## Why do you need to trust TestValid C-S4CPB-2502 Exam Practice Questions?

You can easily use the PDF format on your tablets, laptops, and smartphones. It means you can save your free time and read Actual C-S4CPB-2502 PDF Questions from any place. So, get PDF questions, study it properly and have faith in yourself. You can reach new heights and prove yourself to those who used to think that you are not worth competing with them.

## SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q61-Q66):

### NEW QUESTION # 61

Where are the manual test cases created for customer User Acceptance Testing?

- A. SAP Signavio Process Navigator
- B. SAP Solution Manager
- C. SAP Cloud ALM
- D. Test Automation Tool

Answer: C

### NEW QUESTION # 62

What defines the organizational entities that are required in SAP Central Business Configuration?

Note:

There are 2 correct answers to this question

- A. The selected scope
- B. The selected deployment target
- C. Added partner content
- D. System consistency checks

**Answer: A,B**

Explanation:

The organizational entities that are required in SAP Central Business Configuration are defined by the selected deployment target and the selected scope. The deployment target specifies which SAP cloud solutions are included in the project, such as SAP S/4HANA Cloud, public edition. The scope specifies which business processes and countries/regions are included in the project, such as sales or professional services.

These choices determine which organizational units are required to run the underlying processes, such as company, business residence, sales organization, or project unit. Added partner content and system consistency checks do not define the organizational entities, but rather enhance or validate the configuration. References = SAP Central Business Configuration - Overview, page 5; Introducing SAP Central Business Configuration In SAP Central Business Configuration, the organizational entities that need to be defined for an SAP S

/4HANA Cloud Public Edition implementation are influenced by two primary factors: the selected deployment target and the selected scope. The deployment target refers to the specific environment or system where SAP S/4HANA Cloud will be implemented. This choice can affect which organizational entities are necessary based on the technical and business requirements of that environment. The selected scope, on the other hand, pertains to the business processes and functions that the company intends to use within SAP S

/4HANA Cloud. This determines the organizational structures, such as company codes, sales organizations, and purchasing organizations, that need to be set up to support the scoped processes. Both factors are integral to ensuring that the configuration supports the business's operational needs and strategic objectives.

### NEW QUESTION # 63

If a customer wants to develop their own custom application and integrate it with SAP S/4HANA Cloud Public Edition, what tools would you recommend to develop the app? Note: There are 2 correct answers to this question.

- A. SAP Cloud Portal Service
- B. SAP Build
- C. SAP HANA Cloud
- D. SAP Business Application Studio

**Answer: B,D**

Explanation:

SAP Business Application Studio and SAP Build are two tools that enable customers to develop their own custom applications and integrate them with SAP S/4HANA Cloud Public Edition. SAP Business Application Studio is a cloud-based development environment that offers both low-code and full-stack development capabilities. It supports various SAP technologies and frameworks, such as SAP Fiori, SAPUI5, SAP Cloud Application Programming Model, and SAP Cloud SDK. SAP Build is a cloud-based prototyping and user research tool that helps customers to design and test user interfaces for their applications. It provides a drag- and-drop interface, a library of UI components, and integration with SAP Web IDE and SAP Fiori Launchpad. Both tools are part of the SAP Extension Suite, which provides a range of services and capabilities to extend SAP applications and processes. References = Create a SAP Fiori App and Deploy it to SAP S/4HANA Cloud > Create a SAP Fiori App and Deploy it to SAP S/4HANA Cloud. Create a SAP Fiori App and Deploy it to SAP S/4HANA Cloud > Create a SAP Fiori App and Deploy it to SAP S/4HANA Cloud. Low-code/No-code | SAP Developers.

### NEW QUESTION # 64

Which of the following requirements need to be documented in SAP Cloud ALM during the Fit-to-Standard workshops? Note: There are 2 correct answers to this question.

- A. A business role restriction

- B. A configuration value
- C. A process flow diagram
- D. An SAP Fiori app customization

**Answer: B,C**

#### NEW QUESTION # 65

Which of the following systems are used to implement SAP S/4HANA Cloud Public Edition for a customer?

Note: There are 3 correct answers to this question.

- A. Trial system
- B. Test system
- C. Starter system
- D. Development system
- E. Sandbox system

**Answer: B,C,E**

Explanation:

\* Sandbox system: This is an optional system that can be used to explore the SAP S/4HANA Cloud Public Edition capabilities and features before the implementation project starts. It is not connected to the starter system or the test system and does not have any data migration or configuration tools. It can be refreshed on demand by the customer1.

\* Starter system: This is the first system that is provisioned for the customer after the contract is signed.

It is used to perform the fit-to-standard workshops, where the customer validates the standard processes and identifies the gaps and requirements. It also serves as the configuration system, where the customer configures the business processes using the SAP Central Business Configuration tool. The starter system is connected to the test system and can transfer the configuration and master data to it2.

\* Test system: This is the second system that is provisioned for the customer after the starter system is configured. It is used to perform the integration testing, user acceptance testing, data migration, and cutover activities. It also serves as the production system, where the customer runs the live business processes after the go-live. The test system is connected to the starter system and can receive the configuration and master data from it3.

The systems that are not used to implement SAP S/4HANA Cloud Public Edition for a customer are:

\* Trial system: This is a system that can be used to experience the SAP S/4HANA Cloud Public Edition solution for a limited time. It is not connected to any other system and does not have any data migration or configuration tools. It is not part of the implementation project and does not require a contract4.

\* Development system: This is a system that can be used to develop custom applications or extensions using the SAP Business Technology Platform. It is not part of the SAP S/4HANA Cloud Public Edition landscape and does not have any data migration or configuration tools. It requires a separate contract and license.
