

Valid F5CAB1 Exam Review & F5CAB1 Reliable Test Questions

We provide first-rate service on the F5CAB1 learning prep to the clients and they include the service before and after the sale, 24-hours online customer service and long-distance assistance, the refund service and the update service. The client can try out our and download F5CAB1 guide materials freely before the sale and if the client have problems about our product after the sale they can contact our customer service at any time. We provide 24-hours online customer service which replies the client's questions and doubts about our F5CAB1 training quiz and solve their problems.

We hope you can find the information you need at any time while using our F5CAB1 study materials. In addition to the content updates, our system will also be updated for the F5CAB1 training materials. If you have any opinions, you can tell us that our common goal is to create a product that users are satisfied with. We have three different F5CAB1 Exam Braindumps for you to choose: the PDF, Software and APP online. And the varied displays can help you study at any time and condition.

F5 F5CAB1 Reliable Test Questions & Test F5CAB1 King

It is not hard to find that there are many different kinds of products in the education market now. It may be difficult for users to determine the best way to fit in the complex choices. We can tell you with confidence that the F5CAB1 practice materials are superior in all respects to similar products. First, users can have a free trial of F5CAB1 test prep, to help users better understand the F5CAB1 Study Guide. If the user discovers that the product is not appropriate for him, the user can choose another type of learning material. Respect the user's choice, will not impose the user must purchase the F5CAB1 practice materials. We can meet all the requirements of the user as much as possible, to help users better pass the qualifying exams.

F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which command will display the current active volume on a BIG-IP system?

- A. tmsh show sys version
- B. tmsh show sys software status
- C. tmsh list sys software update

Answer: B

Explanation:

To identify which boot volume is currently active on a BIG-IP system, the correct command is:

tmsh show sys software status

This command displays:

- * All installed boot volumes (HD1.1, HD1.2, HD1.3, etc.)
- * The BIG-IP software version installed on each volume
- * The Active field, indicating which volume the system is currently booted from
- * The installation status ("complete", "in-progress", "allowed")

This is the standard and authoritative way to determine the active boot location.

Why the other options are incorrect:

A). tmsh show sys version

- * Displays OS version, build, and date.
- * Does not show boot locations or which volume is active.

C). tmsh list sys software update

- * Shows software update configurations, not boot volume status.
- * Does not display which volume is active.

NEW QUESTION # 32

A BIG-IP Administrator needs to purchase new licenses for a BIG-IP appliance.

The administrator needs to know:

- * Whether a module is licensed
- * The memory requirement for that module

Where should the administrator view this information in the System menu?

- A. Configuration OVSDb
- **B. Resource Provisioning**
- C. Software Management
- D. Configuration Device

Answer: B

Explanation:

To understand:

- * Which modules are licensed
- * Which modules are provisioned
- * The resource requirements (CPU / RAM) of each module

The administrator uses:

System Resource Provisioning

This page displays:

- * All modules present in the license
- * Whether they are enabled or disabled
- * Required memory to activate each module
- * CPU and disk allocation information
- * Provisioning level options (None / Minimal / Nominal / Dedicated)

This is the exact location where BIG-IP administrators evaluate module capacity before enabling or purchasing licensing upgrades.

Why the other options are incorrect:

A). Configuration OVSDb

- * Used for network virtualization integrations, not licenses or modules.

B). Software Management

- * Used for software image installation, not licensing.

C). Configuration Device

- * Displays hostname, failover settings, device properties - not module resource requirements.

Thus, module licensing and memory requirement data are found under Resource Provisioning.

NEW QUESTION # 33

How should a BIG-IP Administrator check the provisioned CPU percent for a module?

(Choose two.)

- **A. By running `tmsh show /sys provision` and reviewing the specific module in the output.**

- B. By running `tmsh show /sys cpu` and reviewing the specific module provisioned output.
- C. By running `top` command and reviewing the output for the provisioned module.
- D. By going to **System / Resource Provisioning** and hovering over the CPU section colors.
- E. By checking the **Dashboard** output in the Statistics tab in the GUI.

Answer: A,D

Explanation:

BIG-IP allocates CPU and memory resources based on module provisioning levels.

To view how much CPU a module is assigned, administrators must check provisioning information from:

C). GUI - System Resource Provisioning

This page visually displays CPU allocation via color-coded bars.

Hovering over the CPU bar shows:

- * CPU usage percent per module
- * Which modules share CPU cycles
- * The system's total resource allocation

This is the primary GUI method.

D). `tmsh show /sys provision`

This command displays detailed module provisioning information including:

- * Provisioned modules
- * Their provisioning level
- * CPU and memory allocation data

It is the authoritative CLI method for resource provisioning status.

Why the other options are incorrect:

A). `top`

- * Shows real-time process usage, not provisioned CPU allocation.

B). `tmsh show /sys cpu`

- * Displays CPU runtime utilization, not per-module provisioning.

E). Statistics Dashboard

- * Only shows traffic / system runtime metrics, not provisioning resource allocations.

Therefore, C and D are correct.

