

Free PDF Quiz Confluent - CCAAK - Useful Reliable Confluent Certified Administrator for Apache Kafka Test Topics

What's more, part of that PassExamDumps CCAAK dumps now are free: https://drive.google.com/open?id=1dj56ntwQT1pNI-Y7VHiJ9Tb1U_h2wR08

PassExamDumps offers a free demo of Confluent CCAAK exam dumps before the purchase to test the features of the products. PassExamDumps also offers 12 months of free Confluent CCAAK Exam Questions updates if the CCAAK certification exam content changes after purchasing our CCAAK exam dumps.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.
Topic 2	<ul style="list-style-type: none">• Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.
Topic 3	<ul style="list-style-type: none">• Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.
Topic 4	<ul style="list-style-type: none">• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.

Topic 5	<ul style="list-style-type: none"> • Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.

Exam CCAAK Discount, Valid CCAAK Exam Fee

Our CCAAK test material can help you focus and learn effectively. You don't have to worry about not having a dedicated time to learn every day. You can learn our CCAAK exam torrent in a piecemeal time, and you don't have to worry about the tedious and cumbersome learning content. We will simplify the complex concepts by adding diagrams and examples during your study. By choosing our CCAAK test material, you will be able to use time more effectively than others and have the content of important information in the shortest time. And you can pass the CCAAK exam easily and successfully.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q55-Q60):

NEW QUESTION # 55

What are benefits to gracefully shutting down brokers? (Choose two.)

- A. It will automatically re-elect leaders on restart.
- **B. It will migrate any partitions the server is the leader for to other replicas prior to shutting down.**
- C. It will balance the partitions across brokers before restarting.
- **D. It will sync all its logs to disk to avoid needing to do any log recovery when it restarts.**

Answer: B,D

Explanation:

A graceful shutdown ensures that logs are flushed to disk, minimizing recovery time during restart.

Kafka performs controlled leader migration during a graceful shutdown to avoid disruption and ensure availability.

NEW QUESTION # 56

What are important factors in sizing a ksqldb cluster? (Choose three.)

- **A. Number of Partitions**
- **B. Number of Queries**
- C. Data Encryption
- **D. Data Schema**
- E. Topic Data Retention

Answer: A,B,D

Explanation:

The complexity of the schema (number of fields, data types, etc.) affects processing and memory usage.

Each ksqldb persistent query consumes resources (CPU, memory), so more queries require more capacity.

More partitions increase parallelism, but also resource usage, especially in scaling and state management.

NEW QUESTION # 57

A company is setting up a log ingestion use case where they will consume logs from numerous systems. The company wants to tune Kafka for the utmost throughput.

In this scenario, what acknowledgment setting makes the most sense?

- A. acks=undefined
- B. acks=1
- **C. acks=0**

- D. acks=all

Answer: C

Explanation:

acks=0 provides the highest throughput because the producer does not wait for any acknowledgment from the broker. This minimizes latency and maximizes performance.

However, it comes at the cost of no durability guarantees - messages may be lost if the broker fails before writing them. This setting is suitable when throughput is critical and occasional data loss is acceptable, such as in some log ingestion use cases where logs are also stored elsewhere.

NEW QUESTION # 58

An employee in the reporting department needs assistance because their data feed is slowing down. You start by quickly checking the consumer lag for the clients on the data stream.

Which command will allow you to quickly check for lag on the consumers?

- A. bin/kafka-consumer-lag.sh
- B. bin/kafka-consumer-group-throughput.sh
- C. bin/kafka-consumer-groups.sh
- D. bin/kafka-reassign-partitions.sh

Answer: C

Explanation:

The kafka-consumer-groups.sh script is used to inspect consumer group details, including consumer lag, which indicates how far behind a consumer is from the latest data in the partition.

The typical usage is bin/kafka-consumer-groups.sh --bootstrap-server <broker> --describe --group <group_id>

NEW QUESTION # 59

A Kafka administrator notices that their consumers of Topic X are starting to fall behind. The administrator sees that Topic X has four partitions, and the consumer group has two consumers.

Which change can increase the performance of the Consumer Group?

- A. Create a new consumer group for Topic X containing two (2) consumers.
- B. Increase the partitions in Topic X.
- C. Increase the number of consumers in the consumer group.
- D. Decrease the consumer acknowledgment property to increase throughput.

Answer: C

Explanation:

With 4 partitions and only 2 consumers, some consumers are handling multiple partitions, which may cause lag if processing is slow. By increasing the number of consumers in the group (up to 4), Kafka can assign one partition per consumer, improving parallelism and throughput.

NEW QUESTION # 60

.....

If you must complete your goals in the shortest possible time, our CCAAK exam materials can give you a lot of help. For our CCAAK study guide can help you pass your exam after you study with them for 20 to 30 hours. And our products are global, and you can purchase our CCAAK training guide is wherever you are. Believe us, our products will not disappoint you. Our global users can prove our strength.
