

Databricks-Certified-Data-Analyst-Associate考試心得 | 100%通過|真正的問題

2026 KaoGuTi最新的Databricks-Certified-Data-Analyst-Associate PDF版考試題庫和Databricks-Certified-Data-Analyst-Associate考試問題和答案免費分享：<https://drive.google.com/open?id=1H6ImvvyQCDI-i-rYCtMgyW-33yL7D02U>

很多準備參加Databricks Databricks-Certified-Data-Analyst-Associate 認證考試的考生在網上也許看到了很多網站也線上提供有關Databricks Databricks-Certified-Data-Analyst-Associate 認證考試的資源。但是我們的KaoGuTi是唯一一家由頂尖行業專家研究的參考材料研究出來的考試練習題和答案的網站。我們的資料能確保你第一次參加Databricks Databricks-Certified-Data-Analyst-Associate 認證考試就可以順利通過。

Databricks Databricks-Certified-Data-Analyst-Associate 考試大綱：

主題	簡介
主題 1	Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moreover, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.
主題 2	Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.
主題 3	SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.
主題 4	Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data.

主題 5	• Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints • warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint • warehouses, trade-off between cluster size and cost for Databricks SQL endpoints • warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.

Databricks-Certified-Data-Analyst-Associate考試內容 & Databricks-Certified-Data-Analyst-Associate認證資料

我相信不論在哪個行業工作的人都希望自己有很好的職業前景。當然在競爭激烈的IT行業裏面也不例外。在IT行業中工作的專業人士也希望自己有個很好的提升機會和很大的提升空間。很多專業的IT人士都知道Databricks Databricks-Certified-Data-Analyst-Associate 認證考試可以幫你滿足這些願望的。而KaoGuTi是一個能幫助你成功通過Databricks Databricks-Certified-Data-Analyst-Associate 的網站。

最新的 Data Analyst Databricks-Certified-Data-Analyst-Associate 免費考試真題 (Q49-Q54):

問題 #49

Which of the following benefits of using Databricks SQL is provided by Data Explorer?

- A. It can be used to run UPDATE queries to update any tables in a database.
- **B. It can be used to view metadata and data, as well as view/change permissions.**
- C. It can be used to produce dashboards that allow data exploration.
- D. It can be used to make visualizations that can be shared with stakeholders.
- E. It can be used to connect to third party BI tools.

答案: B

解題說明:

Data Explorer is a user interface that allows you to discover and manage data, schemas, tables, models, and permissions in Databricks SQL. You can use Data Explorer to view schema details, preview sample data, and see table and model details and properties. Administrators can view and change owners, and admins and data object owners can grant and revoke permissions¹.
Reference: Discover and manage data using Data Explorer

問題 #50

A data analysis team is working with the table `bronze` SQL table as a source for one of its most complex projects. A stakeholder of the project notices that some of the downstream data is duplicative. The analysis team identifies table `bronze` as the source of the duplication.

Which of the following queries can be used to deduplicate the data from table `bronze` and write it to a new table `silver`?

A)

```
CREATE TABLE table_silver AS
SELECT DISTINCT *
FROM table_bronze;
```

B)

```
CREATE TABLE table_silver AS
INSERT *
FROM table_bronze;
```

C)

```
CREATE TABLE table_silver AS
MERGE DEDUPLICATE *
```

FROM table_bronze;
D)
INSERT INTO TABLE table_silver
SELECT * FROM table_bronze;
E)
INSERT OVERWRITE TABLE table_silver
SELECT * FROM table_bronze;

- **A. Option A**
- B. Option D
- C. Option C
- D. Option E
- E. Option B

答案： A

解題說明：

Option A uses the SELECT DISTINCT statement to remove duplicate rows from the table_bronze and create a new table table_silver with the deduplicated data. This is the correct way to deduplicate data using Spark SQL¹². Option B simply inserts all the rows from table_bronze into table_silver, without removing any duplicates. Option C is not a valid syntax for Spark SQL, as there is no MERGE DEDUPLICATE statement. Option D appends all the rows from table_bronze into table_silver, without removing any duplicates. Option E overwrites the existing data in table_silver with the data from table_bronze, without removing any duplicates. Reference: Delete Duplicate using SPARK SQL, Spark SQL - How to Remove Duplicate Rows

問題 #51

A data analyst has been asked to produce a visualization that shows the flow of users through a website. Which of the following is used for visualizing this type of flow?