NEW QUESTION # 34

Refer to the exhibit.

The screenshot shows the Configuration page for a Self Data Partition. The configuration details are as follows:

| Name | Self_data | | | | | | | | | |
|--|---|----------|-----|----------|-----|--|--|----|--|--|
| Partition / Path | Common | | | | | | | | | |
| IP Address | 10.53.1.245 | | | | | | | | | |
| Netmask | 255.255.255.0 | | | | | | | | | |
| VLAN / Tunnel | Data | | | | | | | | | |
| Port Lockdown | Allow Custom | | | | | | | | | |
| <input checked="" type="radio"/> TCP <input type="radio"/> UDP <input type="radio"/> Protocol: <input type="radio"/> All <input type="radio"/> None <input checked="" type="radio"/> Port: <input type="text"/> Add | | | | | | | | | | |
| <table border="1"> <thead> <tr> <th>TCP</th> <th>UDP</th> <th>Protocol</th> </tr> </thead> <tbody> <tr> <td>443</td> <td></td> <td></td> </tr> <tr> <td>22</td> <td></td> <td></td> </tr> </tbody> </table> | | TCP | UDP | Protocol | 443 | | | 22 | | |
| TCP | UDP | Protocol | | | | | | | | |
| 443 | | | | | | | | | | |
| 22 | | | | | | | | | | |
| Delete | | | | | | | | | | |
| Traffic Group | <input type="checkbox"/> Inherit traffic group from current partition / path <input type="text" value="traffic-group-1 (floating)"/> | | | | | | | | | |
| Service Policy | None | | | | | | | | | |
| Update Cancel Delete | | | | | | | | | | |

What traffic will be permitted to reach the BIG-IP?

- A. Telnet
- B. FTP
- C. SSH

Answer: C

Explanation:

The exhibit shows the configuration of a Self IP with:

* Port Lockdown: Allow Custom

* A Custom List that includes the following TCP ports:

* 443

* 22

Meaning of these ports:

* TCP 443# HTTPS (TMUI - web-based management)

* TCP 22# SSH (command-line remote access)

No other TCP, UDP, or protocol entries are listed; therefore, only these two services are allowed to reach the BIG-IP via this Self IP.

Evaluating the answer choices:

Option

Service

Port

Allowed?

FTP

TCP 21

Not listed

Not allowed

SSH

TCP 22

Listed

Allowed

Telnet

TCP 23

Not listed

Not allowed

Thus, SSH is the only traffic permitted through this Self IP configuration.

NEW QUESTION # 35

A BIG-IP Administrator upgrades the BIG-IP LTM to a newer software version. After the administrator reboots into the new volume, the configuration fails to load.

Why is the configuration failing to load?

- A. The license needed to be reactivated before the upgrade.
- B. Connectivity to the DNS server failed to be established.
- C. The upgrade was performed on the standby unit.
- D. A minimum of at least two reboots is required.

Answer: A

Explanation:

When upgrading to a newer TMOS software version, BIG-IP validates whether the current license is permitted to run that version.

This is controlled by the Service Check Date in the device's license file.

If the Service Check Date is older than the minimum required for the target version:

* The system boots into the new volume,

* But fails to load the configuration,

* And will instead present messages indicating that the configuration cannot be applied due to an invalid or outdated license.

This is a well-known behavior:

An outdated license, not reactivated before upgrade, causes configuration load failure after reboot into the new software.

Why the other options are incorrect:

A). Performed on the standby unit

* Upgrading a standby unit does not cause configuration load failure.

* Standby-only upgrades are standard best practice.

C). Two reboots required

* BIG-IP does not require two reboots during an upgrade.

* One reboot into the new volume is sufficient.

D). DNS connectivity failure

* DNS connectivity does not affect configuration loading.

* DNS is only needed for automatic license activation, not for applying config at boot.

Thus, the configuration failed to load because the license was not reactivated before the upgrade, making Option B correct.

NEW QUESTION # 36

.....

The ExamsReviews guarantees their customers that if they have prepared with F5 F5CAB1 practice test, they can pass the F5 F5CAB1 certification easily. If the applicants fail to do it, they can claim their payment back according to the terms and conditions. Many candidates have prepared from the actual F5 F5CAB1 Practice Questions and rated them as the best to study for the examination and pass it in a single try with the best score.

F5CAB1 Reliable Test Questions: <https://www.examsreviews.com/F5CAB1-pass4sure-exam-review.html>

The third format of the ExamsReviews F5 F5CAB1 exam dumps is the F5CAB1 Dumps PDF, F5 Valid F5CAB1 Exam Review. Do you want to pass your exam by using the least time, If you can take the time to learn about our F5CAB1 quiz prep, I believe you will be interested in our F5CAB1 exam questions, With the simulation function, our F5CAB1 training guide is easier to understand and have more vivid explanations to help you learn more knowledge.

extends String' to mean that any actual type argument that is F5CAB1 'String' or a subclass can be passed, and you interpret ', He said he expected to be gone in a few weeks, and he was.
