

Effective Way to Prepare for the Juniper JN0-637 Certification Exam

2026 Latest SureTorrent JN0-637 PDF Dumps and JN0-637 Exam Engine Free Share: <https://drive.google.com/open?id=1gKJcHD6jh-BH001AKTAjn9a2SpJucFQL>

Being devoted to this area for over ten years, our experts keep the excellency of our Security, Professional (JNCIP-SEC) exam question like always. They are distinguished experts in this area who can beef up your personal capacity. By cutting through the clutter of tremendous knowledge, they picked up the essence into our JN0-637 guide prep. Up to now our JN0-637 real exam materials become the bible of practice material of this industry. Ten years have gone, and three versions have been made for your reference. They made the biggest contribution to the efficiency and quality of our Security, Professional (JNCIP-SEC) practice materials, and they were popularizing the ideal of passing the exam easily and effectively. All JN0-637 Guide prep is the successful outcomes of professional team.

You may be upset about the too many questions in your JN0-637 test preview. Now, you will clear your worries. Our JN0-637 test engine can allow unlimited practice your exam. With the options to highlight the missed questions, you can know your mistakes in your JN0-637 test training, then, you can practice with purpose. If you want to have 100% confidence, you can practice until you get right. Besides, you can do marks where possible, so as to review and remember next time. Through effort and practice, you can get high scores in your Juniper JN0-637 real test.

Latest JN0-637 Practice Materials: Security, Professional (JNCIP-SEC) offer you the most accurate Exam Questions - SureTorrent

The loss of personal information in the information society is indeed very serious, but JN0-637 guide materials can assure you that we will absolutely protect the privacy of every user. Our JN0-637 study braindumps users are all over the world, is a very international product, our JN0-637 Exam Questions are also very good in privacy protection. And we offer good services on our JN0-637 learning guide to make sure that every detail is perfect.

Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q99-Q104):

NEW QUESTION # 99

After downloading the new IPS attack database, the installation of the new database fails. What caused this condition?

- A. The new attack database was too large for the device on which it was being installed.
- B. Some of the new attack entries were already in use and had to be deactivated before installation.
- C. The new attack database was revoked between the time it was downloaded and installed.
- **D. The new attack database no longer contained an attack entry that was in use.**

Answer: D

NEW QUESTION # 100

Exhibit.

Referring to the exhibit, which two statements are true? (Choose two.)

- **A. The c-1 TSYS has a reservation for the security flow resource.**
- B. The c-1 TSYS cannot use any security flow resources.
- C. The c-1 TSYS has no reservation for the security flow resource.
- **D. The c-1 TSYS can use security flow resources up to the system maximum.**

Answer: A,D

Explanation:

The system security profile named sp-1 has designated resources for policies and zones with a maximum of 100 and a reservation of 50 each. For NAT with no port address translation (nat-nopat- address), there is a maximum of 115 and a reservation of 100, and for static NAT rules (nat-static-rule), there is a maximum of 125 with 100 reserved.

When considering tenant systems, the profile applied (sp-1) will dictate the resources available to the tenant system named c-1.

The c-1 TSYS has a reservation for the security flow resource. - This would be true if the 'security flow resource' refers to policies and zones since there are reservations made in the profile sp-1.

The c-1 TSYS can use security flow resources up to the system maximum. - This is generally true for any tenant system unless there are explicit limits set that are lower than the system maximum.

NEW QUESTION # 101

You want to create a connection for communication between tenant systems without using physical revenue ports on the SRX Series device.

What are two ways to accomplish this task? (Choose two.)

- A. Use an interconnect VPLS switch.
- B. Use an external router.
- **C. Use a point-to-point logical tunnel.**
- **D. Use a secure wire.**

Answer: C,D

Explanation:

Secure wire and logical tunnels provide internal connectivity options for isolated tenant systems within an SRX device, avoiding the need for physical interfaces. Secure wire maintains security context, while logical tunnels facilitate inter-system communication. More on this can be found at Juniper Tenant Systems Documentation.

To create a connection between tenant systems without using physical interfaces on an SRX Series device, you have two effective options:

* Secure Wire (Answer C): This feature allows you to create a secure, internal connection between security zones. Essentially, traffic is bridged between two zones without needing to pass through physical interfaces, providing a "virtual" wire.