- A. Word Cloud
- B. Pivot Table
- C. Heatmap
- **D. Sankey**
- E. Ichoropleth

答案： D

解題說明：

A Sankey diagram is a type of visualization that shows the flow of data between different nodes or categories. It is often used to represent the movement of users through a website, as it can show the paths they take, the sources they come from, the pages they visit, and the outcomes they achieve. A Sankey diagram consists of links and nodes, where the links represent the volume or weight of the flow, and the nodes represent the stages or steps of the flow. The width of the links is proportional to the amount of flow, and the color of the links can indicate different attributes or segments of the flow. A Sankey diagram can help identify the most common or popular user journeys, the bottlenecks or drop-offs in the flow, and the opportunities for improvement or optimization. Reference: The answer can be verified from Databricks documentation which provides examples and instructions on how to create Sankey diagrams using Databricks SQL Analytics and Databricks Visualizations. Reference links: Databricks SQL Analytics - Sankey Diagram, Databricks Visualizations - Sankey Diagram

問題 #52

A data analyst has a managed table table_name in database database_name. They would now like to remove the table from the database and all of the data files associated with the table. The rest of the tables in the database must continue to exist. Which of the following commands can the analyst use to complete the task without producing an error?

- A. DELETE TABLE table_name FROM database_name;
- **B. DROP TABLE database_name.table_name;**
- C. DELETE TABLE database_name.table_name;
- D. DROP TABLE table_name FROM database_name;
- E. DROP DATABASE database_name;

答案： B

問題 #53

The stakeholders.customers table has 15 columns and 3,000 rows of data

a. The following command is run:

After running `SELECT * FROM stakeholders.eur_customers`, 15 rows are returned. After the command executes completely, the user logs out of Databricks.

After logging back in two days later, what is the status of the stakeholders.eur_customers view?

- A. The view remains available but attempting to `SELECT` from it results in an empty result set because data in views are automatically deleted after logging out.
- B. The view has been converted into a table.
- C. The view is not available in the metastore, but the underlying data can be accessed with `SELECT * FROM delta.`stakeholders.eur_customers``.
- D. The view has been dropped.
- E. The view remains available and `SELECT * FROM stakeholders.eur_customers` will execute correctly.

答案: E

解題說明:

In Databricks, a view is a saved SQL query definition that references existing tables or other views. Once created, a view remains persisted in the metastore (such as Unity Catalog or Hive Metastore) until it is explicitly dropped.

Key points:

Views do not store data themselves but reference data from underlying tables.

Logging out or being inactive does not delete or alter views.

Unless a user or admin explicitly drops the view or the underlying data/table is deleted, the view continues to function as expected.

Therefore, after logging back in-even days later-a user can still run `SELECT * FROM stakeholders.eur_customers`, and it will return the same data (provided the underlying table hasn't changed).

問題 #54

.....

世界500強企業中，有超過2/3的企業選擇了 Databricks 電子商務軟體產品作為其核心的運用。因此，獲得 Databricks 的認證，即使在強手林立的競爭環境中，你同樣能夠脫穎而出。考生想要通過 Databricks-Certified-Data-Analyst-Associate 考試，最快速的方式是使用 Databricks 的 Databricks-Certified-Data-Analyst-Associate 考題，很多考生都是通過這種方式成功通過考試，可以快速掌握考試的相關資訊。
