Our website is very secure and regular platform, you can be assured to download the version of our Deep-Security-Professional study torrent.

Trend Micro Certified Professional for Deep Security Sample Questions (Q70-Q75):

NEW QUESTION # 70

Which of the following statements is true regarding Deep Security Relays?

- A. Deep Security Agents communicate with Deep Security Relays to obtain security up-dates.
- B. Both 32-bit and 64-bit Deep Security Agents can be promoted to a Deep Security Relay.
- C. Deep Security Relays are able to process Deep Security Agent requests during updates.
- D. Deep Security Agents promoted to Deep Security Relays no longer provide the security capabilities enabled by the Protection Modules.

Answer: A

NEW QUESTION # 71

Policies in Deep Security can include a Context value. Which of the following statements re-garding Context is correct?

- A. The Context provides Deep Security Agents with location awareness and are associated with Web Reputation Rules only.
- B. The Context provides Deep Security Agents with location awareness and are associated with Anti- Malware and Web Reputation Rules.
- C. The Context provides Deep Security Agents with location awareness and are associated with Log Inspection and Integrity Monitoring Rules.
- D. The Context provides Deep Security Agents with location awareness and are associated with Firewall and Intrusion Prevention Rules.

Answer: D

Explanation:

The Context setting in Deep Security policies gives agents location awareness (such as "Office," "Data Center," or "Untrusted"), which affects Firewall and Intrusion Prevention rules. The context can change dynamically based on network/environment, allowing adaptive protection.

From the official documentation:

"Context provides location awareness and is associated with Firewall and Intrusion Prevention rules, allowing policies to adapt rule application based on the protected computer's environment." Option B is correct.

Options A, C, D are incorrect (context is not associated with Anti-Malware, Web Reputation, Log Inspection, or Integrity Monitoring rules).

NEW QUESTION # 72

The Overrides settings for a computer are displayed in the exhibit. Which of the following statements is true regarding the displayed configuration?

- A. The Web Reputation and Application Control Protection Modules have been assigned a different policy that the other Protection Modules and as a result, are displayed with overrides.
- B. The configuration for the Protection Modules is inherited from the policy assigned to this computer, except for the configuration of the Web Reputation and Application Control Protection Modules which have been set at the computer level.
- C. The Protection Modules identified as Inherited in the exhibit have not yet been enabled. Only the Web Reputation and Application Control Protection Modules have been enabled at this point.
- D. The Protection Modules identified as Inherited in the exhibit have not yet been config-ured. Only the Web Reputation and Application Control Protection Modules have been configured.

Answer: D

NEW QUESTION # 73

Based on the configuration setting highlighted in the exhibit, what behavior can be expected during a malware scan?

- A. With the highlighted setting enabled, Deep Security Agents will scan files for known malware as well as newly encountered malware by accessing the Suspicious Objects List.
- B. With the highlighted setting enabled, Deep Security Agents will scan files for unknown malware using Predictive Machine Learning.
- C. With the highlighted setting enabled, Deep Security Agents will scan files for viruses and malware using supplementary aggressive detection pattern files.
- D. With the highlighted setting enabled, Deep Security Agents will scan files for known viruses and malware using patterns and any files deemed suspicious will be submitted to a configured Deep Discovery Analyzer for further analysis.

Answer: A

NEW QUESTION # 74

Which of the following statements correctly identifies the purpose of the Integrity Monitoring Protection Module?

- A. The Integrity Monitoring Protection Module monitors critical operating system objects such as services, processes, registry keys and ports to detect and report malicious or unexpected changes.
- B. The Integrity Monitoring Protection Module monitors traffic to verify the integrity of incoming traffic to identify protocol deviations, packets fragments and other protocol anomalies.
- C. The Integrity Monitoring Protection Module monitors incoming traffic to confirm the integrity of header information including packet source and destination details.
- D. The Integrity Monitoring Protection Module monitors and analyzes the integrity of application logs to identify tampering, corruption and other suspicious modifications to the logs.

Answer: A

NEW QUESTION # 75

.....