Configuration Example:

bash

Copy code

```
set security zones security-zone zone1 interfaces ge-0/0/0.0 host-inbound-traffic system-services all set security zones security-zone zone2 interfaces ge-0/0/1.0 host-inbound-traffic system-services all set security secure-wire secure-wire1 from-zone zone1 to-zone zone2
```

* Point-to-Point Logical Tunnel (Answer D): This establishes a virtual connection between two different points (zones or systems) within the SRX device using logical interfaces like lt (logical tunnel interfaces). No physical ports are required, and it's useful for

connecting isolated tenant systems.

Configuration Example:

bash

Copy code

```
set interfaces lt-0/0/0 unit 0 family inet address 192.168.1.1/30
```

```
set interfaces lt-0/0/1 unit 0 family inet address 192.168.1.2/30
```

```
set security zones security-zone zone1 interfaces lt-0/0/0.0
```

```
set security zones security-zone zone2 interfaces lt-0/0/1.0
```

Both methods are suitable for connecting systems within the SRX without using physical interfaces.

NEW QUESTION # 102

you must find an infected host and where the attack came from using the Juniper ATP Cloud.

Which two monitor workspaces will return the requested information? (Choose Two)

- A. Threat Sources
- B. Encrypted Traffic
- C. File Scanning
- D. Hosts

Answer: A,D

Explanation:

To find an infected host and where the attack came from using the Juniper ATP Cloud, you need to use the Hosts and Threat Sources monitor workspaces.

The other options are incorrect because:

B) The File Scanning monitor workspace shows the files that have been scanned by the Juniper ATP Cloud and their verdicts (clean, malicious, or unknown). It does not show the infected hosts or the attack sources¹.

D) The Encrypted Traffic monitor workspace shows the encrypted traffic that has been decrypted by the Juniper ATP Cloud and the certificates that have been used. It does not show the infected hosts or the attack sources².

Therefore, the correct answer is A and C. You need to use the Hosts and Threat Sources monitor workspaces to find an infected host and where the attack came from using the Juniper ATP Cloud.

To do so, you need to perform the following steps:

For Hosts, you need to access the Hosts monitor workspace in the Juniper ATP Cloud WebUI by selecting Monitor > Hosts. You can see the list of hosts that have been detected by the Juniper ATP Cloud and their risk scores, infection levels, and threat categories. You can filter the hosts by various criteria, such as IP address, hostname, domain, or threat category. You can also drill down into each host to see the details of the files, applications, and incidents associated with the host. You can identify the infected host by looking for the host with the highest risk score, infection level, or threat category³.

For Threat Sources, you need to access the Threat Sources monitor workspace in the Juniper ATP Cloud WebUI by selecting Monitor > Threat Sources. You can see the list of threat sources that have been detected by the Juniper ATP Cloud and their risk scores, threat categories, and geolocations.

You can filter the threat sources by various criteria, such as IP address, domain, or threat category.

You can also drill down into each threat source to see the details of the files, applications, and incidents associated with the threat source. You can identify the attack source by looking for the threat source with the highest risk score, threat category, or geolocation that matches the infected host.

Reference: File Scanning

Encrypted Traffic

Hosts

[Threat Sources]

NEW QUESTION # 103

You have deployed automated threat mitigation using Security Director with Policy Enforcer, Juniper ATP Cloud, SRX Series devices, Forescout, and third-party switches. In this scenario, which device is responsible for communicating directly to the third-party switches when infected hosts need to be blocked?

- A. Juniper ATP Cloud
- B. Policy Enforcer
- C. SRX Series device
- D. Forescout

Answer: B

Explanation:

Policy Enforcer receives these policies and translates them into device-specific commands. It then communicates with the third-party switches (using protocols like SNMP, RADIUS, or vendor-specific APIs) to enforce those commands, such as blocking the infected hosts' MAC addresses or port access.

Centralized Enforcement: Policy Enforcer acts as the central point of enforcement for Security Director policies, ensuring consistent security across the network. Multi-Vendor Support: It can interact with a wide range of network devices, including switches from different vendors.

Automation: Policy Enforcer automates the policy enforcement process, enabling rapid response to threats.

NEW QUESTION # 104

.....

With the help of JN0-637 guide questions, you can conduct targeted review on the topics which to be tested before the exam, and then you no longer have to worry about the problems that you may encounter a question that you are not familiar with during the exam. With JN0-637 Learning Materials, you will not need to purchase any other review materials. Please be assured that with the help of JN0-637 learning materials, you will be able to successfully pass the exam.
