The clients only need 20-30 hours to learn the MB-820 exam questions and prepare for the test. Many people may complain that we have to prepare for the test but on the other side they have to spend most of their time on their most important things such as

their jobs, learning and families. But if you buy our MB-820 Study Guide you can both do your most important thing well and pass the MB-820 test easily because the preparation for the test costs you little time and energy.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q69-Q74):

NEW QUESTION # 69

You create a Business Central report.

You need to insert values on the Request page to be saved for the next time the report is run.

What should you do?

- A. Set the SaveValues property to true.
- B. Set the TransactionType property to Update.
- C. Set the UseRequestPage property to true.
- D. Declare a 'SaveValues' variable and assign it to true on the OnOpenPage() trigger.

Answer: D

Explanation:

To ensure that the values inserted on the Request page of a Business Central report are saved for the next time the report is run, the SaveValues property (D) should be set to true. This property is available on the Request page of the report and, when set to true, allows the system to remember the values entered by the user, so they do not have to re-enter them each time they run the report. This feature enhances user experience by reducing repetitive data entry and ensuring consistency in report parameters across multiple executions. The other options mentioned, such as setting the Transaction Type property to Update (A) or declaring a Savevalues variable in the OnOpenPage trigger (B), are not directly related to saving user input on a report's Request page.

NEW QUESTION # 70

You need to assist the development department with setting up Visual Studio Code to design the purchase department extension, meeting the quality department requirements.

How should you complete the app.json file? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 71

A company plans to integrate tests with its build pipelines.

The company has two Docker sandbox environments: SandboxA and SandboxB.

You observe the following:

* SandboxA is configured without the Test Toolkit installed.

* SandboxB must be configured from scratch. The Test Toolkit must be installed in SandboxB during configuration.

You need to configure the sandbox environments.

How should you complete the cmdlets? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

Explanation:

Based on the PowerShell script snippet you've provided and the scenario described, you need to configure Docker sandbox environments for a company with specific requirements for Test Toolkit installations.

For SandboxA, since it is configured without the Test Toolkit installed, you would typically use the PowerShell cmdlet Install-TestToolkitToBcContainer to install the Test Toolkit into the Business Central Docker container.

For SandboxB, which must be configured from scratch with the Test Toolkit installed during configuration, you would include the Test Toolkit as part of the New-BcContainer script block that creates the container.

The relevant cmdlets and parameters for SandboxB would include:

* -includeTestToolkit: This parameter ensures that the Test Toolkit is included during the creation of the new container.

Given the limited context from the image, here's how you should complete the cmdlets for SandboxB:

* Add `-includeTestToolkit` in the `New-BcContainer` script to ensure the Test Toolkit is installed when creating SandboxB.

* Since you are setting up SandboxB from scratch, you don't need to run `Install-TestToolkitToBcContainer` separately as the toolkit will be included at the time of container creation with the `-includeTestToolkit` parameter.

For the `New-BcContainer` cmdlet, you would fill in the placeholders with the appropriate values for `artifactUrl`, `imageName`, and `licenseFile` if they are required for your specific setup.

NEW QUESTION # 72

A company has a Business Central online environment.

You are exporting a file from a client by using the `DownloadFromStream` method.

You need to create an `InStream` data type to send the data

Which solution should you use?

- A. Use `OeateInStream` method from codeunit "Temp Blob".
- B. Use `OeateInStream` method for BLOB field of "TempBlob" table.
- C. Use `CreateInStream` method for File type variable.

Answer: A

NEW QUESTION # 73

You need to configure the Subcontract Docs extension to translate the fields.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION # 74
