Salesforce Certified MuleSoft Associate Sample Questions (Q32-Q37):

NEW QUESTION # 32

An integration team follows MuleSoft's recommended approach to full lifecycle API development. Which activity should this team perform during the API implementation phase?

- **A. Use the API specification to build the MuleSoft application**
- B. Design the API specification
- C. Use the API specification to monitor the MuleSoft application
- D. Validate the API specification

Answer: A

Explanation:

MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:

API Design:

Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.

API Implementation:

Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.

APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.

Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.

Validation and Monitoring:

Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.

Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

MuleSoft Documentation: Full Lifecycle API Management

APIKit: Building APIs with APIKit

NEW QUESTION # 33

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model, which step should the organization take to solve this problem?

- **A. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**
- B. Switch from a design-first to a code-first approach for IT development
- C. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- D. Hire more IT developers, architects, and project managers to increase IT delivery

Answer: A

Explanation:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation.

Here's a detailed explanation:

Decoupling Core IT Projects:

Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.

Benefits:

Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.

Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.

Implementation:

API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.

Outcome:

Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.

Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.

NEW QUESTION # 34

An organization is choosing between API-led connectivity and other integration approaches. According to MuleSoft, which business benefit is associated with an API-led connectivity approach using Anypoint Platform?

- A. Improved security through adoption of monolithic architectures
- B. Greater project predictability through tight coupling of systems
- C. Higher outcome repeatability through centralized development
- **D. Increased developer productivity through self-service of API assets**

Answer: D

Explanation:

API-led connectivity is an approach that emphasizes the reuse of APIs to enhance agility and productivity. Here's a detailed explanation of the associated business benefits:

Self-Service of API Assets:

Definition: API-led connectivity enables developers to discover, access, and use APIs through a centralized platform like Anypoint Exchange, promoting self-service.

Productivity: Developers can quickly find and integrate existing APIs, reducing the time and effort required to build new functionalities from scratch.

Business Benefits:

Reusability: Encourages the reuse of APIs across projects, leading to faster development cycles and reduced duplication of efforts.

Agility: Enhances the ability to respond to changing business needs by providing a flexible and modular integration framework.

Scalability: Facilitates the scaling of integration solutions as business requirements grow.

API-led Connectivity: MuleSoft API-led Connectivity

Business Benefits: Why API-led Connectivity?

NEW QUESTION # 35

CloudHub is an example of which cloud computing service model?

- A. Software as a Service (SaaS)
- **B. Platform as a Service (PaaS)**
- C. Monitoring as a Service (MaaS)
- D. Infrastructure as a Service (IaaS)

Answer: B

Explanation:

CloudHub is MuleSoft's integration platform as a service (iPaaS) offering. It provides a platform for deploying and managing integration applications in the cloud. Here's a detailed explanation:

Platform as a Service (PaaS):

Definition: PaaS provides a cloud-based environment with everything required to support the complete lifecycle of building and deploying web applications and services without the complexity of managing the underlying hardware and software layers.

CloudHub Features:

Deployment: Simplifies the deployment of Mule applications to the cloud.

Management: Provides tools for managing application performance, scaling, and monitoring.

Connectivity: Offers out-of-the-box connectors and integration capabilities for various systems and services.

Benefits:

Scalability: Automatically scales applications based on demand.

Availability: Ensures high availability and reliability with built-in disaster recovery and failover capabilities.

Security: Provides robust security features to protect data and applications.

NEW QUESTION # 36

A developer needs to discover which API specifications have been created within the organization before starting a new project. Which Anypoint Platform component can the developer use to find and try out the currently released API specifications?

- A. Object Store
- B. Runtime Manager
- C. API Manager
- D. Anypoint Exchange

Answer: D

Explanation:

When a developer needs to discover which API specifications have been created within the organization before starting a new project, Anypoint Exchange is the component to use. Here's a detailed explanation:

Anypoint Exchange:

Purpose: Provides a centralized repository where developers can find and access API specifications, connectors, templates, and other reusable assets.

API Specifications: Developers can search for API specifications defined using RAML or OAS, review their details, and try them out using provided mock services.

Capabilities:

Search and Discovery: Easily search for and discover existing API specifications within the organization.

Try Out APIs: Provides tools to interact with and test APIs directly from the Exchange, allowing developers to understand the API's functionality and behavior.

Documentation: Access detailed documentation and examples for each API specification.

MuleSoft Documentation: Anypoint Exchange
