load of 2M Accounts, 5.5M Contacts, 4.3M Opportunities, and 45k Products into the new org.
2. Notification of new and updated Accounts and Contacts needs to be sent to 3 external systems.
3. Expose custom business logic to 5 external applications in a highly secure manner.
4. Schedule nightly automated dataflows, recipes and data syncs.
Which set of APIs are recommended in order to meet the requirements?

- A. Bulk API, Chatter REST API, Apex SOAP API, Tooling API
- B. Bulk API, Streaming API, Apex SOAP API, Analytics REST API
- C. Bulk API, Chatter REST API, Apex REST API, Analytics REST API
- D. Bulk API, Streaming API, Apex REST API, Analytics REST API

Answer: D

NEW QUESTION # 75
Northern Trail Outfitters needs to send order and line items directly to an existing finance application webservice when an order if fulfilled. It is critical that eac order reach the finance application exactly once for accurate invoicing.
What solution should an architect propose?

- A. Trigger invokes Queueable Apex method, with custom error handling process.
- B. Button press invokes synchronous callout, with user handling retries in case of error
- C. Trigger makes @future Apex method, with custom error handling process.
- D. Outbound Messaging, which will automatically handle error retries to the service.

Answer: A
